PUBLISHER'S ADVERTISEMENT.

The autobiography of Dr Franklin narrates his life till 1757, when he was in his 51st year. This is contained in the following volume, together with a continuation, by another hand, of the history of his remarkable career till his death.

It is a singular fact, that the original autobiography of Franklin has been but comparatively little circulated, though numerous professed editions of his life, as written by himself, have been widely published. He commenced his autobiography while on a visit to the Bishop of St. Asaph's, in 1772, and added to it from time to time while in England; as his leisure would permit. After he had taken up his residence at the Court of Versailles, as Minister Plenipotentiary from the United States, he continued his narration to a still later period in his life. The favor with which he was regarded by the higher circles in France, led to the publication there of a translation of his autobiography. This has been re-translated in English, and widely circulated in England and the United States as the original work. The translation

PUBLISHER'S ADVERTISEMENT.

failed to preserve the freshness and charming ease which characterized the narrative as it originally flowed from the author's pen, and the publishers of the present edition believe that they are rendering an acceptable service to the reading public, by offering them this, the original autobiography.

It is believed that the value of the work has been much enhanced, by appending a selection of some of the best of Franklin's inimitable essays.

CONTENTS.

CHAPTER I.

	PAGE.
THE FAMILY OF BENJAMIN FRANKLIN — His Birth and early Boyhood — Character of his Father — Epitaph on his Parents — His early fondness for reading — Apprenticed to his Brother to learn the Printer's Trade — Efforts for intellectual improvement — Practices writing Ballads and Composition — Intimacy with Collins — Adopts a vegetable Diet — Disputations — Publishes a Newspaper — Disagrees with his Brother — Leaves Boston and starts for New York, - - - - -	9

CHAPTER II.

Franklin goes to Philadelphia — Incidents on the way — His first appearance there — Seeks for Employment — Commences work at his Trade — Acquaintances formed — Interview with Sir William Keith, Governor of Pennsylvania, who proposes to set him up in Business — Returns to Boston to consult his Father respecting the plan — His Father disapproves of it and he returns to Philadelphia — Meets his friend Collins — His associates — Governor Keith advises him to visit England, - - -	30
---	----

CHAPTER III.

Sails for London — Finds that he has been deceived by Keith — His destitution — Finds work as a Printer at Palmer's, in Bartholomew Close — Writes and Prints a Metaphysical Tract — His companions in London — Removes to Watts' Printing House, near Lincoln's Inn Fields — His Expenses of living — Habits of his Fellow Workmen — Enters into Mercantile Business — His feats of swimming procure him an interview with Sir William Windham, - - - - -	51
--	----

C O N T E N T S .

C H A P T E R I V .

	PAGE.
Returns to America — His mercantile plans defeated by the death of his partner — Returns again to Printing — His description of the Workmen in the Printing House — Determines to commence business on his own account — He gives his views upon the subject of Religion — Account of his London Pamphlet — Forms a Partnership with Hugh Meredith in the Printing Business, - - - - -	63

C H A P T E R V .

The Junto Club — Its original Members — Franklin's great industry — He writes the "Busy Body" — Establishes a Newspaper — Partnership with Meredith dissolved — Writes a Tract on the Necessity of a Paper Currency — Its reception — He opens a Stationer's Shop — Prosperity of his Business — His Courtship and Marriage — His first project of a public nature, -	73
---	----

C H A P T E R V I .

Result of this project — Foundation of the Philadelphia Library — Mode of obtaining subscriptions — Success — The Silver Spoon and China Bowl — Remarks on Preaching — Religious and Moral Sentiments — His method for self examination and discipline — Division of time and occupation of each hour — Anecdote — Proposes a Treatise on the Art of Virtue, - - -	86
--	----

C H A P T E R V I I .

Plan for raising a "United Party for Virtue" — The intended creed for this party — Poor Richard's Almanac — Rules for conducting a Newspaper — Engages in a controversy in behalf of Hemphill, a Preacher — Studies the French, Italian, and Spanish Languages — Visits Boston — Death of one of his sons — Widening influence of the Junto — Chosen Clerk of the General Assembly — Appointed Postmaster of Philadelphia — Suggests Improvements in the City Watch — Establishes a Fire Company, - - - - -	102
---	-----

L I F E

OF

BENJAMIN FRANKLIN

WRITTEN BY HIMSELF.

CHAPTER I.

I HAVE ever had a pleasure in obtaining any little anecdotes of my ancestors. You may remember the inquiries I made among the remains of my relations, when you were with me in England, and the journey I undertook for that purpose. Imagining it may be equally agreeable to you to learn the circumstances of *my* life, many of which you are acquainted with, and expecting the enjoyment of a few weeks' uninterrupted leisure, I sit down to write them. Besides, there are some other inducements that excite me to this undertaking. From the poverty and obscurity in which I was born, and in which I passed my earliest years, I have raised myself to a state of affluence and some degree of celebrity in the world. As constant good fortune has accompanied me even to an advanced period of life, my posterity will perhaps be desirous of learning the means, which I employed, and which, thanks to Providence, so well succeeded with me. They may also deem them fit to be imitated, should any of them find themselves in similar circumstances.

This good fortune, when I reflect on it, which is frequently the case, has induced me sometimes to say, that, if it were left to my choice, I should have no objection to go over the same life from its beginning to the end; requesting only the advantage authors have of correcting in a second edition the faults of the first. So would I also wish to change some incidents of it, for others more favorable. Notwithstanding, if this condition was denied, I should still accept the offer of re-commencing the same life. But as this repetition is not to be expected, that, which resembles most living one's life over again, seems to be to recall all the circumstances of it; and, to render this remembrance more durable, to record them in writing.

In thus employing myself I shall yield to the inclination, so natural to old men, of talking of themselves and their own actions; and I shall indulge it without being tiresome to those, who, from respect to my age, might conceive themselves obliged to listen to me, since they will be always free to read me or not. And, lastly, (I may as well confess it, as the denial of it would be believed by nobody,) I shall perhaps not a little gratify my own vanity. Indeed, I never heard or saw the introductory words, "Without vanity I may say," &c., but some vain thing immediately followed. Most people dislike vanity in others, whatever share they have of it themselves; but I give it fair quarter wherever I meet with it, being persuaded, that it is often productive of good to the possessor, and to others who are within his sphere of action; and therefore in many cases it would not be altogether absurd, if a man were to thank God for his *vanity* among the other comforts of life.

And now I speak of thanking God, I desire with all humility to acknowledge, that I attribute the mentioned happiness of my past life to His divine providence, which led to the means I used, and gave the success. My belief of this induces me to *hope*, though I must not *presume*, that the same goodness will still be exercised towards me in continuing that happiness,

or enabling me to bear a fatal reverse, which I may experience as others have done; the complexion of my future fortune being known to Him only, in whose power it is to bless us, even in our afflictions.

Some notes, which one of my uncles, who had the same curiosity in collecting family anecdotes, once put into my hands, furnished me with several particulars relative to our ancestors. From these notes I learned, that they lived in the same village, Ecton, in Northamptonshire, on a freehold of about thirty acres, for at least three hundred years, and how much longer could not be ascertained.

This small estate would not have sufficed for their maintenance, without the business of a smith, which had continued in the family down to my uncle's time, the eldest son being always brought up to that employment; a custom which he and my father followed with regard to their eldest sons. When I searched the registers at Ecton, I found an account of their marriages and burials from the year 1555 only, as the registers kept did not commence previous thereto. I however learned from it, that I was the youngest son of the youngest son for five generations back. My grandfather, Thomas, who was born in 1598, lived at Ecton, till he was too old to continue his business, when he retired to Banbury in Oxfordshire, to the house of his son John, with whom my father served an apprenticeship. There my uncle died and lies buried. We saw his gravestone in 1758. His eldest son Thomas lived in the house at Ecton, and left it, with the land, to his only daughter, who, with her husband, one Fisher of Wellingborough, sold it to Mr. Isted, now lord of the manor there. My grandfather had four sons, who grew up; viz. Thomas, John, Benjamin, and Josiah. Being at a distance from my papers, I will give you what account I can of them from memory; and, if my papers are not lost in my absence, you will find among them many more particulars.

Thomas, my eldest uncle, was bred a smith under his father, but, being ingenious and encouraged in learning, as all his brothers were, by an Esquire Palmer, then the principal inhabitant of that parish, he qualified himself for the bar, and became a considerable man in the county; was chief mover of all public-spirited enterprises for the county or town of Northampton, as well as of his own village, of which many instances were related of him; and he was much taken notice of and patronized by Lord Halifax. He died in 1702, the 6th of January; four years to a day before I was born. The recital, which some elderly persons made to us of his character, I remember struck you as something extraordinary, from its similarity with what you knew of me. "Had he died," said you, "four years later, on the same day, one might have supposed a transmigration."

John, my next uncle, was bred a dyer, I believe of wool. Benjamin was bred a silk dyer, serving an apprenticeship in London. He was an ingenious man. I remember, when I was a boy, he came to my father's in Boston, and resided in the house with us for several years. There was always a particular affection between my father and him, and I was his godson. He lived to a great age. He left behind him two quarto volumes of manuscript, of his own poetry, consisting of fugitive pieces addressed to his friends. He had invented a short-hand of his own, which he taught me, but, not having practised it, I have now forgotten it. He was very pious, and an assiduous attendant at the sermons of the best preachers, which he reduced to writing according to his method, and had thus collected several volumes of them.

He was also a good deal of a politician; too much so, perhaps, for his station. There fell lately into my hands, in London, a collection he had made of all the principal political pamphlets relating to public affairs, from the year 1641 to 1717. Many of the volumes are wanting, as appears by their numbering, but there still remain eight volumes in folio, and twenty in quarto

and in octavo. A dealer in old books had met with them, and knowing me by name, having bought books of him, he brought them to me. It would appear that my uncle must have left them here, when he went to America, which was about fifty years ago. I found several of his notes in the margins. His grandson, Samuel Franklin, is still living in Boston.

Our humble family early embraced the reformed religion. Our forefathers continued Protestants through the reign of Mary, when they were sometimes in danger of persecution, on account of their zeal against Popery. They had an English Bible, and, to conceal it and place it in safety, it was fastened open with tapes under and within the cover of a joint stool. When my great-grandfather wished to read it to his family, he placed the joint stool on his knees, and then turned over the leaves under the tapes. One of the children stood at the door to give notice if he saw the apparitor coming, who was an officer of the spiritual court. In that case the stool was turned down again upon its feet, when the Bible remained concealed under it as before. This anecdote I had from uncle Benjamin. The family continued all of the church of England, till about the end of Charles the Second's reign, when some of the ministers that had been outed for their non-conformity, holding conventicles in Northamptonshire, my uncle Benjamin and my father Josiah adhered to them, and so continued all their lives. The rest of the family remained with the Episcopal church.

My father married young, and carried his wife with three children to New England, about 1685. The conventicles being at that time forbidden by law, and frequently disturbed in the meetings, some considerable men of his acquaintances determined to go to that country, and he was prevailed with to accompany them thither, where they expected to enjoy the exercise of their religion with freedom. By the same wife my father had four children more born there, and by a second, ten others; in all seventeen; of whom I re-

member to have seen thirteen sitting together at his table; who all grew up to years of maturity and were married. I was the youngest son, and the youngest of all the children except two daughters. I was born in Boston, in New England. My mother, the second wife of my father, was Abiah Folger, daughter of Peter Folger, one of the first settlers of New England; of whom honorable mention is made by Cotton Mather in his ecclesiastical history of that country, entitled *Magnalia Christi Americana*, as "a godly and learned Englishman," if I remember the words rightly. I was informed, he wrote several small occasional works, but only one of them was printed, which I remember to have seen several years since. It was written in 1675. It was in familiar verse, according to the taste of the times and people; and addressed to the government there. It asserts the liberty of conscience, in behalf of the Anabaptists, the Quakers, and other sectaries, that had been persecuted. He attributes to this persecution the Indian wars, and other calamities that had befallen the country; regarding them as so many judgments of God to punish so heinous an offence, and exhorting the repeal of those laws, so contrary to charity. This piece appeared to me as written with manly freedom, and a pleasing simplicity. The six last lines I remember, but have forgotten the preceding ones of the stanza; the purport of them was, that his censures proceeded from good will, and therefore he would be known to be the author.

"Because to be a libeller
I hate it with my heart.
From Sherbon Town where now I dwell,
My name I do put here;
Without offence your real friend,
It is Peter Folger."

My elder brothers were all put apprentices to different trades. I was put to the grammar school at eight years of age; my father intending to devote me, as the tythe of his sons, to the service of the church. My early readiness in learning to read, which must

have been very early, as I do not remember when I could not read, and the opinion of all his friends, that I should certainly make a good scholar, encouraged him in this purpose of his. My uncle Benjamin too approved of it, and proposed to give me his short hand volumes of sermons, to set up with, if I would learn his short hand. I continued, however, at the grammar school rather less than a year, though in that time I had risen gradually from the middle of the class of that year, to be at the head of the same class, and was removed into the next class, whence I was to be placed in the third at the end of the year.

But my father, burdened with a numerous family, was unable without inconvenience to support the expense of a college education. Considering, moreover, as he said to one of his friends in my presence, the little encouragement that line of life afforded to those educated for it, he gave up his first intentions, took me from the grammar school, and sent me to a school for writing and arithmetic, kept by a then famous man, Mr. George Brownwell. He was a skilfull master, and successful in his profession, employing the mildest and most encouraging methods. Under him I learned to write a good hand pretty soon; but I failed entirely in arithmetic. At ten years old I was taken to help my father in his business, which was that of a tallow-chandler and soap-boiler; a business to which he was not bred, but had assumed on his arrival in New England, because he found that his dyeing trade, being in little request, would not maintain his family. Accordingly, I was employed in cutting wicks for the candles, filling the moulds for cast candles, attending the shop, going of errands, &c.

I disliked the trade, and had a strong inclination to go to sea; but my father declared against it. But, residing near the water, I was much in it and on it. I learned to swim well, and to manage boats; and, when embarked with other boys, I was commonly allowed to govern, especially in any case of difficulty; and upon other occasions I was generally the leader

among the boys, and sometimes led them into scrapes, of which I will mention one instance, as it shows an early projecting public spirit, though not then justly conducted. There was a salt marsh, which bounded part of the mill-pond, on the edge of which, at high water, we used to stand to fish for minnows. By much trampling we had made it a mere quagmire. My proposal was to build a wharf there for us to stand upon, and I showed my comrades a large heap of stones, which were intended for a new house near the marsh, and which would very well suit our purpose. Accordingly in the evening, when the workmen were gone home, I assembled a number of my playfellows, and we worked diligently, like so many emmets, sometimes two or three to a stone, till we brought them all to make our little wharf. The next morning, the workmen were surprised at missing the stones, which had formed our wharf. Inquiry was made after the authors of this transfer; we were discovered, complained of, and corrected by our fathers; and, though I demonstrated the utility of our work, mine convinced me, that that which was not honest, could not be truly useful.

I suppose you may like to know what kind of a man my father was. He had an excellent constitution, was of a middle stature, well set, and very strong. He could draw prettily, and was skilled a little in music. His voice was sonorous and agreeable, so that when he played on his violin, and sung withal, as he was accustomed to do after the business of the day was over, it was extremely agreeable to hear. He had some knowledge of mechanics, and on occasion was very handy with other tradesmen's tools. But his great excellence was his sound understanding, and his solid judgment in prudential matters, both in private and public affairs. It is true he was never employed in the latter, the numerous family he had to educate, and the straitness of his circumstances, keeping him close to his trade; but I remember well his being frequently visited by leading men, who con-

sulted him for his opinion in public affairs, and those of the church he belonged to; and who showed a great respect for his judgment and advice.

He was also much consulted by private persons about their affairs, when any difficulty occurred, and frequently chosen an arbitrator between contending parties. At his table he liked to have, as often as he could, some sensible friend or neighbor to converse with, and always took care to start some ingenious or useful topic for discourse, which might tend to improve the minds of his children. By this means he turned our attention to what was good, just, and prudent, in the conduct of life; and little or no notice was ever taken of what related to the victuals on the table; whether it was well or ill dressed, in or out of season, of good or bad flavor, preferable or inferior to this or that other thing of the kind; so that I was brought up in such a perfect inattention to those matters, as to be quite indifferent what kind of food was set before me. Indeed, I am so unobservant of it, that to this day I can scarce tell a few hours after dinner of what dishes it consisted. This has been a great convenience to me in travelling, where my companions have been sometimes very unhappy for want of a suitable gratification of their more delicate, because better instructed, tastes and appetites.

My mother had likewise an excellent constitution; she suckled all her ten children. I never knew either my father or mother to have any sickness, but that of which they died; he at eighty-nine, and she at eighty-five years of age. They lie buried

together at Boston, where I some years since placed a marble over their grave, with this inscription ;

JOSIAH FRANKLIN

and

ABIAH his wife,

Lie here interred.

They lived lovingly together in wedlock,

Fifty-five years ;

And without an estate, or any gainful employmen',

By constant labor, and honest industry,

(With God's blessing,)

Maintained a large family comfortably ,

And brought up thirteen children and seven grandchildren

Reputably.

From this instance, reader,

Be encouraged to diligence in thy calling,

And distrust not Providence.

He was a pious and prudent man,

She a discreet and virtuous woman

Their youngest son,

In filial regard to their memory,

Places this stone.

J. F. born 1655 ; died 1744. *Æt.* 89.

A. F. born 1667 ; died 1752. *Æt.* 85.

By my rambling digressions, I perceive myself to be grown old. I used to write more methodically. But one does not dress for private company as for a public ball. Perhaps it is only negligence.

To return ; I continued thus employed in my father's business for two years, that is, till I was twelve years old ; and, my brother John, who was bred to that business, having left my father, married, and set up for himself at Rhode Island, there was every appearance that I was destined to supply his place, and become a tallow-chandler. But my dislike to the trade continuing, my father had apprehensions, that, if he did not put me to one more agreeable, I should break loose and go to sea, as my brother Josiah had done, to his great vexation. In consequence, he took me to walk with him and see joiners, bricklayers, turners, braziers, &c., at their work, that he might observe my inclination, and endeavor to fix it on some trade or profession that would keep me on land. It has ever since been a pleasure to me to see good workmen handle their tools. And it has been

often useful to me, to have learned so much by it, as to be able to do some trifling jobs in the house when a workman was not at hand, and to construct little machines for my experiments, at the moment when the intention of making these was warm in my mind. My father determined at last for the cutler's trade, and placed me for some days on trial with Samuel, son to my uncle Benjamin, who was bred to that trade in London, and had just established himself in Boston. But the sum he exacted as a fee for my apprenticeship displeased my father, and I was taken home again.

From my infancy I was passionately fond of reading, and all the money that came into my hands was laid out in the purchasing of books. I was very fond of voyages. My first acquisition was Bunyan's works in separate little volumes. I afterwards sold them to enable me to buy R. Burton's *Historical Collections*. They were small chapmen's books, and cheap; forty volumes in all. My father's little library consisted chiefly of books in polemic divinity, most of which I read. I have often regretted, that, at a time when I had such a thirst for knowledge, more proper books had not fallen in my way, since it was resolved I should not be bred to divinity. There was among them Plutarch's *Lives*, which I read abundantly, and I still think that time spent to great advantage. There was also a book of Defoe's, called *An Essay on Projects*, and another of Dr. Mather's, called *An Essay to do Good*, which perhaps gave me a turn of thinking, that had an influence on some of the principal future events of my life.

This bookish inclination at length determined my father to make me a printer, though he had already one son, James, of that profession. In 1717 my brother James returned from England with a press and letters, to set up his business in Boston. I liked it much better than that of my father, but still had a hankering for the sea. To prevent the apprehended effect of such an inclination, my father

was impatient to have me bound to my brother. I stood out some time, but at last was persuaded, and signed the indenture, when I was yet but twelve years old. I was to serve an apprenticeship till I was twenty-one years of age, only I was to be allowed journeyman's wages during the last year. In a little time I made a great progress in the business, and became a useful hand to my brother. I now had access to better books. An acquaintance with the apprentices of booksellers enabled me sometimes to borrow a small one, which I was careful to return soon, and clean. Often I sat up in my chamber reading the greatest part of the night, when the book was borrowed in the evening and to be returned in the morning, lest it should be found missing.

After some time a merchant, an ingenious, sensible man, Mr. Matthew Adams, who had a pretty collection of books, frequented our printing office, took notice of me, and invited me to see his library, and very kindly proposed to lend me such books, as I chose to read. I now took a strong inclination for poetry, and wrote some little pieces. My brother, supposing it might turn to account, encouraged me, and induced me to compose two occasional ballads. One was called *The Light House Tragedy*, and contained an account of the shipwreck of Captain Worthilake with his two daughters; the other was a sailor's song, on the taking of the famous *Teach*, or *Blackbeard*, the pirate. They were wretched stuff, in street-ballad style; and when they were printed, my brother sent me about the town to sell them. The first sold prodigiously, the event being recent, and having made a great noise. This success flattered my vanity; but my father discouraged me by criticising my performances, and telling me verse-makers were generally beggars. Thus I escaped being a poet, and probably a very bad one; but, as prose writing has been of great use to me in the course of my life, and was a principal means

of my advancement, I shall tell you how, in such a situation, I acquired what little ability I may be supposed to have in that way.

There was another bookish lad in the town, John Collins by name, with whom I was intimately acquainted. We sometimes disputed, and very fond we were of argument, and very desirous of confuting one another; which disputations turn, by the way, is apt to become a very bad habit, making people often extremely disagreeable in company, by the contradiction that is necessary to bring it into practice; and thence, besides souring and spoiling the conversation, it is productive of disgusts and perhaps enmities with those, who may have occasion for friendship. I had caught this by reading my father's books of dispute on religion. Persons of good sense, I have since observed, seldom fall into it, except lawyers, university men, and, generally, men of all sorts, who have been bred at Edinburgh.

A question was once, somehow or other, started between Collins and me, on the propriety of educating the female sex in learning, and their abilities for study. He was of opinion that it was improper, and that they were naturally unequal to it. I took the contrary side, perhaps a little for dispute's sake. He was naturally more eloquent, having a greater plenty of words, and sometimes, as I thought, I was vanquished more by his fluency than by the strength of his reasons. As we parted without settling the point, and were not to see one another again for some time, I sat down to put my arguments in writing, which I copied fair and sent to him. He answered, and I replied. Three or four letters on a side had passed, when my father happened to find my papers and read them. Without entering into the subject in dispute, he took occasion to talk to me about my manner of writing; observed, that though I had the advantage of my antagonist in correct spelling and pointing, (which he attributed to the printing-house,) I fell far short in elegance

of expression, in method, and in perspicuity, of which he convinced me by several instances. I saw the justice of his remarks, and thence grew more attentive to my manner of writing, and determined to endeavor to improve my style.

About this time, I met with an odd volume of the *Spectator*. I had never before seen any of them. I bought it, read it over and over, and was much delighted with it. I thought the writing excellent, and wished if possible to imitate it. With that view, I took some of the papers, and making short hints of the sentiments in each sentence, laid them by a few days, and then, without looking at the book, tried to complete the papers again, by expressing each hinted sentiment at length, and as fully as it had been expressed before, in any suitable words that should occur to me. Then I compared my *Spectator* with the original, discovered some of my faults, and corrected them. But I found I wanted a stock of words, or a readiness in recollecting and using them, which I thought I should have acquired before that time, if I had gone on making verses; since the continued search for words of the same import, but of different length to suit the measure, or of different sound for the rhyme, would have laid me under a constant necessity of searching for variety, and also have tended to fix that variety in my mind, and make me master of it. Therefore I took some of the tales in the *Spectator*, and turned them into verse; and, after a time, when I had pretty well forgotten the prose, turned them back again.

I also sometimes jumbled my collection of hints into confusion, and after some weeks endeavored to reduce them into the best order, before I began to form the full sentences and complete the subject. This was to teach me method in the arrangement of the thoughts. By comparing my work with the original, I discovered many faults, and corrected them; but I sometimes had the pleasure to fancy, that, in certain particulars

of small consequence, I had been fortunate enough to improve the method or the language, and this encouraged me to think, that I might in time come to be a tolerable English writer; of which I was extremely ambitious. The time I allotted for writing exercises, and for reading, was at night, or before work began in the morning, or on Sundays, when I contrived to be in the printing house, avoiding as much as I could the constant attendance at public worship, which my father used to exact of me when I was under his care, and which I still continued to consider a duty, though I could not afford time to practise it.

When about sixteen years of age, I happened to meet with a book, written by one Tryon, recommending a vegetable diet. I determined to go into it. My brother, being yet unmarried, did not keep house, but boarded himself and his apprentices in another family. My refusing to eat flesh occasioned an inconvenience, and I was frequently chid for my singularity. I made myself acquainted with Tryon's manner of preparing some of his dishes, such as boiling potatoes or rice, making hasty-pudding and a few others, and then proposed to my brother, that if he would give me weekly half the money he paid for my board, I would board myself. He instantly agreed to it, and I presently found that I could save half what he paid me. This was an additional fund for buying of books; but I had another advantage in it. My brother and the rest going from the printing house to their meals, I remained there alone, and, dispatching presently my light repast (which was often no more than a biscuit, or a slice of bread, a handful of raisins, or a tart from the pastry cook's, and a glass of water,) had the rest of the time, till their return, for study; in which I made the greater progress from that greater clearness of head, and quicker apprehension, which generally attend temperance in eating and drinking. Now it was, that, being on some occasion made ashamed of my ignorance in figures, which I had twice failed learning when at school, I took Cocker's book on

Arithmetic, and went through the whole by myself with the greatest ease. I also read Seller's and Sturmy's book on *Navigation*, which made me acquainted with the little geometry it contains, but I never proceeded far in that science. I read about this time Locke on *Human Understanding*, and *The Art of Thinking*, by Messrs. de Port-Royal.

While I was intent upon improving my language, I met with an English grammar (I think it was Greenwood's,) having at the end of it two little sketches on the Arts of Rhetoric and Logic, the latter finishing with a dispute in the Socratic method. And, soon after, I procured Xenophen's *Memorable Things of Socrates*, wherein there are many examples of the same method. I was charmed with it, adopted it, dropped my abrupt contradiction and positive argumentation, and put on the humble inquirer. And being then, from reading Shaftesbury and Collins, made a doubter, as I already was in many points of our religious doctrines, I found this method the safest for myself, and very embarrassing to those against whom I used it; therefore I took delight in it, practised it continually, and grew very artful and expert in drawing people, even of superior knowledge, into concessions, the consequences of which they did not foresee, entangling them in difficulties, out of which they could not extricate themselves, and so obtaining victories, that neither myself nor my cause always deserved.

I continued this method some few years, but gradually left it, retaining only the habit of expressing myself in terms of modest diffidence, never using, when I advance any thing that may possibly be disputed, the words *certainly*, *undoubtedly*, or any others that give the air of positiveness to an opinion; but rather say, *I conceive*, or *apprehend*, a thing to be so and so; *It appears to me*, or *I should not think it, so or so, for such and such reasons*; or, *I imagine it to be so*; or, *It is so, if I am not mistaken*. This habit, I believe, has been of great advantage to me, when I

have had occasion to inculcate my opinions, and persuade men into measures, that I have been from time to time engaged in promoting. And, as the chief ends of conversation are to *inform* or to *be informed*, to *please* or to *persuade*, I wish well-meaning and sensible men would not lessen their power of doing good by a positive, assuming manner, that seldom fails to disgust, tends to create opposition, and to defeat most of those purposes for which speech was given to us. In fact, if you wish to instruct others, a positive dogmatical manner in advancing your sentiments may occasion opposition, and prevent a candid attention. If you desire instruction and improvement from others, you should not, at the same time, express yourself fixed in your present opinions. Modest and sensible men, who do not love disputation, will leave you undisturbed in the possession of your errors. In adopting such a manner, you can seldom expect to please your hearers, or obtain the concurrence you desire. Pope judiciously observes

“Men must be taught, as if you taught them not,
And things unknown proposed as things forgot.”

He also recommends it to us

“To speak, though sure, with seeming diffidence.”

And he might have joined with this line, that which he has coupled with another, I think, less properly,

“For want of modesty is want of sense.”

If you ask, Why less properly? I must repeat the lines,

“Immodest words admit of no defense,
For want of modesty is want of sense.”

Now, is not the *want of sense*, where a man is so unfortunate as to want it, some apology for his *want of modesty*? And would not the lines stand more justly thus?

“Immodest words admit *but* this defense,
That want of modesty is want of sense.”

This, however, I should submit to better judgments.

My brother had, in 1720 or 1721, begun to print a

newspaper. It was the second that appeared in America, and was called the *New England Courant*. The only one before it was the *Boston News-Letter*. I remember his being dissuaded by some of his friends from the undertaking, as not likely to succeed, one newspaper being in their judgment enough for America. At this time, 1771, there are not less than five and twenty. He went on, however, with the undertaking. I was employed to carry the papers to the customers, after having worked in composing the types and printing off the sheets.

He had some ingenious men among his friends, who amused themselves by writing little pieces for this paper, which gained it credit, and made it more in demand, and these gentlemen often visited us. Hearing their conversations, and their accounts of the approbation their papers were received with, I was excited to try my hand among them. But, being still a boy, and suspecting that my brother would object to printing any thing of mine in his paper, if he knew it to be mine, I contrived to disguise my hand, and, writing an anonymous paper, I put it at night under the door of the printing house. It was found in the morning, and communicated to his writing friends when they called in as usual. They read it, commented on it in my hearing, and I had the exquisite pleasure of finding it met with their approbation, and that, in their different guesses at the author, none were named but men of some character among us for learning and ingenuity. I suppose, that I was rather lucky in my judges, and that they were not really so very good as I then believed them to be. Encouraged, however, by this attempt, I wrote and sent in the same way to the press several other pieces, that were equally approved; and I kept my secret till all my fund of sense for such performances was exhausted, and then discovered it, when I began to be considered a little more by my brother's acquaintance.

However, that did not quite please him, as he thought it tended to make too vain. This might

be one occasion of the differences we began to have about this time. Though a brother, he considered himself as my master, and me as his apprentice, and accordingly expected the same services from me as he would from another, while I thought he degraded me too much in some he required of me, who, from a brother, expected more indulgence. Our disputes were often brought before our father, and I fancy I was either generally in the right, or else a better pleader, because the judgment was generally in my favor. But my brother was passionate, and had often beaten me, which I took extremely amiss; and, thinking my apprenticeship very tedious, I was continually wishing for some opportunity of shortening it, which at length offered in a manner unexpected. Perhaps this harsh and tyrannical treatment of me might be a means of impressing me with the aversion to arbitrary power, that has stuck to me through my whole life.

One of the pieces in our newspaper on some political point, which I have now forgotten, gave offense to the Assembly. He was taken up, censured, and imprisoned for a month by the Speaker's warrant, I suppose because he would not discover the author. I, too, was taken up and examined before the Council; but, though I did not give them any satisfaction, they contented themselves with admonishing me, and dismissed me, considering me perhaps as an apprentice, who was bound to keep his master's secrets. During my brother's confinement, which I resented a good deal notwithstanding our private differences, I had the management of the paper; and I made bold to give our rulers some rubs in it, which my brother took very kindly, while others began to consider me in an unfavorable light, as a youth that had a turn for libelling and satire.

My brother's discharge was accompanied with an order, and a very odd one, that "*James Franklin* should no longer print the newspaper, called *The New England Courant*." On a consultation held in

our printing office, amongst his friends, what he should do in this conjuncture, it was proposed to elude the order by changing the name of the paper. But my brother, seeing inconveniences in this, came to a conclusion, as a better way, to let the paper in future be printed in the name of *Benjamin Franklin*; and in order to avoid the censure of the Assembly, that might fall on him, as still printing it by his apprentice, he contrived and consented that my old indenture should be returned to me with a discharge on the back of it, to show in case of necessity; and, in order to secure to him the benefit of my service, I should sign new indentures for the remainder of my time, which were to be kept private. A very flimsy scheme it was; however, it was immediately executed, and the paper was printed accordingly, under my name, for several months.

At length, a fresh difference arising between my brother and me, I took upon me to assert my freedom; presuming that he would not venture to produce the new indentures. It was not fair in me to take this advantage, and this I therefore reckon one of the first *errata* of my life; but the unfairness of it weighed little with me, when under the impressions of resentment for the blows his passion too often urged him to bestow upon me. Though he was otherwise not an ill natured man; perhaps I was too saucy and provoking.

When he found I would leave him, he took care to prevent my getting employment in any other printing house of the town, by going round and speaking to every master, who accordingly refused to give me work. I then thought of going to New York, as the nearest place where there was a printer. And I was rather inclined to leave Boston, when I reflected, that I had already made myself a little obnoxious to the governing party, and, from the arbitrary proceedings of the Assembly, in my brother's case, it was likely I might, if I stayed, soon bring myself into scrapes; and, further, that my indiscreet disputations about religion

began to make me pointed at with horror by good people, as an infidel and atheist. I concluded, therefore, to remove to New York; but my father now siding with my brother, I was sensible, that, if I attempted to go openly, means would be used to prevent me. My friend Collins, therefore, undertook to manage my flight. He agreed with the captain of a New York sloop to take me, under pretense of my being a young man of his acquaintance, that had an intrigue with a girl of bad character, whose parents would compel me to marry her, and that I could neither appear or come away publicly. I sold my books to raise a little money, was taken on board the sloop privately, had a fair wind, and in three days found myself at New York, near three hundred miles from my home, at the age of seventeen, (October, 1723,) without the least recommendation, or knowledge of any person in the place, and very little money in my pocket.

CHAPTER II.

THE inclination I had had for the sea was by this time done away, or I might now have gratified it. But having another profession, and conceiving myself a pretty good workman, I offered my services to a printer of the place, old Mr. William Bradford, who had been the first printer in Pennsylvania, but had removed thence, in consequence of a quarrel with the governor, George Keith. He could give me no employment, having little to do, and hands enough already; but he said, "My son at Philadelphia has lately lost his principal hand, Aquila Rose, by death; if you go thither, I believe he may employ you." Philadelphia was one hundred miles further; I set out, however, in a boat for Amboy, leaving my chest and things to follow me round by sea.

In crossing the bay, we met with a squall that tore our rotten sails to pieces, prevented our getting into the Kill, and drove us upon Long Island. In our way, a drunken Dutchman, who was a passenger too, fell overboard; when he was sinking, I reached through the water to his shock pate, and drew him up, so that we got him in again. His ducking sobered him a little, and he went to sleep, taking first out of his pocket a book, which he desired I would dry for him. It proved to be my old favorite author, Bunyan's *Pilgrim's Progress*, in Dutch, finely printed on good paper, copper cuts, a dress better than I had ever seen it wear in its own language. I have since found that it has been translated into most of the languages of Europe, and suppose it has been more generally read than any other book, except perhaps the Bible. Honest John was the first that I know of, who mixed

narration and dialogue; a method of writing very engaging to the reader, who in the most interesting parts finds himself, as it were, admitted into the company, and present at the conversation. Defoe has imitated him successfully in his *Robinson Crusoe*, in his *Moll Flanders*, and other pieces; and Richardson has done the same in his *Pamela*, &c.

On approaching the island, we found it was in a place where there could be no landing, there being a great surge on the stony beach. So we dropped anchor, and swung out our cable towards the shore. Some people came down to the shore and hallooed to us, as we did to them; but the wind was so high, and the surge so loud, that we could not understand each other. There were some small boats near the shore, and we made signs, and called to them to fetch us; but they either did not comprehend us, or it was impracticable, so they went off. Night approaching, we had no remedy but to have patience till the wind abated; and in the mean time the boatman and myself concluded to sleep, if we could; and so we crowded into the hatches, where we joined the Dutchman, who was still wet, and the spray, breaking over the head of our boat, leaked through to us, so that we were soon almost as wet as he. In this manner we lay all night, with very little rest; but, the wind abating the next day, we made a shift to reach Amboy before night; having been thirty hours on the water, without victuals, or any drink but a bottle of filthy rum; the water we sailed on being salt.

In the evening I found myself very feverish, and went to bed; but, having read somewhere that cold water drunk plentifully was good for a fever, I followed the proscription, and sweat plentifully most of the night. My fever left me, and in the morning, crossing the ferry, I proceeded on my journey on foot, having fifty miles to go to Burlington, where I was told, I should find boats, that would carry me the rest of the way to Philadelphia.

It rained very hard all the day; I was thoroughly soaked, and by noon a good deal tired; so I stopped at a poor inn, where I stayed all night; beginning now to wish I had never left home. I made so miserable a figure, too, that I found, by the questions asked me, I was suspected to be some runaway indentured servant, and in danger of being taken up on that suspicion. However, I proceeded next day, and got in the evening to an inn, within eight or ten miles of Burlington, kept by one Dr. Brown. He entered into conversation with me while I took some refreshment, and, finding I had read a little, became very obliging and friendly. Our acquaintance continued all the rest of his life. He had been, I imagine, an ambulatory quack doctor, for there was no town in England, nor any country in Europe, of which he could not give a very particular account. He had some letters, and was ingenious, but he was an infidel, and wickedly undertook, some years after, to turn the Bible into doggerel verse; as Cotton had formerly done with Virgil. By this means he set many facts in a ridiculous light, and might have done mischief with weak minds, if his work had been published; but it never was.

At his house I lay that night, and arrived the next morning at Burlington; but had the mortification to find, that the regular boats were gone a little before, and no other expected to go before Tuesday, this being Saturday. Wherefore I returned to an old woman in the town, of whom I had bought some gingerbread to eat on the water, and asked her advice. She proposed to lodge me, till a passage by some other boat occurred. I accepted her offer, being much fatigued by traveling on foot. Understanding I was a printer, she would have had me remain in that town and follow my business; being ignorant what stock was necessary to begin with. She was very hospitable, gave me a dinner of ox-cheek with great good will, accepting only of

a pot of ale in return; and I thought myself fixed till Tuesday should come. However, walking in the evening by the side of the river, a boat came by, which I found was going towards Philadelphia with several people in her. They took me in, and, as there was no wind, we rowed all the way; and about midnight, not having yet seen the city, some of the company were confident we must have passed it, and would row no further; the others knew not where we were, so we put towards the shore, got into a creek, landed near an old fence, with the rails of which we made a fire, the night being cold, in October, and there we remained till daylight. Then one of the company knew the place to be Cooper's creek, a little above Philadelphia, which we saw as soon as we got out of the creek, and arrived there about eight or nine o'clock on the Sunday morning, and landed at Market street wharf.

I have been the more particular in this description of my journey, and shall be so of my first entry into that city, that you may in your mind compare such unlikely beginnings with the figure I have since made there. I was in my working dress, my best clothes coming round by sea. I was dirty from my being so long in the boat. My pockets were stuffed out with shirts and stockings, and I knew no one, nor where to look for lodging. Fatigued with walking, rowing, and the want of sleep, I was very hungry; and my whole stock of cash consisted in a single dollar, and about a shilling in copper coin, which I gave to the boatmen for my passage. At first they refused it, on account of my having rowed, but I insisted on their taking it. Man is sometimes more generous when he has little money, than when he has plenty; perhaps to prevent his being thought to have but little.

I walked towards the top of the street, gazing about till near Market street, where I met a boy with bread. I had often made a meal of dry bread, and, inquiring where he had bought it, I went im

mediately to the baker's he directed me to. I asked for biscuits, meaning such as we had at Boston; that sort, it seems, was not made in Philadelphia. I then asked for a three penny loaf, and was told they had none. Not knowing the different prices, nor the names of the different sorts of bread, I told him to give me three penny worth of any sort. He gave me, accordingly, three great puffy rolls. I was surprised at the quantity, but took it, and, having no room in my pockets, walked off with a roll under each arm, and eating the other. Thus I went up Market street as far as Fourth street, passing by the door of Mr. Read, my future wife's father; when she, standing at the door, saw me, and thought I made, as I certainly did, a most awkward, ridiculous appearance. Then I turned and went down Chestnut street and part of Walnut street, eating my roll all the way, and, coming round, found myself again at Market street wharf, near the boat I came in, to which I went for a draught of the river water; and, being filled with one of my rolls, gave the other two to a woman and her child that came down the river in the boat with us, and were waiting to go further.

Thus refreshed, I walked again up the street, which, by this time, had many clean dressed people in it, who were all walking the same way. I joined them, and thereby was led into the great meeting house of the Quakers, near the market. I sat down among them, and, after looking round a while and hearing nothing said, being very drowsy, through labor and want of rest the preceding night, I fell fast asleep, and continued so till the meeting broke up, when some one was kind enough to rouse me. This, therefore, was the first house I was in, or slept in, in Philadelphia.

I then walked down towards the river, and, looking in the faces of every one, I met a young Quaker man, whose countenance pleased me, and, accosting him, requested he would tell me where a stranger

could get a lodging. We were then near the sign of the Three Mariners. "Here," said he, "is a house where they receive strangers, but it is not a reputable one; if thee wilt walk with me, I'll show thee a better one;" and he conducted me to the Crooked Billet, in Water street. There I got a dinner; and while I was eating, several questions were asked me; as, from my youth and appearance, I was suspected of being a runaway.

After dinner, my host having shown me to a bed, I laid myself on it without undressing, and slept till six in the evening, when I was called to supper. I went to bed again very early, and slept very soundly till next morning. Then I dressed myself as neat as I could, and went to Andrew Bradford, the printer's. I found in the shop the old man, his father, whom I had seen at New York, and who, traveling on horseback, had got to Philadelphia before me. He introduced me to his son, who received me civilly, gave me a breakfast, but told me he did not at present want a hand, being lately supplied with one; but there was another printer in town, lately set up, one Keimer, who perhaps might employ me; if not, I should be welcome to lodge at his house, and he would give me a little work to do now and then, till fuller business should offer.

The old gentleman said he would go with me to the new printer; and when we found him, "Neighbor," said Bradford, "I have brought to see you a young man of your business; perhaps you may want such a one." He asked me a few questions, put a composing stick in my hand to see how I worked, and then said he would employ me soon, though he had just then nothing for me to do. And taking old Bradford, whom he had never seen before, to be one of the town's people that had a good will for him, entered into a conversation on his present undertaking and prospects; while Bradford, not discovering that he was the other printer's father, on Keimer's saying he expected soon to get the greatest part of the business

into his own hands, drew him on by artful questions, and starting little doubts, to explain all his views, what influence he relied on, and in what manner he intended to proceed. I, who stood by and heard all, saw immediately that one was a crafty old sophister, and the other a true novice. Bradford left me with Keimer, who was greatly surprised when I told him who the old man was.

The printing house, I found, consisted of an old, damaged press, and a small, worn out fount of English types, which he was using himself, composing an *Elegy* on Aquila Rose, before mentioned; an ingenious young man, of excellent character, much respected in the town, secretary to the Assembly, and a pretty poet. Keimer made verses too, but very indifferently. He could not be said to *write* them, for his method was to compose them in the types directly out of his head. There being no copy, but one pair of cases, and the *Elegy* probably requiring all the letter, no one could help him. I endeavored to put his press, (which he had not yet used, and of which he understood nothing,) into order to be worked with; and, promising to come and print off his *Elegy*, as soon as he should have got it ready, I returned to Bradford's, who gave me a little job to do for the present, and there I lodged and dined. A few days after, Keimer sent for me to print off the *Elegy*. And now he had got another pair of cases, and a pamphlet to reprint, on which he set me to work.

These two printers I found poorly qualified for their business. Bradford had not been bred to it, and was very illiterate; and Keimer, though something of a scholar, was a mere compositor, knowing nothing of press work. He had been one of the French prophets, and could act their enthusiastic agitations. At this time he did not profess any particular religion, but something of all on occasion; was very ignorant of the world, and had, as I afterwards found, a good deal of the knave in his composition. He did not like my lodging at Bradford's while I worked with him.

He had a house, indeed, but without furniture, so he could not lodge me; but he got me a lodging at Mr. Read's, before mentioned, who was the owner of his house; and, my chest of clothes being come by this time, I made rather a more respectable appearance in the eyes of Miss Read, than I had done when she first happened to see me eating my roll in the street.

I began now to have some acquaintance among the young people of the town, that were lovers of reading, with whom I spent my evenings very pleasantly; and gained money by my industry and frugality. I lived very contented, and forgot Boston as much as I could, and did not wish it should be known where I resided, except to my friend Collins, who was in the secret, and kept it faithfully. At length, however, an incident happened, that occasioned my return home much sooner than I had intended. I had a brother-in-law, Robert Holmes, master of a sloop that traded between Boston and Delaware. He being at Newcastle, forty miles below Philadelphia, and hearing of me, wrote me a letter mentioning the grief of my relations and friends in Boston at my abrupt departure, assuring me of their good will to me, and that every thing would be accommodated to my mind, if I would return; to which he entreated me earnestly. I wrote an answer to his letter, thanked him for his advice, but stated my reasons for quitting Boston so fully and in such a light, as to convince him that I was not so much in the wrong as he had apprehended.

Sir William Keith, Governor of the province, was then at Newcastle, and Captain Holmes, happening to be in company with him when my letter came to hand, spoke to him of me, and showed him the letter. The governor read it, and seemed surprised when he was told my age. He said I appeared a young man of promising parts, and therefore should be encouraged; the printers at Philadelphia were wretched ones; and, if I would set up there, he made no doubt I should succeed; for his part he would procure me the public business, and do me every other service

in his power. This my brother-in-law Holmes afterwards told me in Boston; but I knew as yet nothing of it; when one day Keimer and I being at work together near the window, we saw the governor and another gentleman, (who proved to be Colonel French, of Newcastle, in the province of Delaware,) finely dressed, come directly across the street, to our house, and heard them at the door.

Keimer ran down immediately, thinking it a visit to him; but the governor inquired for me, came up, and with a condescension and politeness I had been quite unused to, made me many compliments, desired to be acquainted with me, blamed me kindly for not having made myself known to him, when I first came to the place, and would have me away with him to the tavern, where he was going with Colonel French to taste, as he said, some excellent madeira. I was not a little surprised, and Keimer stared with astonishment. I went however with the governor and Colonel French to a tavern, at the corner of Third street, and over the madeira he proposed my setting up my business. He stated the probabilities of my success, and both he and Colonel French assured me, I should have their interest and influence to obtain for me the public business of both governments. And as I expressed doubts that my father would assist me in it, Sir William said he would give me a letter to him, in which he would set forth the advantages, and he did not doubt he should determine him to comply. So it was concluded I should return to Boston by the first vessel, with the governor's letter to my father. In the mean time it was to be kept a secret, and I went on working with Keimer as usual. The governor sent for me now and then to dine with him, which I considered a great honor; more particularly as he conversed with me in a most affable, familiar, and friendly manner.

About the end of April, 1724, a little vessel offered for Boston. I took leave of Keimer, as going to see my friends. The Governor gave me an ample

letter, saying many flattering things of me to my father, and strongly recommending the project of my setting up at Philadelphia, as a thing that would make my fortune. We struck on a shoal in going down the bay, and sprung a leak; we had a blustering time at sea, and were obliged to pump almost continually, at which I took my turn. We arrived safe, however, at Boston in about a fortnight. I had been absent seven months, and my friends had heard nothing of me; for my brother Holmes was not yet returned, and had not written about me. My unexpected appearance surprised the family; all were, however, very glad to see me, and made me welcome, except my brother. I went to see him at his printing house. I was better dressed than ever while in his service, having a genteel new suit from head to foot, a watch, and my pockets lined with near five pounds sterling in silver. He received me not very frankly, looked me all over, and turned to his work again.

The journeymen were inquisitive where I had been, what sort of a country it was, and how I liked it. I praised it much, and the happy life I led in it, expressing strongly my intention of returning to it; and, one of them asking what kind of money we had there, I produced a handful of silver, and spread it before them, which was a kind of *raree-show* they had not been used to, paper being the money of Boston. Then I took an opportunity of letting them see my watch; and, lastly, (my brother still grum and sullen,) gave them a dollar to drink, and took my leave. This visit of mine offended him extremely. For, when my mother, some time after, spoke to him of a reconciliation, and of her wish to see us on good terms together, and that we might live for the future as brothers; he said, I had insulted him in such a manner before his people, that he could never forget or forgive it. In this, however, he was mistaken.

My father received the Governor's letter with some surprise; but said little of it to me for some time. Captain Holmes returning, he showed it to him, and asked him, if he knew Sir William Keith, and what kind of man he was; adding that he must be of small discretion, to think of setting a youth up in business, who wanted three years to arrive at man's estate. Holmes said what he could in favor of the project, but my father was decidedly against it, and at last gave a flat denial. He wrote a civil letter to Sir William, thanking him for the patronage he had so kindly offered me, and declining to assist me as yet in setting up; I being, in his opinion, too young to be trusted with the management of an undertaking so important, and for which the preparation required a considerable expenditure.

My *old* companion, Collins, who was a clerk in the post office, pleased with the account I gave him of my new country, determined to go thither, also; and, while I waited for my father's determination, he set out before me by land to Rhode Island, leaving his books, which were a pretty collection in mathematics and natural philosophy, to come with mine and me to New York; where he proposed to wait for me.

My father, though he did not approve Sir William's proposition, was yet pleased that I had been able to obtain so advantageous a character from a person of such note where I had resided; and that I had been so industrious and careful as to equip myself so handsomely in so short a time; therefore, seeing no prospect of an accommodation between my brother and me, he gave his consent to my returning again to Philadelphia, advised me to behave respectfully to the people there, endeavor to obtain the general esteem, and avoid lampooning and libeling, to which he thought I had too much inclination; telling me, that by steady industry and prudent parsimony, I might save enough by the time I was one and twenty to set me up; and that if

I came near the matter he would help me out with the rest. This was all I could obtain, except some small gifts as tokens of his and my mother's love, when I embarked again for New York; now with their approbation and their blessing.

The sloop putting in at Newport, Rhode Island, I visited my brother John, who had been married and settled there some years. He received me very affectionately, for he always loved me. A friend of his, one Vernon, having some money due to him in Pennsylvania, about thirty-five pounds currency, desired I would recover it for him, and keep it till I had his directions what to employ it in. Accordingly he gave me an order to receive it. This business afterwards occasioned me a good deal of uneasiness.

At Newport we took in a number of passengers, amongst whom were two young women traveling together, and a sensible, matron-like Quaker lady, with her servants. I had shown an obliging disposition to render her some little services, which probably impressed her with sentiments of good will towards me; for when she witnessed the daily growing familiarity between the young women and myself, which they appeared to encourage; she took me aside, and said, "Young man, I am concerned for thee, as thou hast no friend with thee, and seems not to know much of the world, or of the snares youth is exposed to; depend upon it, these are very bad women; I can see it by all their actions; and if thee art not upon thy guard, they will draw thee into some danger; they are strangers to thee, and I advise thee, in a friendly concern for thy welfare, to have no acquaintance with them." As I seemed at first not to think so ill of them as she did, she mentioned some things she had observed and heard, that had escaped my notice, but now convinced me she was right. I thanked her for her kind advice, and promised to follow it. When we arrived at New York, they told me where they lived, and invited me to come and see them; but I avoided it, and it was well I did.

For the next day the captain missed a silver spoon and some other things, that had been taken out of his cabin, and, knowing that these were a couple of strumpets, he got a warrant to search their lodgings, found the stolen goods, and had the thieves punished. So though we had escaped a sunken rock, which we scraped upon in the passage, I thought this escape of rather more importance to me.

At New York I found my friend Collins, who had arrived there some time before me. We had been intimate from children, and had read the same books together; but he had the advantage of more time for reading and studying, and a wonderful genius for mathematical learning, in which he far outstripped me. While I lived in Boston, most of my hours of leisure for conversation were spent with him, and he continued a sober as well as industrious lad; was much respected for his learning by several of the clergy and other gentlemen; and seemed to promise making a good figure in life. But, during my absence he had acquired a habit of drinking brandy; and I found by his own account, as well as that of others, that he had been drunk every day since his arrival at New York, and behaved himself in a very extravagant manner. He had gamed too and lost his money, so that I was obliged to discharge his lodgings, and defray his expenses on the road, and at Philadelphia; which proved a great burden to me.

The then governor of New York, Burnet, (son of Bishop Burnet,) hearing from the captain that one of the passengers had a great many books on board, desired him to bring me to see him. I waited on him, and should have taken Collins with me, had he been sober. The governor received me with great civility, showed me his library, which was a considerable one, and we had a good deal of conversation relative to books and authors. This was the second governor who had done me the honor to take notice of me; and for a poor boy, like me, it was very pleasing.

We proceeded to Philadelphia. I received in the way Vernon's money, without which we could hardly have finished our journey. Collins wished to be employed in some counting house; but, whether they discovered his dram-drinking by his breath, or by his behavior, though he had some recommendations, he met with no success in any application, and continued lodging and boarding at the same house with me, and at my expense. Knowing I had that money of Vernon's, he was continually borrowing of me, still promising repayment, as soon as he should be in business. At length he had got so much of it, that I was distressed to think what I should do, in case of being called on to remit it.

His drinking continued, about which we sometimes quarreled; for, when a little intoxicated, he was very irritable. Once in a boat on the Delaware with some other young men, he refused to row in his turn. "I will be rowed home," said he. "We will not row you," said I. "You must," said he, "or stay all night on the water, just as you please." The others said, "Let us row, what signifies it?" But, my mind being soured with his other conduct, I continued to refuse. So he swore he would make me row, or throw me overboard; and coming along, stepping on the thwarts towards me, when he came up and struck at me, I clapped my head under his thighs, and, rising, pitched him head foremost into the river. I knew he was a good swimmer, and so was under little concern about him; but before he could get round to lay hold of the boat, we had with a few strokes, pulled her out of his reach; and whenever he drew near the boat, we asked him if he would row, striking a few strokes to slide her away from him. He was ready to stifle with vexation, and obstinately would not promise to row. Finding him at last beginning to tire, we drew him into the boat, and brought him home dripping wet. We hardly exchanged a civil word after this adventure. At length a West India captain, who had a commission to procure a preceptor

for the sons of a gentleman at Barbadoes, met with him, and proposed to carry him thither to fill that situation. He accepted, and promised to remit me what he owed me out of the first money he should receive; but I never heard from him after.

The violation of my trust respecting Vernon's money was one of the first great *errata* of my life; and this showed, that my father was not much out in his judgment, when he considered me as too young to manage business. But Sir William, on reading his letter, said he was too prudent, that there was a great difference in persons; and discretion did not always accompany years, nor was youth always without it. "But, since he will not set you up, I will do it myself. Give me an inventory of the things necessary to be had from England, and I will send for them. You shall repay me when you are able; I am resolved to have a good printer here, and I am sure you must succeed." This was spoken with such an appearance of cordiality, that I had not the least doubt of his meaning what he said. I had hitherto kept the proposition of my setting up a secret in Philadelphia, and I still kept it. Had it been known that I depended on the governor, probably some friend, that knew him better, would have advised me not to rely on him; as I afterwards heard it as his known character to be liberal of promises, which he never meant to keep. Yet, unsolicited as he was by me, how could I think his generous offers insincere? I believed him to be one of the best men in the world.

I presented him an inventory of a little printing house, amounting by my computation to about one hundred pounds sterling. He liked it, but asked me if my being on the spot in England to choose the types, and see that every thing was good of the kind, might not be of some advantage. "Then," said he, "when there, you may make acquaintance, and establish correspondences in the bookselling and stationery line." I agreed that this might be advantageous.

“Then,” said he, “get yourself ready to go with *Annis*,” which was the annual ship, and the only one at that time usually passing between London and Philadelphia. But as it would be some months before *Annis* sailed, I continued working with Keimer, fretting extremely about the money Collins had got from me, and in great apprehensions of being called upon for it by Vernon; this, however, did not happen for some years after.

I believe I have omitted mentioning, that in my first voyage from Boston to Philadelphia, being becalmed off Block Island, our crew employed themselves in catching cod, and hauled up a great number. Till then I had stuck to my resolution to eat nothing that had had life; and on this occasion I considered, according to my master Tryon, the taking every fish as a kind of unprovoked murder, since none of them had, nor could do us any injury that might justify this massacre. All this seemed very reasonable. But I had been formerly a great lover of fish, and, when it came out of the frying pan, it smelt admirably well. I balanced sometime between principle and inclination, till recollecting, that, when the fish were opened, I saw smaller fish taken out of their stomachs; then thought I, “If you eat one another, I don’t see why we may not eat you.” So I dined upon cod very heartily, and have since continued to eat as other people; returning only now and then occasionally to a vegetable diet. So convenient a thing it is to be a *reasonable creature*, since it enables one to find or make a *reason* for every thing one has a mind to do.

Keimer and I lived on a pretty good familiar footing, and agreed tolerably well; for he suspected nothing of my setting up. He retained a great deal of his old enthusiasm, and loved argumentation. We therefore had many disputations. I used to work him so with my Socratic method, and had trepanned him so often by questions apparently so distant from any point we had in hand, yet by degrees leading

to the point and bringing him into difficulties and contradictions, that at last he grew ridiculously cautious, and would hardly answer me the most common question, without asking first, "What do you intend to infer from that?" However, it gave him so high an opinion of my abilities in the confuting way, that he seriously proposed my being his colleague in a project he had of setting up a new sect. He was to preach the doctrines, and I was to confound all opponents. When he came to explain with me upon the doctrines, I found several conundrums which I objected to, unless I might have my way a little too, and introduce some of mine.

Keimer wore his beard at full length, because somewhere in the Mosaic law it is said, "*Thou shalt not mar the corners of thy beard.*" He likewise kept the seventh day, Sabbath; and these two points were essential with him. I disliked both; but agreed to them on condition of his adopting the doctrine of not using animal food. "I doubt," said he, "my constitution will not bear it." I assured him it would, and that he would be the better for it. He was usually a great eater, and I wished to give myself some diversion in half starving him. He consented to try the practice, if I would keep him company. I did so, and we held it for three months. Our provisions were purchased, cooked, and brought to us regularly by a woman in the neighborhood, who had from me a list of forty dishes, which she prepared for us at different times, in which there entered neither fish, flesh, nor fowl. This whim suited me the better at this time from the cheapness of it, not costing us above eighteen pence sterling each per week. I have since kept several lents most strictly, leaving the common diet for that, and that for the common, abruptly, without the least inconvenience. So that I think there is little in the advice of making those changes by easy gradations. I went on pleasantly, but poor Keimer suffered grievously, grew tired of the project, longed for the fleshpots of Egypt

and ordered a roast pig. He invited me and two women friends to dine with him; but, it being brought too soon upon table, he could not resist the temptation, and ate the whole before we came.

I had made some courtship during this time to Miss Read. I had a great respect and affection for her, and had some reasons to believe she had the same for me; but, as I was about to take a long voyage, and we were both very young, only a little above eighteen, it was thought most prudent by her mother, to prevent our going too far at present, as a marriage, if it was to take place, would be more convenient after my return, when I should be, as I hoped, set up in my business. Perhaps too she thought my expectations not so well founded as I imagined them to be.

My chief acquaintances at this time were Charles Osborne, Joseph Watson, and James Ralph; all lovers of reading. The two first were clerks to an eminent scrivener or conveyancer in the town, Charles Brockden, the other was a clerk to a merchant. Watson was a pious, sensible young man, of great integrity; the others rather more lax in their principles of religion, particularly Ralph, who, as well as Collins, had been unsettled by me; for which they both made me suffer. Osborne was sensible, candid, frank; sincere and affectionate to his friends; but, in literary matters, too fond of criticism. Ralph was ingenious, genteel in his manners, and extremely eloquent; I think I never knew a prettier talker. Both were great admirers of poetry, and began to try their hands in little pieces. Many pleasant walks we have had together on Sundays in the woods, on the banks of the Schuylkill, where we read to one another, and conferred on what we had read.

Ralph was inclined to give himself up entirely to poetry, not doubting that he might make great proficiency in it, and even make his fortune by it. He pretended, that the greatest poets must, when they first began to write, have committed as many faults as he did. Osborne endeavored to dissuade him,

assured him he had no genius for poetry, and advised him to think of nothing beyond the business he was bred to; that, in the mercantile way, though he had no stock, he might, by his diligence and punctuality recommend himself to employment as a factor, and in time acquire wherewith to trade on his own account. I approved, for my part, the amusing one's self with poetry now and then, so far as to improve one's language, but no further.

On this it was proposed, that we should each of us, at our next meeting, produce a piece of our own composing, in order to improve by our mutual observations, criticisms, and corrections. As language and expression were what we had in view, we excluded all considerations of invention, by agreeing that the task should be a version of the eighteenth Psalm, which describes the descent of a Deity. When the time of our meeting drew nigh, Ralph called on me first, and let me know his piece was ready. I told him, I had been busy, and, having little inclination, had done nothing. He then showed me his piece for my opinion, and I much approved it, as it appeared to me to have great merit. "Now," said he, "Osborne never will allow the least merit in any thing of mine, but makes a thousand criticisms out of mere envy. He is not so jealous of you; I wish, therefore, you would take this piece and produce it as yours; I will pretend not to have had time, and so produce nothing. We shall then hear what he will say to it." It was agreed, and I immediately transcribed it, that it might appear in my own hand.

We met; Watson's performance was read; there were some beauties in it, but many defects. Osborne's was read; it was much better; Ralph did it justice; remarked some faults, but applauded the beauties. He himself had nothing to produce. I was backward, seemed desirous of being excused, had not had sufficient time to correct, &c.; but no excuse could be admitted; produce I must. It was

read, and repeated; Watson and Osborne gave up the contest, and joined in applauding it. Ralph only made some criticisms, and proposed some amendments; but I defended my text. Osborne was severe against Ralph, and told me he was no better able to criticise than compose verses. As these two were returning home, Osborne expressed himself still more strongly in favor of what he thought my production; having before refrained, as he said, lest I should think he meant to flatter me. "But who would have imagined," said he, "that Franklin was capable of such a performance; such painting, such force, such fire! He has even improved on the original. In common conversation he seems to have no choice of words; he hesitates and blunders; and yet, good God, how he writes!" When we next met, Ralph discovered the trick we had played, and Osborne was laughed at.

This transaction fixed Ralph in his resolution of becoming a poet. I did all I could to dissuade him from it, but he continued scribbling verses till Pope cured him. He became, however, a pretty good prose writer. More of him hereafter. But, as I may not have occasion to mention the other two, I shall just remark here, that Watson died in my arms a few years after, much lamented, being the best of our set. Osborne went to the West Indies, where he became an eminent lawyer and made money, but died young. He and I had made a serious agreement, that the one, who happened first to die, should, if possible, make a friendly visit to the other, and acquaint him how he found things in that separate state. But he never fulfilled his promise.

The governor, seeming to like my company, had me frequently at his house, and his setting me up was always mentioned as a fixed thing. I was to take with me letters recommendatory to a number of his friends, besides the letter of credit to furnish me with the necessary money for purchasing the

press, types, paper, &c. For these letters I was appointed to call at different times, when they were to be ready; but a future time was still named. Thus we went on till the ship, whose departure, too, had been several times postponed, was on the point of sailing. Then, when I called to take my leave and receive the letters, his secretary, Dr. Baird, came out to me, and said the governor was extremely busy in writing, but would be down at Newcastle before the ship, and then the letters would be delivered to me.

Ralph, though married, and having one child, had determined to accompany me in this voyage. It was thought he intended to establish a correspondence, and obtain goods to sell on commission; but I found after, that, having some cause of discontent with his wife's relations, he proposed to leave her on their hands, and never to return to America. Having taken leave of my friends, and exchanged promises with Miss Read, I quitted Philadelphia, in the ship, which anchored at Newcastle. The governor was there; but when I went to his lodging, his secretary came to me from him with expressions of the greatest regret, that he could not then see me, being engaged in business of the utmost importance; but that he would send the letters to me on board, wishing me heartily a good voyage and a speedy return, &c. I returned on board a little puzzled, but still not doubting.

CHAPTER III.

MR. ANDREW HAMILTON, a celebrated lawyer of Philadelphia, had taken his passage in the same ship for himself and son, with Mr. Denham, a Quaker merchant, and Messrs. Oniam and Russel, masters of an iron work in Maryland, who had engaged the great cabin; so that Ralph and I were forced to take up with a berth in the steerage, and, none on board knowing us, were considered as ordinary persons. But Mr. Hamilton and his son (it was James, since governor,) returned from Newcastle to Philadelphia; the father being recalled by a great fee to plead for a seized ship. And, just before we sailed, Colonel French coming on board, and showing me great respect, I was more taken notice of, and, with my friend Ralph, invited by the other gentlemen to come into the cabin, there being now room. Accordingly we removed thither.

Understanding that Colonel French had brought on board the Governor's dispatches, I asked the captain for those letters that were to be under my care. He said all were put into the bag together; and he could not then come at them; but, before we landed in England, I should have an opportunity of picking them out; so I was satisfied for the present, and we proceeded on our voyage. We had a sociable company in the cabin, and lived uncommonly well, having the addition of all Mr. Hamilton's stores, who had laid in plentifully. In this passage Mr. Denham contracted a friendship for me, that continued during his life. The voyage was otherwise not a pleasant one, as we had a great deal of bad weather.

When we came into the Channel, the captain kept his word with me, and gave me an opportunity of examining the bag for the governor's letters. I found some upon which my name was put as under my care. I picked out six or seven, that, by the handwriting I thought might be the promised letters, especially as one of them was addressed to Baskett, the King's printer, and another to some stationer. We arrived in London the 24th December, 1724. I waited upon the stationer, who came first in my way, delivering the letter as from Governor Keith. "I don't know such a person," said he; but, opening the letter, "O! this is from Riddlesden. I have lately found him to be a complete rascal, and I will have nothing to do with him, nor receive any letters from him." So putting the letter into my hand, he turned on his heel and left me to serve some customer. I was surprised to find these were not the governor's letters; and, after recollecting and comparing circumstances, I began to doubt his sincerity. I found my friend Denham, and opened the whole affair to him. He let me into Keith's character, told me there was not the least probability that he had written any letters for me; that no one, who knew him, had the smallest dependence on him; and he laughed at the idea of the governor's giving me a letter of credit, having, as he said, no credit to give. On my expressing some concern about what I should do, he advised me to endeavor getting some employment in the way of my business. "Among the printers here," said he, "you will improve yourself, and, when you return to America, you will set up to greater advantage."

We both of us happened to know, as well as the stationer, that Riddlesden, the attorney, was a very knave. He had half ruined Miss Read's father, by persuading him to be bound for him. By his letter it appeared there was a secret scheme on foot, to the prejudice of Mr. Hamilton (supposed to be then

coming over with us;) that Keith was concerned in it with Riddlesden. Denham, who was a friend of Hamilton's, thought he ought to be acquainted with it; so when he arrived in England, which was soon after, partly from resentment and ill will to Keith and Riddlesden, and partly from good will to him, I waited on him, and gave him the letter. He thanked me cordially, the information being of importance to him; and from that time he became my friend, greatly to my advantage afterwards on many occasions.

But what shall we think of a governor playing such pitiful tricks, and imposing so grossly on a poor ignorant boy! It was a habit he had acquired. He wished to please every body; and, having little to give, he gave expectations. He was otherwise an ingenious, sensible man, a pretty good writer, and a good governor for the people; though not for his constituents, the Proprietaries, whose instructions he sometimes disregarded. Several of our best laws were of his planning, and passed during his administration.

Ralph and I were inseparable companions. We took lodgings together in little Britain at three shillings and sixpence a week; as much as we could then afford. He found some relations, but they were poor, and unable to assist him. He now let me know his intentions of remaining in London, and that he never meant to return to Philadelphia. He had brought no money with him; the whole he could muster having been expended in paying his passage. I had fifteen pistoles; so he borrowed occasionally of me to subsist, while he was looking out for business. He first endeavored to get into the play house, believing himself qualified for an actor; but Wilkes, to whom he applied, advised him candidly not to think of that employment, as it was impossible he should succeed in it. Then he proposed to Roberts, a publisher in Pater Noster Row, to write for him a weekly paper like the *Spectator*, on certain condi-

tions; which Roberts did not approve. Then he endeavored to get employment as a hackney writer, to copy for the stationers and lawyers about the Temple; but could not find a vacancy.

For myself, I immediately got into work at Palmer's, a famous printing house in Bartholomew Close, where I continued near a year. I was pretty diligent, but I spent with Ralph a good deal of my earnings at plays and public amusements. We had nearly consumed all my pistoles, and now just rubbed on from hand to mouth. He seemed quite to have forgotten his wife and child; and I, by degrees, my engagements with Miss Read, to whom I never wrote more than one letter, and that was to let her know I was not likely soon to return. This was another of the great *errata* of my life, which I could wish to correct, if I were to live it over again. In fact, by our expenses, I was constantly kept unable to pay my passage.

At Palmer's I was employed in composing for the second edition of Wollaston's "*Religion of Nature.*" Some of his reasonings not appearing to me well founded, I wrote a little metaphysical piece in which I made remarks on them. It was entitled, "*A Dissertation on Liberty and Necessity, Pleasure and Pain.*" I inscribed it to my friend Ralph; I printed a small number. It occasioned my being more considered by Mr. Palmer, as a young man of some ingenuity, though he seriously expostulated with me upon the principles of my pamphlet, which, to him, appeared abominable. My printing this pamphlet was another *erratum*. While I lodged in Little Britain, I made an acquaintance with one Wilcox, a bookseller, whose shop was next door. He had an immense collection of second hand books. Circulating libraries were not then in use; but we agreed, that, on certain reasonable terms, which I have now forgotten, I might take, read, and return any of his books. This I esteemed a great advantage, and I made as much use of it as I could.

My pamphlet, by some means, falling into the hands of one Lyons, a surgeon, author of a book entitled, "*The Infallibility of Human Judgment*," it occasioned an acquaintance between us. He took great notice of me, called on me often to converse on those subjects, carried me to the Horns, a pale ale house in — Lane, Cheapside, and introduced me to Dr. Mandeville, author of the "*Fable of the Bees*," who had a club there, of which he was the soul; being a most facetious, entertaining companion. Lyons too introduced me to Dr. Pemberton, at Batson's Coffee House, who promised to give me an opportunity, some time or other, of seeing Sir Isaac Newton, of which I was extremely desirous; but this never happened.

I had brought over a few curiosities, among which the principal was a purse made of the *asbestos*, which purifies by fire. Sir Hans Sloane heard of it, came to see me, and invited me to his house in Bloomsbury square, showed me all his curiosities, and persuaded me to add that to the number; for which he paid me handsomely.

In our house lodged a young woman, a milliner, who, I think, had a shop in the Cloisters. She had been genteely bred, was sensible, lively, and of a most pleasing conversation. Ralph read plays to her in the evenings, they grew intimate, she took another lodging, and he followed her. They lived together some time; but, he being still out of business, and her income not sufficient to maintain them with her child, he took a resolution of going from London, to try for a country school, which he thought himself well qualified to undertake, as he wrote an excellent hand, and was a master of arithmetic and accounts. This, however, he deemed a business below him, and, confident of future better fortune, when he should be unwilling to have it known that he once was so meanly employed, he changed his name, and did me the honor to assume mine; for I soon after had a letter from him, acquainting me that he was settled

in a small village, (in Berkshire, I think it was, where he taught reading and writing to ten or a dozen boys, at sixpence each per week,) recommending Mrs. T. to my care, and desiring me to write to him, directing for *Mr. Franklin*, schoolmaster, at such a place.

He continued to write to me frequently, sending me large specimens of an epic poem, which he was then composing, and desiring my remarks and corrections. These I gave him from time to time, but endeavored rather to discourage his proceeding. One of Young's Satires was then just published. I copied and sent him a great part of it, which set in a strong light the folly of pursuing the Muses. All was in vain; sheets of the poem continued to come by every post. In the mean time, Mrs. T——, having, on his account, lost her friends and business, was often in distresses, and used to send for me, and borrow what money I could spare, to help to alleviate them. I grew fond of her company, and, being at that time under no religious restraint, and taking advantage of my importance to her, I attempted to take some liberties with her (another *erratum*;) which she repulsed, with a proper degree of resentment. She wrote to Ralph, and acquainted him with my conduct; this occasioned a breach between us; and, when he returned to London, he let me know he considered all the obligations he had been under to me as annulled; from which I concluded I was never to expect his repaying the money I had lent him, or that I had advanced for him. This, however, was of little consequence, as he was totally unable; and by the loss of his friendship I found myself relieved from a heavy burden. I now began to think of getting a little beforehand, and, expecting better employment, I left Palmer's to work at Watts's, near Lincoln's Inn Fields, a still greater printing house. Here I continued all the rest of my stay in London.

At my first admission into the printing house, I took to working at press, imagining I felt a want

of the bodily exercise I had been used to in America, where press work is mixed with the composing. I drank only water; the other workmen, near fifty in number, were great drinkers of beer. On occasion I carried up and down stairs a large form of types in each hand, when others carried but one in both hands. They wondered to see, from this and several instances, that the *Water-American*, as they called me, was *stronger* than themselves, who drank *strong* beer! We had an ale house boy, who attended always in the house to supply the workmen. My companion at the press drank every day a pint before breakfast, a pint at breakfast with his bread and cheese, a pint between breakfast and dinner, a pint at dinner, a pint in the afternoon about six o'clock, and another when he had done his day's work. I thought it a detestable custom; but it was necessary, he supposed, to drink *strong* beer that he might be *strong* to labor. I endeavored to convince him, that the bodily strength afforded by beer could only be in proportion to the grain or flour of the barley dissolved in the water of which it was made; that there was more flour in a penny worth of bread; and, therefore, if he could eat that with a pint of water, it would give him more strength than a quart of beer. He drank on, however, and had four or five shillings to pay out of his wages every Saturday night for that vile liquor; an expense I was free from. And thus these poor devils keep themselves always under.

Watts, after some weeks, desiring to have me in the composing room, I left the pressmen; a new *bien venu* for drink, being five shillings, was demanded of me by the compositors. I thought it an imposition, as I had paid one to the pressmen; the master thought so, too, and forbade my paying it. I stood out two or three weeks; was, accordingly, considered as an excommunicate, and had so many little pieces of private malice practiced on me, by mixing my sorts, transposing and breaking my mat-

ter, &c., &c., if ever I stepped out of the room; and all ascribed to the *chapel ghost*, which, they said, ever haunted those not regularly admitted; that, notwithstanding the master's protection, I found myself obliged to comply and pay the money; convinced of the folly of being on ill terms with those one is to live with continually.

I was now on a fair footing with them, and soon acquired considerable influence. I proposed some reasonable alterations in their *chapel* laws, and carried them against all opposition. From my example, a great many of them left their muddling breakfast of beer, bread, and cheese, finding they could with me be supplied from a neighboring house, with a large porringer of hot water gruel, sprinkled with pepper, crumbled with bread, and a bit of butter in it, for the price of a pint of beer, viz: three halfpence. This was a more comfortable, as well as a cheaper, breakfast, and kept their heads clearer. Those who continued sitting with their beer all day were often, by not paying, out of credit at the ale house, and used to make interest with me to get beer; their *light*, as they phrased it, *being out*. I watched the pay table on Saturday night, and collected what I stood engaged for them, having to pay sometimes near thirty shillings a week on their accounts. This, and my being esteemed a pretty good *riggite*, that is, a jocular verbal satirist, supported my consequence in the society. My constant attendance (I never making a *St. Monday*) recommended me to the master; and my uncommon quickness at composing occasioned my being put upon work of dispatch, which was generally better paid. So I went on now very agreeably.

My lodgings in little Britain being too remote, I found another in Duke street, opposite to the Romish chapel. It was up three pair of stairs backwards, at an Italian warehouse. A widow lady kept the house; she had a daughter, and a maid servant, and a journeyman who attended the ware-

house, but lodged abroad. After sending to inquire my character at the house where I last lodged, she agreed to take me in at the same rate, three shillings and sixpence a week; cheaper, as she said, from the protection she expected in having a man to lodge in the house. She was a widow, an elderly woman; had been bred a Protestant, being a clergyman's daughter, but was converted to the Catholic religion by her husband, whose memory she much revered; had lived much among people of distinction, and knew a thousand anecdotes of them as far back as the time of Charles the Second. She was lame in her knees with the gout, and therefore seldom stirred out of her room; so, sometimes wanted company, and hers was so highly amusing to me, that I was sure to spend an evening with her whenever she desired it. Our supper was only half an anchovy each, on a very little slice of bread and butter, and half a pint of ale between us; but the entertainment was in her conversation. My always keeping good hours, and giving little trouble in the family, made her unwilling to part with me; so that, when I talked of a lodging I had heard of, nearer my business, for two shillings a week, which, intent as I was on saving money, made some difference, she bid me not think of it, for she would abate me two shillings a week for the future; so I remained with her at one shilling and sixpence as long as I stayed in London.

In a garret of her house there lived a maiden lady of seventy, in the most retired manner, of whom my landlady gave me this account; that she was a Roman Catholic, had been sent abroad when young, and lodged in a nunnery with an intent of becoming a nun; but, the country not agreeing with her, she returned to England, where, there being no nunnery, she had vowed to lead the life of a nun, as near as might be done in those circumstances. Accordingly she had given all her estate to charitable purposes, reserving only twelve pounds a year to live

on, and out of this sum she still gave a part in charity, living herself on water gruel only, and using no fire but to boil it. She had lived many years in that garret, being permitted to remain there gratis by successive Catholic tenants of the house below, as they deemed it a blessing to have her there. A priest visited her, to confess her every day. "From this I asked her," said my landlady, "how she, as she lived, could possibly find so much employment for a confessor?" "Oh," said she, "it is impossible to avoid *vain thoughts*." I was permitted once to visit her. She was cheerful and polite, and conversed pleasantly. The room was clean, but had no other furniture than a mattress, a table with a crucifix, and a book, a stool which she gave me to sit on, and a picture, over the chimney, of St. Veronica displaying her handkerchief, with the miraculous figure of Christ's bleeding face on it, which she explained to me with great seriousness. She looked pale, but was never sick; and I give it as another instance, on how small an income life and health may be supported.

At Watts's printing house I contracted an acquaintance with an ingenious young man, one Wygate, who, having wealthy relations, had been better educated than most printers; was a tolerable Latinist, spoke French, and loved reading. I taught him and a friend of his to swim, at twice going into the river, and they soon became good swimmers. They introduced me to some gentlemen from the country, who went to Chelsea by water, to see the College, and Don Saltero's curiosities. In our return, at the request of the company, whose curiosity Wygate had excited, I stripped and leaped into the river, and swam from near Chelsea to Blackfriars; performing in the way many feats of activity, both upon and under the water, that surprised and pleased those to whom they wore novelties.

I had from a child been delighted with this exercise, had studied and practiced Thevenot's motions and positions, and added some of my own, aiming at

the graceful and easy, as well as the useful. All these I took this occasion of exhibiting to the company, and was much flattered by their admiration; and Wygate, who was desirous of becoming a master, grew more and more attached to me on that account, as well as from the similarity of our studies. He at length proposed to me traveling all over Europe together, supporting ourselves every where by working at our business. I was once inclined to it; but mentioning it to my good friend Mr. Denham, with whom I often spent an hour when I had leisure, he dissuaded me from it; advising me to think only of returning to Pennsylvania, which he was now about to do.

I must record one trait of this good man's character. He had formerly been in business at Bristol, but failed in debt to a number of people, compounded, and went to America. There, by a close application to business as a merchant, he acquired a plentiful fortune in a few years. Returning to England in the ship with me, he invited his old creditors to an entertainment, at which he thanked them for the easy composition they had favored him with, and, when they expected nothing but the treat, every man at the first remove found under his plate an order on a banker for the full amount of the unpaid remainder, with interest.

He now told me he was about to return to Philadelphia, and should carry over a great quantity of goods in order to open a store there. He proposed to take me over as his clerk, to keep his books, in which he would instruct me, copy his letters, and attend the store. He added, that, as soon as I should be acquainted with mercantile business, he would promote me by sending me with a cargo of flour and bread to the West Indies, and procure me commissions from others which would be profitable; and, if I managed well, would establish me handsomely. The thing pleased me; for I was grown tired of London, remembered with pleasure the happy months I had spent

in Pennsylvania, and wished again to see it. Therefore I immediately agreed on the terms of fifty pounds a year, Pennsylvania money; less indeed than my then present gettings as a compositor, but affording a better prospect.

I now took leave of printing, as I thought, for ever, and was daily employed in my new business, going about with Mr. Denham among the tradesmen to purchase various articles, and see them packed up, delivering messages, calling upon workmen to dispatch, &c.; and, when all was on board, I had a few days' leisure. On one of these days, I was, to my surprise, sent for by a great man I knew only by name, Sir William Wyndham, and I waited upon him. He had heard by some means or other of my swimming from Chelsea to Blackfriars, and of my teaching Wygate and another young man to swim in a few hours. He had two sons about to set out on their travels; he wished to have them first taught swimming, and proposed to gratify me handsomely if I would teach them. They were not yet come to town, and my stay was uncertain; so I could not undertake it. But, from the incident, I thought it likely, that if I were to remain in England and open a swimming school, I might get a good deal of money; and it struck me so strongly, that, had the overture been made me sooner, probably I should not so soon have returned to America. Many years after, you and I had something of more importance to do with one of these sons of Sir William Wyndham, become Earl of Egremont, which I shall mention in its place.

Thus I passed about eighteen months in London; most part of the time I worked hard at my business, and spent but little upon myself, except in seeing plays, and in books. My friend Ralph had kept me poor; he owed me about twenty-seven pounds, which I was now never likely to receive; a great sum out of my small earnings! I loved him, notwithstanding, for he had many amiable qualities. I had improved

my knowledge, however, though I had by no means improved my fortune; but I had made some very ingenious acquaintance, whose conversation was of great advantage to me; and I had read considerably.

CHAPTER IV.

WE sailed from Gravesend on the 23d of July, 1726. For the incidents of the voyage, I refer you to my journal, where you will find them all minutely related. Perhaps the most important part of that journal is the *plan* to be found in it, which I formed at sea, for regulating the future conduct of my life. It is the more remarkable, as being formed when I was so young, and yet being pretty faithfully adhered to quite through to old age.

We landed at Philadelphia the 11th of October, where I found sundry alterations. Keith was no longer governor, being superseded by Major Gordon; I met him walking the streets as a common citizen. He seemed a little ashamed at seeing me, and passed without saying any thing. I should have been as much ashamed at seeing Miss Read, had not her friends, despairing, with reason, of my return, after the receipt of my letter, persuaded her to marry another, one Rogers, a potter, which was done in my absence. With him, however, she was never happy, and soon parted from him, refusing to cohabit with him, or bear his name, it being now said he had another wife. He was a worthless fellow, though an excellent workman, which was the temptation to her friends. He got into debt, ran away in 1727 or 1728, went to the West Indies,

and died there. Keimer had got a better house, a shop well supplied with stationery, plenty of new types, and a number of hands, though none good, and seemed to have a great deal of business.

Mr. Denham took a store in Water street, where we opened our goods; I attended the business diligently, studied accounts, and grew in a little time expert at selling. We lodged and boarded together; he counseled me as a father, having a sincere regard for me. I respected and loved him, and we might have gone on together very happily; but, in the beginning of February, 1727, when I had just passed my twenty-first year, we both were taken ill. My distemper was a pleurisy, which very nearly carried me off. I suffered a good deal, gave up the point in my own mind, and was at the time rather disappointed when I found myself recovering; regretting, in some degree, that I must now, some time or other, have all that disagreeable work to go over again. I forget what Mr. Denham's distemper was; it held him a long time, and at length carried him off. He left me a small legacy in a nuncupative will, as a token of his kindness for me, and he left me once more to the wide world; for the store was taken into the care of his executors, and my employment under him ended.

My brother-in-law, Holmes, being now at Philadelphia, advised my return to my business; and Keimer tempted me, with an offer of large wages by the year, to come and take the management of his printing house, that he might better attend to his stationer's shop. I had heard a bad character of him in London, from his wife and her friends, and was not for having any more to do with him. I wished for employment as a merchant's clerk; but, not meeting with any, I closed again with Keimer. I found in his house these hands: Hugh Meredith, a Welsh Pennsylvanian, thirty years of age, bred to country work; he was honest, sensible, a man of experience, and fond of reading, but addicted to drink-

ing. Stephen Potts, a young countryman of full age, bred to the same, of uncommon natural parts, and great wit and humor; but a little idle. These he had agreed with, at extreme low wages per week, to be raised a shilling every three months as they would deserve by improving in their business; and the expectation of these high wages, to come on hereafter, was what he had drawn them in with. Meredith was to work at press, Potts at book binding, which he by agreement was to teach them, though he knew neither one nor the other. John —, a wild Irishman, brought up to no business, whose service, for four years, Keimer had purchased from the captain of a ship; he, too, was to be made a pressman. George Webb, an Oxford scholar, whose time for four years he had likewise bought, intending him for a compositor, of whom more presently; and David Harry, a country boy, whom he had taken apprentice.

I soon perceived, that the intention of engaging me at wages, so much higher than he had been used to give, was, to have these raw, cheap hands formed through me; and, as soon as I had instructed them, they being all articed to him, he should be able to do without me. I went, however, very cheerfully, put his printing house in order, which had been in great confusion, and brought his hands by degrees to mind their business, and do it better.

It was an odd thing to find an Oxford scholar in the situation of a bought servant. He was not more than eighteen years of age, and he gave me this account of himself: that he was born in Gloucester, educated at a grammar school, and had been distinguished among the scholars for some apparent superiority in performing his part, when they exhibited plays; belonged to the Wits' Club there, and had written some pieces in prose and verse, which were printed in the Gloucester newspapers. Thence was sent to Oxford; there he continued about a year, but not well satisfied; wishing of all things to see London, and become a player. At length receiving

his quarterly allowance of fifteen guineas, instead of discharging his debts, he went out of town, hid his gown in a furze bush, and walked to London; where, having no friend to advise him, he fell into bad company, soon spent his guineas, found no means of being introduced among the players, grew necessitous, pawned his clothes, and wanted bread. Walking the street very hungry, not knowing what to do with himself, a crimp's bill was put into his hand, offering immediate entertainment and encouragement to such as would bind themselves to serve in America. He went directly, signed the indentures, was put into the ship, and came over; never writing a line to his friends to acquaint them what was become of him. He was lively, witty, good natured, and a pleasant companion; but idle, thoughtless, and imprudent to the last degree.

John, the Irishman, soon ran away; with the rest I began to live very agreeably, for they all respected me the more, as they found Keimer incapable of instructing them, and that from me they learned something daily. My acquaintance with ingenious people in the town increased. We never worked on Saturday, that being Keimer's Sabbath, so that I had two days for reading. Keimer himself treated me with great civility and apparent regard, and nothing now made me uneasy but my debt to Vernon, which I was yet unable to pay, being hitherto but a poor economist. He, however, kindly made no demand of it.

Our printing house often wanted sorts, and there was no letter foundery in America; I had seen types cast at James' in London, but without much attention to the manner; however, I contrived a mold, and made use of the letters we had as puncheons, struck the matrices in lead, and thus supplied in a pretty tolerable way all deficiencies. I also engraved several things on occasion; made the ink; I was warehouse-man, and, in short, quite a *fac-totum*.

But, however serviceable I might be, I found that my services became every day of less importance, as the other hands improved in their business; and, when Keimer paid me a second quarter's wages, he let me know that he felt them too heavy, and thought I should make an abatement. He grew by degrees less civil, put on more the airs of master, frequently found fault, was captious, and seemed ready for an outbreaking. I went on nevertheless with a good deal of patience, thinking that his incumbered circumstances were partly the cause. At length a trifle snapped our connection; for, a great noise happening near the court house, I put my head out of the window to see what was the matter. Keimer, being in the street, looked up and saw me, called out to me, in a loud voice and angry tone, to mind my business; adding some reproachful words, that nettled me the more for their publicity; all the neighbors who were looking out on the same occasion, being witnesses how I was treated. He came up immediately into the printing house, continued the quarrel, high words passed on both sides, he gave me the quarter's warning we had stipulated, expressing a wish that he had not been obliged to so long a warning. I told him his wish was unnecessary, for I would leave him that instant; and so, taking my hat, walked out of doors, desiring Meredith, whom I saw below, to take care of some things I left, and bring them to my lodgings.

Meredith came accordingly in the evening, when we talked my affair over. He had conceived a great regard for me, and was very unwilling that I should leave the house while he remained in it. He dissuaded me from returning to my native country, which I began to think of; he reminded me, that Keimer was in debt for all he possessed, that his creditors began to be uneasy; that he kept his shop miserably, sold often without a profit for ready money, and often trusted without keeping accounts; that he must therefore fail, which would make a

vacancy I might profit of. I objected my want of money. He then let me know, that his father had a high opinion of me, and, from some discourse that had passed between them, he was sure, would advance money to set me up, if I would enter into partnership with him. "My time," said he, "will be out with Keimer in the spring; by that time we may have our press and types in from London. I am sensible I am no workman; if you like it, your skill in the business shall be set against the stock I furnish, and we will share the profits equally."

The proposal was agreeable to me, and I consented; his father was in town and approved of it; the more as he said I had great influence with his son, had prevailed on him to abstain long from dram-drinking, and he hoped, might break him of that wretched habit entirely, when we came to be so closely connected. I gave an inventory to the father, who carried it to a merchant; the things were sent for, the secret was to be kept till they should arrive, and in the mean time I was to get work, if I could, at the other printing house. But I found no vacancy there, and so remained idle a few days, when Keimer, on a prospect of being employed to print some paper money in New Jersey, which would require cuts and various types, that I only could supply, and apprehending that Bradford might engage me and get the job from him, sent me a very civil message, that old friends should not part for a few words, the effect of sudden passion, and wishing me to return. Meredith persuaded me to comply, as it would give more opportunity for his improvement under my daily instructions; so I returned, and we went on more smoothly than for some time before. The New Jersey job was obtained; I contrived a copper-plate press for it, the first that had been seen in the country; I cut several ornaments and checks for the bills. We went together to Burlington, where I executed the whole to satisfaction; and he received so large a sum

for the work as to be enabled thereby to keep himself longer from ruin.

At Burlington I made acquaintance with many principal people of the province. Several of them had been appointed by the Assembly a committee to attend the press, and take care that no more bills were printed than the law directed. They were, therefore, by turns constantly with us, and, generally, he who attended brought with him a friend or two for company. My mind having been much more improved by reading than Keimer's, I suppose it was for that reason my conversation seemed to be more valued. They had me to their houses, introduced me to their friends, and showed me much civility; while he, though the master, was a little neglected. In truth, he was an odd creature; ignorant of common life, fond of rudely opposing received opinions, slovenly to extreme dirtiness, enthusiastic in some points of religion, and a little knavish withal.

We continued there near three months; and by that time I could reckon among my acquired friends, Judge Allen, Samuel Bustill, the secretary of the province, Isaac Pearson, Joseph Cooper, and several of the Smiths, members of assembly, and Isaac Decow, the surveyor general. The latter was a shrewd, sagacious old man, who told me that he began for himself when young by wheeling clay for the brick makers, learned to write after he was of age, carried the chain for surveyors, who taught him surveying, and he had now, by his industry, acquired a good estate; and, said he, "I foresee, that you will soon work this man out of his business, and make a fortune in it at Philadelphia." He had then not the least intimation of my intention to set up there or any where. These friends were afterwards of great use to me, as I occasionally was to some of them. They all continued their regard for me as long as they lived.

Before I enter upon my public appearance in business, it may be well to let you know the then state of my mind, with regard to my principles and morals, that you may see how far those influenced the future events of my life. My parents had early given me religious impressions, and brought me through my childhood piously in the dissenting way. But I was scarce fifteen, when, after doubting by turns several points, as I found them disputed in the different books I read, I began to doubt of the revelation itself. Some books against Deism fell into my hands; they were said to be the substance of the sermons, which had been preached at Boyle's Lectures. It happened that they wrought an effect on me quite contrary to what was intended by them. For the arguments of the Deists, which were quoted to be refuted, appeared to me much stronger than the refutations; in short, I soon became a thorough Deist. My arguments perverted some others, particularly Collins and Ralph; but, each of these having wronged me greatly without the least compunction, and recollecting Keith's conduct towards me, (who was another free thinker,) and my own towards Vernon and Miss Read, which at times gave me great trouble; I began to suspect that this doctrine, though it might be true, was not very useful. My London pamphlet, printed in 1725, which had for its motto these lines of Dryden;

"Whatever is, is right. But purblind man
Sees but a part o' the chain, the nearest links;
His eyes not carrying to that equal beam,
That poises all above;"

and which from the attributes of God, his infinite wisdom, goodness, and power, concluded that nothing could possibly be wrong in the world; and that vice and virtue were empty distinctions, no such things existing; appeared now not so clever a performance as I once thought it; and I doubted whether some error had not insinuated itself

unperceived into my argument, so as to infect all that followed, as is common in metaphysical reasonings.

I grew convinced, that *truth*, *sincerity*, and *integrity*, in dealings between man and man, were of the utmost importance to the felicity of life; and I formed written resolutions, which still remain in my journal book, to practice them ever while I lived. Revelation had, indeed, no weight with me, as such; but I entertained an opinion, that, though certain actions might not be bad, *because* they were forbidden by it, or good *because* it commanded them; yet, probably, those actions might be forbidden *because* they were bad for us, or commanded *because* they were beneficial to us, in their own natures, all the circumstances of things considered. And this persuasion, with the kind hand of Providence, or some guardian angel, or accidental favorable circumstances and situations; or all together, preserved me through this dangerous time of youth, and the hazardous situations I was sometimes in among strangers, remote from the eye and advice of my father, free from any *willful* gross immorality or injustice, that might have been expected from my want of religion. I say *willful*, because the instances I have mentioned had something of *necessity* in them, from my youth, inexperience, and the knavery of others. I had, therefore, a tolerable character to begin the world with; I valued it properly, and determined to preserve it.

We had not long been returned to Philadelphia, before the new types arrived from London. We settled with Keimer, and left him by his consent before he heard of it. We found a house to let near the Market, and took it. To lessen the rent, which was then but twenty-four pounds a year, though I have since known it to let for seventy, we took in Thomas Godfrey, a glazier, and his family, who were to pay a considerable part of it to us, and we to board with them. We had scarce opened our letters and put our press in order, before George House, an acquaintance of mine, brought a countryman to us, whom

he had met in the street, inquiring for a printer. All our cash was now expended in the variety of particulars we had been obliged to procure, and this countryman's five shillings, being our first fruits, and coming so seasonably, gave me more pleasure than any crown I have since earned; and the gratitude I felt towards House has made me often more ready, than perhaps I otherwise should have been, to assist young beginners.

There are croakers in every country, always boding its ruin. Such a one there lived in Philadelphia; a person of note, an elderly man, with a wise look and a very grave manner of speaking; his name was Samuel Mickle. This gentleman, a stranger to me, stopped me one day at my door, and asked me if I was the young man who had lately opened a new printing house? Being answered in the affirmative, he said he was sorry for me, because it was an expensive undertaking, and the expense would be lost; for Philadelphia was a sinking place, the people already half bankrupts, or near being so; all the appearances of the contrary, such as new buildings and the rise of rents, being to his certain knowledge fallacious; for they were in fact the things that would ruin us. Then he gave me such a detail of misfortunes now existing, or that were soon to exist, that he left me half melancholy. Had I known him before I engaged in this business, probably I never should have done it. This person continued to live in this decaying place, and to declaim in the same strain, refusing for many years to buy a house there, because all was going to destruction; and at last I had the pleasure of seeing him give five times as much for one, as he might have bought it for when he first began croaking.

CHAPTER V.

I SHOULD have mentioned before, that, in the autumn of the preceding year, I had formed most of my ingenious acquaintance into a club for mutual improvement, which we called the JUNTO; we met on Friday evenings. The rules that I drew up required that every member in his turn should produce one or more queries on any point of morals, politics, or natural philosophy, to be discussed by the company; and once in three months produce and read an essay of his own writing, on any subject he pleased. Our debates were to be under the direction of a president, and to be conducted in the sincere spirit of inquiry after truth, without fondness for dispute, or desire of victory; and to prevent warmth, all expressions of positiveness of opinions, or direct contradiction, were after some time, made contraband, and prohibited under small pecuniary penalties.

The first members were Joseph Breintnal, a copier of deeds for the scriveners, a good natured, friendly, middle aged man, a great lover of poetry, reading all he could meet with, and writing some that was tolerable; very ingenious in making little knickknackeries, and of sensible conversation.

Thomas Godfrey, a self-taught mathematician, great in his way, and afterwards inventor of what is now called *Hadley's Quadrant*. But he knew little out of his way, and was not a pleasing companion; as, like most great mathematicians I have met with, he expected universal precision in every thing said, or was for ever denying or distinguishing upon trifles, to the disturbance of all conversation. He soon left us.

Nicholas Scull, a surveyor, afterwards surveyor general, who loved books, and sometimes made a few verses.

William Parsons, bred a shoe maker, but, loving reading, had acquired a considerable share of mathematics, which he first studied with a view to astrology, and afterwards laughed at it. He also became surveyor general.

William Maugridge, joiner, but a most exquisite mechanic, and a solid, sensible man.

Hugh Meredith, Stephen Potts, and George Webb, I have characterized before.

Robert Grace, a young gentleman of some fortune, generous, lively, and witty; a lover of punning and of his friends.

Lastly, William Coleman, then a merchant's clerk, about my age, who had the coolest, clearest head, the best heart, and the exactest morals, of almost any man I ever met with. He became afterwards a merchant of great note, and one of our provincial judges. Our friendship continued without interruption to his death, upwards of forty years; and the club continued almost as long, and was the best school of philosophy, morality, and politics, that then existed in the province; for our queries, which were read the week preceding their discussion, put us upon reading with attention on the several subjects, that we might speak more to the purpose; and here, too, we acquired better habits of conversation, every thing being studied in our rules, which might prevent our disgusting each other. Hence the long continuance of the club, which I shall have frequent occasion to speak further of hereafter.

But my giving this account of it here, is to show something of the interest I had, every one of these exerting himself in recommending business to us. Breintnal particularly procured us from the Quakers the printing of forty sheets of their history, the rest being to be done by Keimer; and upon these we worked exceedingly hard, for the price was low. It

was a folio, *pro patriâ* size, in pica, with long primer notes. I composed a sheet a day, and Meredith worked it off at press; it was often eleven at night, and sometimes later, before I had finished my distribution for the next day's work. For the little jobs sent in by our other friends now and then put us back. But, so determined I was to continue doing a sheet a day of the folio, that one night, when, having imposed my forms, I thought my day's work over, one of them by accident was broken, and two pages reduced to *pie*. I immediately distributed, and composed it over again before I went to bed; and this industry, visible to our neighbors, began to give us character and credit; particularly I was told, that mention being made of the new printing office, at the merchants' every night club, the general opinion was that it must fail, there being already two printers in the place, Keimer and Bradford; but Dr. Baird (whom you and I saw many years after at his native place, St. Andrew's, in Scotland,) gave a contrary opinion; "For the industry of that Franklin," said he, "is superior to any thing I ever saw of the kind; I see him still at work when I go home from club, and he is at work again before his neighbors are out of bed." This struck the rest, and we soon after had offers from one of them to supply us with stationery; but as yet we did not choose to engage in shop business.

I mention this industry more particularly, and the more freely, though it seems to be talking in my own praise, that those of my posterity, who shall read it may know the use of that virtue, when they see its effects in my favor throughout this relation.

George Webb, who had found a female friend that lent him wherewith to purchase his time of Keimer, now came to offer himself as a journeyman to us. We could not then employ him; but I foolishly let him know, as a secret, that I soon intended to begin a newspaper, and might then have work for him.

My hopes of success, as I told him, were founded on this; that the then only newspaper, printed by Bradford, was a paltry thing, wretchedly managed, no way entertaining, and yet was profitable to him; I, therefore, freely thought a good paper would scarcely fail of good encouragement. I requested Webb not to mention it; but he told it to Keimer, who immediately, to be beforehand with me, published proposals for one himself, on which Webb was to be employed. I was vexed at this; and, to counteract them, not being able to commence our paper, I wrote several amusing pieces for Bradford's paper, under the title of the *Busy Body*, which Breintnal continued some months. By this means the attention of the public was fixed on that paper, and Keimer's proposals, which we burlesqued and ridiculed, were disregarded. He began his paper, however; and, before carrying it on three quarters of a year, with at most only ninety subscribers, he offered it to me for a trifle; and I, having been ready some time to go on with it, took it in hand directly; and it proved, in a few years, extremely profitable to me.

I perceive that I am apt to speak in the singular number, though our partnership still continued; it may be, that, in fact, the whole management of the business lay upon me. Meredith was no compositor, a poor pressman, and seldom sober. My friends lamented my connection with him, but I was to make the best of it.

Our first papers made quite a different appearance from any before in the province; a better type, and better printed; but some remarks of my writing, on the dispute then going on between Governor Burnet, and the Massachusetts Assembly, struck the principal people, occasioned the paper and the manager of it to be much talked of, and, in a few weeks, brought them all to be our subscribers.

Their example was followed by many, and our number went on growing continually. This was one of the first good effects of my having learned a

little to scribble ; another was, that the leading men, seeing a newspaper now in the hands of those who could also handle a pen, thought it convenient to oblige and encourage me. Bradford still printed the votes and laws and other public business. He had printed an address of the House to the Governor in a coarse, blundering manner ; we reprinted it elegantly and correctly, and sent one to every member. They were sensible of the difference, it strengthened the hands of our friends in the House, and they voted us their printers for the year ensuing.

Among my friends in the House, I must not forget Mr. Hamilton, before mentioned, who was then returned from England, and had a seat in it. He interested himself for me strongly in that instance, as he did in many others afterwards, continuing his patronage till his death.

Mr. Vernon, about this time, put me in mind of the debt I owed him, but did not press me. I wrote to him an ingenuous letter of acknowledgment, craving his forbearance a little while longer, which he allowed me. As soon as I was able, I paid the principal with the interest, and many thanks ; so that *erratum* was, in some degree, corrected.

But another difficulty came upon me, which I had never the least reason to expect. Mr. Meredith's father, who was to have paid for our printing house, according to the expectations given me, was able to advance only one hundred pounds currency, which had been paid ; and a hundred more were due to the merchant, who grew impatient and sued us all. We gave bail, but saw that, if the money could not be raised in time, the suit must soon come to a judgment and execution, and our hopeful prospects must, with us, be ruined ; as the press and letters must be sold for payment, perhaps at half price.

In this distress two true friends, whose kindness I have never forgotten, nor ever shall forget while I can remember any thing, came to me separately,

unknown to each other, and, without any application from me, offered, each of them, to advance me all the money that should be necessary to enable me to take the whole business upon myself, if that should be practicable; but they did not like my continuing the partnership with Meredith; who, as they said, was often seen drunk in the street, playing at low games in ale houses, much to our discredit. These two friends were William Coleman and Robert Grace. I told them I could not propose a separation, while any prospect remained of the Merediths fulfilling their part of our agreement; because I thought myself under great obligations to them for what they had done, and would do if they could; but, if they finally failed in their performance, and our partnership must be dissolved, I should then think myself at liberty to accept the assistance of my friend.

Thus the matter rested for some time, when I said to my partner, "Perhaps your father is dissatisfied at the part you have undertaken in this affair of ours, and is unwilling to advance for you and me, what he would for you. If that is the case, tell me, and I will resign the whole to you, and go about my business." "No," said he, "my father has really been disappointed, and is really unable; and I am unwilling to distress him further. I see this is a business I am not fit for. I was bred a farmer, and it was folly in me to come to town, and put myself, at thirty years of age, an apprentice to learn a new trade. Many of our Welsh people are going to settle in North Carolina, where land is cheap. I am inclined to go with them, and follow my old employment; you may find friends to assist you. If you will take the debts of the company upon you, return to my father the hundred pounds he has advanced, pay my little personal debts, and give me thirty pounds and a new saddle, I will relinquish the partnership, and leave the whole in your hands." I agreed to this proposal;

it was drawn up in writing, signed, and sealed immediately. I gave him what he demanded, and he went soon after to Carolina; whence he sent me next year two long letters, containing the best account that had been given of that country, the climate, the soil, and husbandry, for in those matters he was very judicious. I printed them in the papers, and they gave great satisfaction to the public.

As soon as he was gone, I recurred to my two friends; and because I would not give an unkind preference to either, I took half of what each had offered and I wanted, of one, and half of the other; paid off the company's debts, and went on with the business in my own name; advertising that the partnership was dissolved. I think this was in or about the year 1729.

About this time there was a cry among the people for more paper money; only fifteen thousand pounds being extant in the province, and that soon to be sunk. The wealthy inhabitants opposed any addition, being against all paper currency, from the apprehension that it would depreciate, as it had done in New England, to the injury of all creditors. We had discussed this point in our Junto, where I was on the side of an addition; being persuaded, that the first small sum struck in 1723 had done much good by increasing the trade, employment, and number of inhabitants in the province; since I now saw all the old houses inhabited, and many new ones building; whereas I remembered well, when I first walked about the streets of Philadelphia, eating my roll, I saw many of the houses in Walnut street, between Second and Front streets, with bills on their doors, "*To be let*;" and many likewise in Chestnut street and other streets; which made me think the inhabitants of the city were one after another deserting it.

Our debates possessed me so fully of the subject, that I wrote and printed an anonymous pamphlet on

it, entitled, "*The Nature and Necessity of a Paper Currency.*" It was well received by the common people in general; but the rich men disliked it, for it increased and strengthened the clamor for more money; and, they happening to have no writers among them that were able to answer it, their opposition slackened, and the point was carried by a majority in the House. My friends there, who considered I had been of some service, thought fit to reward me, by employing me in printing the money; a very profitable job, and a great help to me. This was another advantage gained by my being able to write.

The utility of this currency became by time and experience so evident, that the principles upon which it was founded were never afterwards much disputed; so that it grew soon to fifty-five thousand pounds; and in 1739, to eighty thousand pounds; trade, building, and inhabitants all the while increasing. Though I now think there are limits, beyond which the quantity may be hurtful.

I soon after obtained, through my friend Hamilton, the printing of the Newcastle paper money, another profitable job, as I then thought it; small things appearing great to those in small circumstances; and these to me were really great advantages, as they were great encouragements. Mr. Hamilton procured for me also the printing of the laws and votes of that government; which continued in my hands as long as I followed the business.

I now opened a small stationer's shop. I had in it blanks of all kinds; the correctest that ever appeared among us. I was assisted in that by my friend Breintnal. I had also paper, parchment, chapmen's books, &c. One Whitemarsh, a compositor I had known in London, an excellent workman, now came to me, and worked with me constantly and and diligently; and I took an apprentice, the son of Aquila Rose.

I began now gradually to pay off the debt I was under for the printing house. In order to secure my credit and character as a tradesman, I took care not only to be in *reality* industrious and frugal, but to avoid the appearances to the contrary. I dressed plain, and was seen at no places of idle diversion. I never went out a fishing or shooting; a book, indeed, sometimes debauched me from my work, but that was seldom, was private, and gave no scandal; and, to show that I was not above my business, I sometimes brought home the paper I purchased at the stores, through the streets on a wheelbarrow. Thus being esteemed an industrious, thriving young man, and, paying duly for what I bought, the merchants who imported stationery solicited my custom; others proposed supplying me with books, and I went on prosperously. In the mean time, Keimer's credit and business declining daily, he was at last forced to sell his printing house, to satisfy his creditors. He went to Barbadoes, and there lived some years in very poor circumstances.

His apprentice, David Harry, whom I had instructed while I worked with him, set up in his place at Philadelphia, having bought his materials. I was, at first, apprehensive of a powerful rival in Harry, as his friends were very able, and had a good deal of interest. I, therefore, proposed a partnership to him, which he, fortunately for me, rejected with scorn. He was very proud, dressed like a gentleman, lived expensively, took much diversion and pleasure abroad, ran in debt, and neglected his business; upon which, all business left him; and, finding nothing to do, he followed Keimer to Barbadoes, taking the printing house with him. There this apprentice employed his former master as a journeyman; they quarreled often, and Harry went continually behindhand, and at length was obliged to sell his types and return to country work in Pennsylvania. The person who bought them employed Keimer to use them, but a few years after he died.

There remained now no other printer in Philadelphia, but the old Bradford; but he was rich and easy, did a little in the business by straggling hands, but was not anxious about it. However, as he held the post office, it was imagined he had better opportunities of obtaining news, his paper was thought a better distributor of advertisements than mine, and therefore had many more; which was a profitable thing to him, and a disadvantage to me. For, though I did indeed receive and send papers by the post, yet the public opinion was otherwise; for what I did send was by bribing the riders, who took them privately; Bradford being unkind enough to forbid it, which occasioned some resentment on my part; and I thought so meanly of the practice, that, when I afterwards came into his situation, I took care never to imitate it.

I had hitherto continued to board with Godfrey, who lived in a part of my house, with his wife and children, and had one side of the shop for his glazier's business, though he worked little, being always absorbed in his mathematics. Mrs. Godfrey projected a match for me, with a relation's daughter, took opportunities of bringing us often together, till a serious courtship, on my part, ensued; the girl being in herself very deserving. The old folks encouraged me by continual invitations to supper, and by leaving us together, till at length it was time to explain. Mrs. Godfrey managed our little treaty. I let her know that I expected as much money with their daughter as would pay off my remaining debt for the printing house; which, I believe, was not then above a hundred pounds. She brought me word they had no such sum to spare; I said they might mortgage their house in the loan office. The answer to this, after some days, was, that they did not approve the match; that, on inquiry of Bradford, they had been informed the printing business was not a profitable one, the types would soon be worn out and more wanted; that Keimer and David

Harry had failed one after the other, and I should probably soon follow them; and, therefore, I was forbidden the house, and the daughter was shut up.

Whether this was a real change of sentiment or only artifice, on a supposition of our being too far engaged in affection to retract, and therefore that we should steal a marriage, which would leave them at liberty to give or withhold what they pleased, I know not. But I suspected the motive, resented it, and went no more. Mrs. Godfrey brought me afterwards some more favorable accounts of their disposition, and would have drawn me on again; but I declared absolutely my resolution to have nothing more to do with that family. This was resented by the Godfreys, we differed, and they removed, leaving me the whole house, and I resolved to take no more inmates.

But this affair having turned my thoughts to marriage, I looked round me, and made overtures of acquaintance in other places; but soon found, that the business of a printer being generally thought a poor one, I was not to expect money with a wife, unless with such a one as I should not otherwise think agreeable. In the meantime, that hard to be governed passion of youth had hurried me frequently into intrigues with low women that fell in my way, which were attended with some expense and great inconvenience, besides a continual risk to my health by a distemper, which of all things I dreaded, though by great good luck I escaped it.

A friendly correspondence as neighbors had continued between me and Miss Read's family, who all had a regard for me from the time of my first lodging in their house. I was often invited there and consulted in their affairs, wherein I sometimes was of service. I pitied poor Miss Read's unfortunate situation, who was generally dejected, seldom cheerful, and avoided company. I considered my giddiness and inconstancy when in London, as, in a great degree, the cause of her unhappiness;

though the mother was good enough to think the fault more her own than mine, as she had prevented our marrying before I went thither, and persuaded the other match in my absence. Our mutual affection was revived, but there were now great objections to our union. That match was indeed looked upon as invalid, a preceding wife being said to be living in England; but this could not easily be proved, because of the distance, &c.; and, though there was a report of his death, it was not certain. Then, though it should be true, he had left many debts, which his successor might be called upon to pay. We ventured, however, over all these difficulties, and I took her to wife, September 1st, 1730. None of the inconveniences happened, that we had apprehended; she proved a good and faithful help-mate, assisted me much by attending to the shop; we throve together, and ever mutually endeavored to make each other happy. Thus I corrected that great *erratum* as well as I could.

About this time, our club meeting, not at a tavern, but in a little room of Mr. Grace's set apart for that purpose, a proposition was made by me, that, since our books were often referred to in our disquisitions upon the queries, it might be convenient to us to have them altogether where we met, that upon occasion they might be consulted; and by thus clubbing our books in a common library, we should, while we liked to keep them together, have each of us the advantage of using the books of all the other members, which would be nearly as beneficial as if each owned the whole. It was liked and agreed to, and we filled one end of the room with such books as we could best spare. The number was not so great as we expected; and, though they had been of great use, yet some inconveniences occurring for want of due care of them, the collection, after about a year, was separated, and each took his books home again.

And now I set on foot my first project of a public nature, that for a subscription library. I drew up the proposals, got them put into form by our great scrivener, Brockden, and, by the help of my friends in the Junto, procured fifty subscribers of forty shillings each to begin with, and ten shillings a year for fifty years, the term our company was to continue. We afterwards obtained a charter, the company being increased to one hundred; this was the mother of all the North American subscription libraries, now so numerous. It is become a great thing itself, and continually goes on increasing. These libraries have improved the general conversation of the Americans, made the common tradesmen and farmers as intelligent as most gentlemen from other countries, and perhaps have contributed, in some degree, to the stand so generally made throughout the colonies, in defense of their privileges.

CHAPTER VI.

At the time I established myself in Pennsylvania, there was not a good bookseller's shop in any of the colonies to the southward of Boston. In New York and Philadelphia, the printers were indeed stationers, but they sold only paper, almanacs, ballads, and a few common school books. Those who loved reading were obliged to send for their books from England. The members of the Junto had each a few. We had left the alehouse where we first met, and hired a room to hold our club in. I proposed, that we should, all of us, bring our books to that room; where they would not only be ready to consult in our conferences, but become a common benefit, each of us being at liberty to borrow such as he wished to read at home. This was accordingly done, and for some time contented us.

Finding the advantage of this little collection, I proposed to render the benefit from the books more common, by commencing a public subscription library. I drew a sketch of the plan and rules that would be necessary, and got a skillful conveyancer, Mr. Charles Brockden, to put the whole in form of articles of agreement to be subscribed; by which each subscriber engaged to pay a certain sum down for the first purchase of the books, and an annual contribution for increasing them. So few were the readers at that time in Philadelphia, and the majority of us so poor, that I was not able, with great industry, to find more than fifty persons, mostly young tradesmen, willing to pay down for this purpose forty shillings each, and ten shillings per annum.

With this little fund we began. The books were imported; the library was opened one day in the week for lending them to the subscribers, on their promissory notes to pay double the value if not duly returned. The institution soon manifested its utility, was imitated by other towns, and in other provinces. The libraries were augmented by donations; reading became fashionable; and our people, having no public amusements to divert their attention from study, became better acquainted with books; and, in a few years, were observed by strangers to be better instructed, and more intelligent than people of the same rank generally are in other countries.

When we were about to sign the above mentioned articles, which were to be binding on us, our heirs, &c., for fifty years, Mr. Brockden, the scrivener, said to us, "You are young men, but it is scarcely probable that any of you will live to see the expiration of the term fixed in the instrument." A number of us, however, are yet living; but the instrument was, after a few years, rendered null, by a charter that incorporated and gave perpetuity to the company.

The objections and reluctances I met with, in soliciting the subscriptions, made me soon feel the impropriety of presenting one's self as the proposer of any useful project, that might be supposed to raise one's reputation, in the smallest degree, above that of one's neighbors, when one has need of their assistance to accomplish that project. I, therefore, put myself as much as I could out of sight, and stated it as a scheme of a *number of friends*, who had requested me to go about and propose it to such as they thought lovers of reading. In this way my affair went on more smoothly, and I ever after practiced it on such occasions; and, from my frequent successes, can heartily recommend it. The present little sacrifice of your vanity will afterwards be amply repaid. If it remains a while uncertain

to whom the merit belongs, some one more vain than yourself may be encouraged to claim it, and then even envy will be disposed to do you justice, by plucking those assumed feathers, and restoring them to their right owner.

This library afforded me the means of improvement by constant study, for which I set apart an hour or two each day; and thus repaired, in some degree, the loss of the learned education my father once intended for me. Reading was the only amusement I allowed myself. I spent no time in taverns, games, or frolics of any kind; and my industry in my business continued as indefatigable as it was necessary. I was indebted for my printing house; I had a young family coming on to be educated, and I had two competitors to contend with for business, who were established in the place before me. My circumstances, however, grew daily easier. My original habits of frugality continuing, and my father having, among his instructions to me when a boy, frequently repeated a proverb of Solomon, "*Seest thou a man diligent in his calling, he shall stand before kings, he shall not stand before mean men,*" I thence considered industry as a means of obtaining wealth and distinction, which encouraged me; though I did not think that I should ever literally *stand before kings*, which, however, has since happened; for I have stood before *five*, and even had the honor of sitting down with one, king of Denmark, to dinner.

We have an English proverb that says, "*He that would thrive, must ask his wife.*" It was lucky for me that I had one as much disposed to industry and frugality as myself. She assisted me cheerfully in my business, folding and stitching pamphlets, tending shop, purchasing old linen rags for the paper makers, &c. We kept no idle servants, our table was plain and simple, our furniture of the cheapest. For instance, my breakfast was, for a long time, bread and milk, (no tea,) and I ate it out of

a two penny earthen porringer, with a pewter spoon. But mark how luxury will enter families, and make a progress, in spite of principle; being called one morning to breakfast, I found it in a China bowl, with a spoon of silver! They had been bought for me, without my knowledge, by my wife, and had cost her the enormous sum of three and twenty shillings; for which she had no other excuse or apology to make, but that she thought *her* husband deserved a silver spoon and China bowl as well as any of his neighbors. This was the first appearance of plate and China in our house; which afterwards, in a course of years, as our wealth increased, augmented gradually to several hundred pounds in value.

I had been religiously educated as a Presbyterian; but, though some of the dogmas of that persuasion, such as *the eternal decrees of God, election, reprobation, &c.*, appeared to me unintelligible, others doubtful, and I early absented myself from the public assemblies of the sect, Sunday being my studying day. I never was without some religious principles. I never doubted, for instance, the existence of a Deity; that he made the world and governed it by his providence; that the most acceptable service of God was the doing good to man; that our souls are immortal; and that all crimes will be punished, and virtue rewarded, either here or hereafter. These I esteemed the essentials of every religion; and, being to be found in all the religions we had in our country, I respected them all, though with different degrees of respect, as I found them more or less mixed with other articles, which, without any tendency to inspire, promote, or confirm morality, served principally to divide us, and make us unfriendly to one another. This respect to all, with an opinion that the worst had some good effects, induced me to avoid all discourse that might tend to lessen the good opinion another might have of his own religion; and, as our province increased in people, and new places

of worship were continually wanted, and generally erected by voluntary contribution, my mite for such purpose, whatever might be the sect, was never refused.

Though I seldom attended any public worship, I had still an opinion of its propriety, and of its utility when rightly conducted, and I regularly paid my annual subscription for the support of the only Presbyterian minister or meeting we had in Philadelphia. He used to visit me sometimes as a friend, and admonish me to attend his administrations; and I was now and then prevailed on to do so; once for five Sundays successively. Had he been in my opinion a good preacher, perhaps I might have continued, notwithstanding the occasion I had for the Sunday's leisure in my course of study; but his discourses were either polemic arguments, or explanations of the peculiar doctrines of our sect, and were all to me very dry, uninteresting, and unedifying; since not a single moral principle was inculcated or enforced; their aim seeming to be rather to make us *Presbyterians* than *good citizens*.

At length he took for his text that verse of the fourth chapter to the Phillipians, "*Finally, brethren, whatsoever things are true, honest, just, pure, lovely, or of good report, if there be any virtue, or any praise, think on these things.*" And I imagined, in a sermon on such a text, we could not miss of having some morality. But he confined himself to five points only, as meant by the apostle: 1. Keeping holy the Sabbath day. 2. Being diligent in reading the holy scriptures. 3. Attending duly the public worship. 4. Partaking of the sacrament. 5. Paying a due respect to God's ministers. These might be all good things; but, as they were not the kind of good things I expected from that text, I despaired of ever meeting with them from any other, was disgusted, and attended his preaching no more. I had some years before composed a little liturgy, or form of prayer, for my own private use, (in 1728,) entitled, *Articles*

of Belief and Acts of Religion. I returned to the use of this, and went no more to the public assemblies. My conduct might be blamable, but I leave it, without attempting further to excuse it; my present purpose being to relate facts, and not to make apologies for them.

It was about this time I conceived the bold and arduous project of arriving at *moral perfection*. I wished to live without committing any fault at any time, and to conquer all that either natural inclination, custom, or company, might lead me into. As I knew, or thought I knew, what was right and wrong, I did not see why I might not *always* do the one and avoid the other. But I soon found I had undertaken a task of more difficulty than I had imagined. While my attention was taken up, and care employed in guarding against one fault, I was often surprised by another; habit took the advantage of inattention; inclination was sometimes too strong for reason. I concluded at length, that the mere speculative conviction, that it was our interest to be completely virtuous, was not sufficient to prevent our slipping; and that the contrary habits must be broken, and good ones acquired and established, before we can have any dependence on a steady, uniform rectitude of conduct. For this purpose, I therefore tried the following method.

In the various enumerations of the *moral virtues*, I had met with in my reading, I found the catalogue more or less numerous, as different writers included more or fewer ideas under the same name. *Temperance*, for example, was, by some, confined to eating and drinking; while by others it was extended to mean the moderating every other pleasure, appetite, inclination, or passion, bodily or mental, even to our avarice and ambition. I proposed to myself, for the sake of clearness, to use rather more names, with fewer ideas annexed to each, than a few names with more ideas; and I included under thirteen names of virtues, all that at that time occurred to me as

necessary or desirable; and annexed to each a short precept, which fully expressed the extent I gave to its meaning.

These names of *virtues*, with their precepts, were:

1. TEMPERANCE.—Eat not to dullness; drink not to elevation.

2. SILENCE.—Speak not but what may benefit others or yourself; avoid trifling conversation.

3. ORDER.—Let all things have their places; let each part of your business have its time.

4. RESOLUTION.—Resolve to perform what you ought; perform without fail what you resolve.

5. FRUGALITY.—Make no expense but to do good to others or yourself; that is, waste nothing.

6. INDUSTRY.—Lose no time; be always employed in something useful; cut off all unnecessary actions.

7. SINCERITY.—Use no hurtful deceit; think innocently and justly; and, if you speak, speak accordingly.

8. JUSTICE.—Wrong none by doing injuries, or omitting the benefits that are your duty.

9. MODERATION.—Avoid extremes; forbear resenting injuries so much as you think they deserve.

10. CLEANLINESS.—Tolerate no uncleanness in body, clothes, or habitation.

11. TRANQUILITY.—Be not disturbed at trifles, or at accidents common or unavoidable.

12. CHASTITY.

13. HUMILITY.—Imitate Jesus and Socrates.

My intention being to acquire the *habitude* of all these virtues, I judged it would be well not to distract my attention by attempting the whole at once, but to fix it on *one* of them at a time; and when I should be master of that, then to proceed to another; and so on, till I should have gone through the thirteen. And, as the previous acquisition of some might facilitate the acquisition of certain others, I arranged them with that view, as they stand above. *Temperance* first, as it tends to procure that coolness and clearness of head, which is so necessary

where constant vigilance was to be kept up, and a guard maintained against the unremitting attraction of ancient habits, and the force of perpetual temptations. This being acquired and established, *Silence* would be more easy; and my desire being to gain knowledge at the same time that I improved in virtue, and considering that in conversation it was obtained rather by the use of the ear than of the tongue, and therefore wishing to break a habit I was getting into of prattling, punning, and jesting, which only made me acceptable to trifling company, I gave *Silence* the second place. This and the next, *Order*, I expected, would allow me more time for attending to my project and my studies. *Resolution*, once become habitual, would keep me firm in my endeavors to obtain all the subsequent virtues; *Frugality* and *Industry* relieving me from my remaining debt, and producing affluence and independence, would make more easy the practice of *Sincerity* and *Justice*, &c., &c. Conceiving then, that, agreeably to the advice of Pythagoras, in his *Golden Verses*, daily examination would be necessary, I contrived the following method for conducting that examination.

I made a little book, in which I allotted a page for each of the virtues. I ruled each page with red ink, so as to have seven columns, one for each day of the week, marking each column with a letter for the day. I crossed these columns with thirteen red lines, marking the beginning of each line with the first letter of one of the virtues; on which line, and in its proper column, I might mark, by a little black spot, every fault I found, upon examination, to have been committed respecting that virtue, upon that day.

FORM OF THE PAGES.

TEMPERANCE.

Eat not to dullness; drink not to elevation.

I determined to give a week's strict attention to each of the virtues successively. Thus, in the first week, my great guard was to avoid every, the least, offense against *Temperance*; leaving the other virtues to their ordinary chance, only marking every evening

the faults of the day. Thus, if in the first week I could keep my first line, marked T, clear of spots, I supposed the habit of that virtue so much strengthened, and its opposite weakened, that I might venture extending my attention to include the next, and for the following week keep both lines clear of spots. Proceeding thus to the last, I could get through a course complete in thirteen weeks, and four courses in a year. And like him, who, having a garden to weed, does not attempt to eradicate all the bad herbs at once, which would exceed his reach and his strength, but works on one of the beds at a time, and having accomplished the first, proceeds to a second; so I should have, I hoped, the encouraging pleasure of seeing on my pages the progress made in virtue, by clearing successively my lines of their spots; till in the end, by a number of courses, I should be happy in viewing a clean book, after a thirteen weeks' daily examination.

This my little book had for its motto, these lines from Addison's *Cato*:

"Here will I hold. If there's a power above us,
 (And that there is, all nature cries aloud
 Through all her works,) He must delight in virtue;
 And that which he delights in must be happy."

Another from Cicero:

"O vitæ Philosophia dux! O virtutum indagatrix expultrixque victorum! Unus dies, bene et ex præceptis tuis actus, peccanti immortalitati est anteponeendus."

Another from the Proverbs of Solomon, speaking of wisdom or virtue:

"Length of days is in her right hand, and in her left hand riches and honor. Her ways are ways of pleasantness, and all her paths are peace."

And conceiving God to be the fountain of wisdom, I thought it right and necessary to solicit his assistance for obtaining it; to this end I formed the following little prayer, which was prefixed to my tables of examination, for daily use.

"O powerful Goodness! bountiful Father! merciful Guide! Increase in me that wisdom, which discovers my truest interest. Strengthen my resolution to perform what that wisdom dictates. Accet my kind offices to thy other children, as the only return in my power for thy continual favors to me."

I used also, sometimes, a little prayer, which I took from Thomson's *Poems*, viz :

“Father of light and life, thou Good Supreme!
 O teach me what is good; teach me Thyself!
 Save me from folly, vanity, and vice,
 From every low pursuit; and feed my soul
 With knowledge, conscious peace, and virtue pure;
 Sacred, substantial, never fading bliss!”

The precept of *Order* requiring that *every part of my business should have its allotted time*, one page in my little book contained the following scheme of employment for the twenty-four hours of a natural day:

S C H E M E .

		Hours.

I entered upon the execution of this plan for self-examination, and continued it, with occasional intermissions, for some time. I was surprised to find

myself so much fuller of faults than I had imagined; but I had the satisfaction of seeing them diminish. To avoid the trouble of renewing now and then my little book, which, by scraping out the marks on the paper of old faults to make room for new ones in a new course, became full of holes, I transferred my tables and precepts to the ivory leaves of a memorandum book, on which the lines were drawn with red ink, that made a durable stain; and on those lines I marked my faults with a black lead pencil; which marks I could easily wipe out with a wet sponge. After awhile I went through one course only in a year; and afterwards only one in several years; till at length I omitted them entirely, being employed in voyages and business abroad, with a multiplicity of affairs, that interfered; but I always carried my little book with me.

My scheme of *Order* gave me the most trouble; and I found, that, though it might be practicable where a man's business was such as to leave him the disposition of his time, that of a journeyman printer, for instance, it was not possible to be exactly observed by a master, who must mix with the world, and often receive people of business at their own hours. Order, too, with regard to places for things, papers, &c., I found extremely difficult to acquire. I had not been early accustomed to *method*, and, having an exceedingly good memory, I was not so sensible of the inconvenience attending want of method. This article, therefore, cost me much painful attention, and my faults in it vexed me so much, and I made so little progress in amendment, and had such frequent relapses, that I was almost ready to give up the attempt, and content myself with a faulty character in that respect. Like the man, who, in buying an axe of a smith, my neighbor desired to have the whole of its surface as bright as the edge. The smith consented to grind it bright for him, if he would turn the wheel; he turned, while the smith pressed the broad face of the axe hard

and heavily on the stone, which made the turning of it very fatiguing. The man came every now and then from the wheel to see how the work went on; and at length would take his axe as it was, without further grinding. "No," said the smith, "turn on, turn on; we shall have it bright by and by; as yet it is only speckled." "Yes," said the man, "but *I think I like a speckled axe best.*" And I believe this may have been the case with many, who, having, for want of some such means as I employed, found the difficulty of obtaining good and breaking bad habits in other points of vice and virtue, have given up the struggle, and concluded that "*a speckled axe is best.*" For something, that pretended to be reason, was every now and then suggesting to me, that such extreme nicety as I exacted of myself, might be a kind of foppery in morals, which, if it were known, would make me ridiculous; that a perfect character might be attended with the inconvenience of being envied and hated; and that a benevolent man should allow a few faults in himself to keep his friends in countenance.

In truth, I found myself incorrigible with respect to *Order*; and now I am grown old, and my memory bad, I feel very sensibly the want of it. But, on the whole, though I never arrived at the perfection I had been so ambitious of obtaining, but fell far short of it, yet I was, by the endeavor, a better and a happier man than I otherwise should have been, if I had not attempted it; as those who aim at perfect writing by imitating the engraved copies, though they never reached the wished for excellence of those copies, their hand is mended by the endeavor, and is tolerable while it continues fair and legible.

It may be well my posterity should be informed, that to this little artifice, with the blessing of God, their ancestor owed the constant felicity of his life, down to his seventy-ninth year, in which this is written. What reverses may attend the remainder

is in the hand of providence; but, if they arrive, the reflection on past happiness enjoyed, ought to help his bearing them with more resignation. To *Temperance* he ascribes his long continued health, and what is still left to him of a good constitution; to *Industry* and *Frugality*, the early easiness of his circumstances and acquisition of his fortune, with all that knowledge that enabled him to be a useful citizen, and obtained for him some degree of reputation among the learned; to *Sincerity* and *Justice*, the confidence of his country, and the honorable employments it conferred upon him; and to the joint influence of the whole mass of the virtues, even in the imperfect state he was able to acquire them, all that evenness of temper, and that cheerfulness in conversation, which makes his company still sought for, and agreeable even to his young acquaintance. I hope, therefore, that some of my descendants may follow the example, and reap the benefit.

It will be remarked, that, though my scheme was not wholly without religion, there was in it no mark of any of the distinguishing tenets of any particular sect. I had purposely avoided them; for, being fully persuaded of the utility and excellency of my method, and that it might be serviceable to people in all religions, and intending some time or other to publish it, I would not have any thing in it that should prejudice any one, of any sect, against it. I proposed writing a little comment on each virtue, in which I would have shown the advantages of possessing it, and the mischiefs attending its opposite vice; I should have called my book *THE ART OF VIRTUE*, because it would have shown the means and manner of obtaining virtue, which would have distinguished it from the mere exhortation to be good, that does not instruct and indicate the means; but is like the Apostle's man of verbal charity, who, without showing to the naked or hungry, how or where they might get clothes or victuals

only exhorted them to be fed and clothed. *James* ii: 15, 16.

But it so happened, that my intention of writing and publishing this comment was never fulfilled. I had, indeed, from time to time, put down short hints of the sentiments and reasonings to be made use of in it; some of which I have still by me; but the necessary close attention to private business in the earlier part of life, and public business since, have occasioned my postponing it. For, it being connected in my mind with a *great and extensive project*, that required the whole man to execute, and which an unforeseen succession of employments prevented my attending to, it has hitherto remained unfinished.

In this piece it was my design to explain and enforce this doctrine, *that vicious actions are not hurtful because they are forbidden, but forbidden because they are hurtful*, the nature of man alone considered; that it was, therefore, every one's interest to be virtuous, who wished to be happy even in this world; and I should from this circumstance (there being always in the world a number of rich merchants, nobility, states, and princes, who have need of honest instruments for the management of their affairs, and such being so rare) have endeavored to convince young persons, that no qualities are so likely to make a poor man's fortune, as those of *probity* and *integrity*.

My list of virtues contained at first but twelve; but a Quaker friend having kindly informed me, that I was generally thought proud; that my pride showed itself frequently in conversation; that I was not content with being in the right when discussing any point, but was overbearing, and rather insolent, of which he convinced me by mentioning several instances; I determined to endeavor to cure myself if I could, of this vice or folly among the rest; and I added *Humility* to my list, giving an extensive meaning to the word.

I cannot boast of much success in acquiring the *reality* of this virtue, but I had a good deal with re-

gard to the appearance of it. I made it a rule to forbear all direct contradiction to the sentiments of others, and all positive assertion of my own. I even forbid myself, agreeably to the old laws of our Junto, the use of every word or expression in the language that imported a fixed opinion; such as *certainly, undoubtedly, &c.*, and I adopted instead of them, *I conceive, I apprehend, or I imagine*, a thing to be so or so; or it so *appears to me at present*. When another asserted something that I thought an error, I denied myself the pleasure of contradicting him abruptly, and of showing immediately some absurdity in his proposition; and, in answering, I began by observing, that, in certain cases or circumstances, his opinion would be right, but in the present case there *appeared or seemed to me* some difference, &c. I soon found the advantage of this change in my manners; the conversations I engaged in went on more pleasantly. The modest way in which I proposed my opinions, procured them a readier reception and less contradiction: I had less mortification, when I was found to be in the wrong; and I more easily prevailed with others to give up their mistakes and join with me, when I happened to be in the right.

And this mode, which I at first put on with some violence to natural inclination, became at length easy, and so habitual to me, that perhaps for the last fifty years no one has ever heard a dogmatical expression escape me. And to this habit (after my character of integrity) I think it principally owing, that I had early so much weight with my fellow citizens, when I proposed new institutions, or alterations in the old; and so much influence in public councils, when I became a member; for I was but a bad speaker, never eloquent, subject to much hesitation in my choice of words, hardly correct in language, and yet I generally carried my point.

In reality, there is perhaps no one of our natural passions so hard to subdue as *pride*. Disguise it, struggle with it, stifle it, mortify it as much as one

pleases, it is still alive, and will every now and then peep out and show itself; you will see it, perhaps, often in this history. For, even if I could conceive that I had completely overcome it, I should probably be *proud* of my *humility*.

CHAPTER VII.

HAVING mentioned a *great and extensive project*, which I had conceived, it seems proper that some account should be here given of that project and its object. Its first rise in my mind appears in the following little paper, accidentally preserved, viz:

“Observations on my reading History, in the Library, May 9th, 1731.

“That the great affairs of the world, the wars and revolutions, are carried on and effected by parties.

“That the view of these parties is their present general interest, or what they take to be such.

“That the different views of these different parties occasion all confusion.

“That while a party is carrying on a general design, each man has his particular private interest in view.

“That as soon as a party has gained its general point, each member becomes intent upon his particular interest; which, thwarting others, breaks that party into divisions, and occasions more confusion.

“That few in public affairs act from a mere view of the good of their country, whatever they may pretend; and, though their actings bring real good to their country, yet men primarily considered that their own and their country’s interest were united, and so did not act from a principle of benevolence.

“That fewer still, in public affairs, act with a view to the good of mankind.

“There seems to me, at present, to be great occasion for raising a *United Party for Virtue*, by forming the virtuous and good men of all nations into a regular body, to be governed by suitable good and wise rules, which good and wise men may probably be more unanimous in their obedience to, than common people are to common laws.

“I at present think, that whoever attempts this aright, and is well qualified, cannot fail of pleasing God, and of meeting with success.”

Revolving this project in my mind, as to be undertaken hereafter, when my circumstances should afford me the necessary leisure, I put down, from time to time, on pieces of paper, such thoughts as occurred to me respecting it. Most of these are lost; but I find one, purporting to be the substance of an intended creed, containing, as I thought, the essentials of every known religion, and being free of every thing that might shock the professors of any religion. It is expressed in these words; viz:

“That there is one God, who made all things.

“That he governs the world by his providence.

“That he ought to be worshiped by adoration, prayer, and thanksgiving.

“But that the most acceptable service to God, is doing good to man.

“That the soul is immortal.

“And that God will certainly reward virtue and punish vice, either here or hereafter.”

My ideas, at that time, were, that the sect should be begun and spread, at first, among young and single men only; that each person to be initiated should not only declare his assent to such creed, but should have exercised himself with the thirteen weeks' examination and practice of the virtues, as in the before mentioned model; that the existence of such a society should be kept a secret, till it was become considerable, to prevent solicitations for

the admission of improper persons; but that the members should, each of them, search among his acquaintance for ingenious, well disposed youths, to whom, with prudent caution, the scheme should be gradually communicated. That the members should engage to afford their advice, assistance, and support to each other in promoting one another's interest, business, and advancement in life. That, for distinction, we should be called THE SOCIETY OF THE FREE AND EASY. Free, as being, by the general practice and habits of the virtues, free from the dominion of vice; and, particularly, by the practice of industry and frugality, free from debt, which exposes a man to constraint, and a species of slavery to his creditors.

This is as much as I can now recollect of the project, except that I communicated it, in part, to two young men, who adopted it with some enthusiasm; but my then narrow circumstances, and the necessity I was under of sticking close to my business, occasioned my postponing the further prosecution of it at that time; and my multifarious occupations, public and private, induced me to continue postponing, so that it has been omitted, till I have no longer strength or activity left sufficient for such an enterprise. Though I am still of opinion it was a practicable scheme, and might have been very useful, by forming a great number of good citizens; and I was not discouraged by the seeming magnitude of the undertaking, as I have always thought, that one man of tolerable abilities, may work great changes, and accomplish great affairs among mankind, if he first forms a good plan; and, cutting off all amusements or other employments, that would divert his attention, makes the execution of that same plan his sole study and business.

In 1732, I first published my Almanac, under the name of *Richard Saunders*; it was continued by me about twenty-five years, and commonly called *Poor Richard's Almanac*. I endeavored to make it both entertaining and useful, and it accordingly

came to be in such demand, that I reaped considerable profit from it; vending annually near ten thousand. And observing that it was generally read, scarce any neighborhood in the province being without it, I considered it as a proper vehicle for conveying instruction among the common people, who bought scarcely any other books. I, therefore, filled all the little spaces, that occurred between the remarkable days in the calendar, with proverbial sentences, chiefly such as inculcated industry and frugality, as the means of procuring wealth, and thereby securing virtue; it being more difficult for a man in want to act always honestly, as, to use here one of those proverbs, *it is hard for an empty sack to stand upright*.

These proverbs, which contained the wisdom of many ages and nations, I assembled and formed into a connected discourse prefixed to the almanac of 1757, as the harangue of a wise old man to the people attending an auction. The bringing all these scattered counsels thus into a focus enabled them to make greater impression. The piece, being universally approved, was copied in all the newspapers of the American continent, reprinted in Britain on a large sheet of paper, to be stuck up in houses; two translations were made of it in France, and great numbers bought by the clergy and gentry, to distribute gratis among their poor parishioners and tenants. In Pennsylvania, as it discouraged useless expense in foreign superfluities, some thought it had its share of influence in producing that growing plenty of money, which was observable for several years after its publication.

I considered my newspaper, also, as another means of communicating instruction, and in that view frequently reprinted in it extracts from the *Spectator*, and other moral writers; and sometimes published little pieces of my own, which had been first composed for reading in our Junto. Of these are a Socratic dialogue, tending to prove, that, whatever

might be his parts and abilities, a vicious man could not properly be called a man of sense; and a discourse on self-denial, showing that virtue was not secure, till its practice became a *habitude*, and was free from the opposition of contrary inclinations. These may be found in the papers about the beginning of 1735.

In the conduct of my newspaper, I carefully excluded all libeling and personal abuse, which is of late years become so disgraceful to our country. Whenever I was solicited to insert any thing of that kind, and the writers pleaded, as they generally did, the liberty of the press; and that a newspaper was like a stage-coach, in which any one who would pay had a right to a place; my answer was, that I would print the piece separately, if desired, and the author might have as many copies as he pleased to distribute himself; but that I would not take upon me to spread his detraction; and that, having contracted with my subscribers to furnish them with what might be either useful or entertaining, I could not fill their papers with private altercation, in which they had no concern, without doing them manifest injustice. Now, many of our printers make no scruple of gratifying the malice of individuals, by false accusations of the fairest characters among ourselves, augmenting animosity even to the producing of duels; and are, moreover, so indiscreet as to print scurrilous reflections on the government of neighboring states, and even on the conduct of our best national allies, which may be attended with the most pernicious consequences. These things I mention as a caution to young printers, and that they may be encouraged not to pollute their presses, and disgrace their profession, by such infamous practices, but refuse steadily; as they may see by my example, that such a course of conduct will not, on the whole, be injurious to their interests.

In 1733, I sent one of my journeymen to Charleston, South Carolina, where a printer was wanting.

I furnished him with a press and letters, on an agreement of partnership, by which I was to receive one third of the profits of the business, paying one third of the expense. He was a man of learning, but ignorant in matters of account; and, though he sometimes made me remittances, I could get no account from him, nor any satisfactory state of our partnership while he lived. On his decease, the business was continued by his widow, who, being born and bred in Holland, where, as I have been informed, the knowledge of accounts makes a part of female education, she not only sent me as clear a statement as she could find of the transactions past, but continued to account with the greatest regularity and exactness every quarter afterwards; and managed the business with such success, that she not only reputably brought up a family of children, but, at the expiration of the term, was able to purchase of me the printing house, and establish her son in it.

I mention this affair chiefly for the sake of recommending that branch of education for our young women, as likely to be of more use to them and their children, in case of widowhood, than either music or dancing; by preserving them from losses by imposition of crafty men, and enabling them to continue, perhaps, a profitable mercantile house, with established correspondence, till a son is grown up fit to undertake and go on with it; to the lasting advantage and enriching of the family.

About the year 1734, there arrived among us a young Presbyterian preacher, named Hemphill, who delivered with a good voice, and apparently extempore, most excellent discourses; which drew together considerable numbers of different persuasions, who joined in admiring them. Among the rest, I became one of his constant hearers, his sermons pleasing me, as they had little of the dogmatical kind, but inculcated strongly the practice of virtue, or what, in the religious style, are called *good works*.

Those, however, of our congregation, who considered themselves as orthodox Presbyterians, disapproved his doctrine, and were joined by most of the old ministers, who arraigned him of heterodoxy before the synod, in order to have him silenced. I became his zealous partisan, and contributed all I could to raise a party in his favor, and combated for him awhile with some hopes of success. There was much scribbling, *pro* and *con*, upon the occasion; and finding that, though an elegant preacher, he was but a poor writer, I wrote for him two or three pamphlets, and a piece in the *Gazette*, of April, 1735. Those pamphlets, as is generally the case with controversial writings, though eagerly read at the time, were soon out of vogue, and I question whether a single copy of them now exists.

During the contest an unlucky occurrence hurt his cause exceedingly. One of our adversaries having heard him preach a sermon, that was much admired, thought he had somewhere read the sermon before, or at least a part of it. On searching, he found that part quoted at length, in one of the *British Reviews*, from a discourse of Dr. Foster's. This detection gave many of our party disgust, who, accordingly, abandoned his cause, and occasioned our more speedy discomfiture in the synod. I stuck by him, however; I rather approved his giving us good sermons composed by others, than bad ones of his own manufacture; though the latter was the practice of our common teachers. He afterwards acknowledged to me, that none of those he preached were his own; adding, that his memory was such as enabled him to retain and repeat any sermon after once reading only. On our defeat, he left us in search elsewhere of better fortune, and I quitted the congregation, never attending it after; though I continued many years my subscription for the support of its ministers.

I had begun in 1733 to study languages; I soon made myself so much a master of the French, as to

be able to read the books in that language with ease. I then undertook the Italian. An acquaintance, who was also learning it, used often to tempt me to play chess with him. Finding this took up too much of the time I had to spare for study, I at length refused to play any more, unless on this condition, that the victor in every game should have a right to impose a task, either of parts of the grammar to be got by heart, or in translations, which tasks the vanquished was to perform upon honor before our next meeting. As we played pretty equally, we thus beat one another into that language. I afterwards, with a little pains taking, acquired as much of the Spanish as to read their books also.

I have already mentioned, that I had only one year's instruction in a Latin school, and that when very young, after which I neglected that language entirely. But, when I had attained an acquaintance with the French, Italian, and Spanish, I was surprised to find, on looking over a Latin Testament, that I understood more of that language than I had imagined; which encouraged me to apply myself again to the study of it, and I met with more success, as those preceding languages had greatly smoothed my way.

From these circumstances I have thought there is some inconsistency in our common mode of teaching languages. We are told that it is proper to begin first with the Latin, and, having acquired that, it will be more easy to attain those modern languages, which are derived from it; and yet we do not begin with the Greek, in order more easily to acquire the Latin. It is true, that, if we can clamber and get to the top of a staircase without using the steps, we shall more easily gain them in descending; but certainly if we begin with the lowest, we shall with more ease ascend to the top; and I would therefore offer it to the consideration of those, who superintend the education of our youth, whether, since many of those who begin with the Latin, quit the same after spending

some years without having made any great proficiency, and what they have learned becomes almost useless, so that their time has been lost, it would not have been better to have begun with the French, proceeding to the Italian and Latin. For though after spending the same time they should quit the study of languages and never arrive at the Latin, they would, however, have acquired another tongue or two, that, being in modern use, might be serviceable to them in common life.

After ten years' absence from Boston, and having become easy in my circumstances, I made a journey thither to visit my relations; which I could not sooner afford. In returning, I called at Newport to see my brother James, then settled there with his printing house. Our former differences were forgotten, and our meeting was very cordial and affectionate. He was fast declining in health, and requested me, that, in case of his death, which he apprehended not far distant, I would take home his son, then but ten years of age, and bring him up to the printing business. This I accordingly performed, sending him a few years to school before I took him into the office. His mother carried on the business till he was grown up, when I assisted him with an assortment of new types, those of his father being in a manner worn out. Thus it was that I made my brother ample amends for the service I had deprived him of by leaving him so early.

In 1736, I lost one of my sons, a fine boy of four years old, by the small pox, taken in the common way. I long regretted him bitterly, and still regret that I had not given it to him by inoculation. This I mention for the sake of parents who omit that operation, on the supposition, that they should never forgive themselves if a child died under it; my example showing that the regret may be the same either way, and therefore that the safer should be chosen.

Our club, the Junto, was found so useful, and afforded such satisfaction to the members, that some

were desirous of introducing their friends, which could not well be done without exceeding what we had settled as a convenient number; viz, twelve. We had, from the beginning, made it a rule to keep our institution a secret, which was pretty well observed; the intention was, to avoid applications of improper persons for admittance, some of whom, perhaps, we might find it difficult to refuse. I was one of those who were against any addition to our number, but instead of it made, in writing, a proposal, that every member, separately, should endeavor to form a subordinate club, with the same rules respecting queries, &c., and without informing them of the connection with the Junto. The advantages proposed were, the improvement of so many more young citizens by the use of our institutions; our better acquaintance with the general sentiments of the inhabitants on any occasion, as the Junto member might propose what queries we should desire, and was to report to the Junto what passed at his separate club; the promotion of our particular interests in business by more extensive recommendation, and the increase of our influence in public affairs, and our power of doing good by spreading through the several clubs the sentiments of the Junto.

The project was approved, and every member undertook to form his club; but they did not all succeed. Five or six only were completed, which were called by different names, as the *Vine*, the *Union*, the *Band*. They were useful to themselves, and afforded us a good deal of amusement, information, and instruction; besides answering, in some considerable degree, our views of influencing the public on particular occasions; of which I shall give some instances, in course of time, as they happened.

My first promotion was my being chosen, in 1736, clerk of the General Assembly. The choice was made that year without opposition; but the year following, when I was again proposed, (the choice,

like that of the members, being annual,) a new member made a long speech against me, in order to favor some other candidate. I was, however, chosen, which was the more agreeable to me, as, besides the pay for the immediate service of clerk, the place gave me a better opportunity of keeping up an interest among the members, which secured to me the business of printing the votes, laws, paper money, and other occasional jobs for the public, that, on the whole, were very profitable.

I therefore did not like the opposition of this new member, who was a gentleman of fortune and education, with talents that were likely to give him, in time, great influence in the House, which, indeed, afterwards happened. I did not, however, aim at gaining his favor by paying any servile respect to him, but, after some time, took this other method. Having heard that he had in his library a certain very scarce and curious book, I wrote a note to him, expressing my desire of perusing that book, and requesting that he would do me the favor of lending it to me for a few days. He sent it immediately; and I returned it in about a week, with another note, expressing strongly the sense of the favor. When we next met in the House, he spoke to me, which he had never done before, and with great civility; and he ever after manifested a readiness to serve me on all occasions, so that we became great friends, and our friendship continued to his death. This is another instance of the truth of an old maxim I had learned, which says, "*He, that has once done you a kindness, will be more ready to do you another, than he whom you yourself have obliged.*" And it shows how much more profitable it is prudently to remove, than to resent, return and continue, inimical proceedings.

In 1737, Colonel Spotswood, late governor of Virginia, and then postmaster general, being dissatisfied with the conduct of his deputy at Philadelphia, respecting some negligence in rendering, and want of

exactness in framing, his accounts, took from him the commission and offered it to me. I accepted it readily, and found it of great advantage; for, though the salary was small, it facilitated the correspondence that improved my newspaper, increased the number demanded, as well as the advertisements to be inserted, so that it came to afford me a considerable income. My old competitor's newspaper declined proportionably, and I was satisfied without retaliating his refusal, while postmaster, to permit my papers being carried by the riders. Thus he suffered greatly from his neglect in due accounting; and I mention it as a lesson to those young men who may be employed in managing affairs for others, that they should always render accounts, and make remittances, with great clearness and punctuality. The character of observing such a conduct is the most powerful of all recommendations to new employments and increase of business.

I began now to turn my thoughts to public affairs, beginning, however, with small matters. The city watch was one of the first things that I conceived to want regulation. It was managed by the constables of the respective wards in turn; the constable summoned a number of housekeepers to attend him for the night. Those, who chose never to attend, paid him six shillings a year to be excused, which was supposed to go to hiring substitutes, but was in reality much more than was necessary for that purpose, and made the constableness a place of profit; and the constable, for a little drink, often got such ragmuffins about him as a watch, that respectable housekeepers did not choose to mix with. Walking the rounds, too, was often neglected, and most of the nights spent in tippling. I thereupon wrote a paper to be read in the Junto; representing these irregularities, but insisting more particularly on the inequality of the six shilling tax of the constable, respecting the circumstances of those who paid it; since a poor widow housekeeper, all whose property to be guarded by the

watch did not perhaps exceed the value of fifty pounds, paid as much as the wealthiest merchant, who had thousands of pounds' worth of goods in his stores.

On the whole I proposed as a more effectual watch, the hiring of proper men to serve constantly in the business; and as a more equitable way of supporting the charge, the levying a tax that should be proportioned to the property. This idea, being approved by the Junto, was communicated to the other clubs, but as originating in each of them; and though the plan was not immediately carried into execution, yet, by preparing the minds of people for the change, it paved the way for the law obtained a few years after, when the members of our clubs were grown into more influence.

About this time I wrote a paper (first to be read in the Junto, but it was afterwards published,) on the different accidents and carelessnesses by which houses were set on fire, with cautions against them, and means proposed of avoiding them. This was spoken of as a useful piece, and gave rise to a project, which soon followed it, of forming a company for the more ready extinguishing of fires, and mutual assistance in removing and securing of goods when in danger. Associates in this scheme were presently found, amounting to thirty. Our articles of agreement obliged every member to keep always in good order, and fit for use, a certain number of leathern buckets, with strong bags and baskets (for packing and transporting of goods,) which were to be brought to every fire; and we agreed about once a month to spend a social evening together, in discoursing and communicating such ideas as occurred to us upon the subject of fires, as might be useful in our conduct on such occasions.

The utility of this institution soon appeared, and many more desiring to be admitted than we thought convenient for one company, they were advised to form another, which was accordingly done; and thus

went on one new company after another, till they became so numerous as to include most of the inhabitants who were men of property; and now, at the time of my writing this, though upwards of fifty years since its establishment, that which I first formed, called the *Union Fire Company*, still subsists; though the first members are all deceased but one, who is older by a year than I am. The fines that have been paid by members for absence at the monthly meetings have been applied to the purchase of fire engines, ladders, fire hooks, and other useful implements for each company; so that I question whether there is a city in the world better provided with the means of putting a stop to beginning conflagrations; and, in fact, since these institutions, the city has never lost by fire more than one or two houses at a time, and the flames have often been extinguished before the house in which they began has been half consumed.

CHAPTER VIII.

IN 1739, arrived among us from Ireland, the Rev. Mr. Whitefield, who had made himself remarkable there as an itinerent preacher. He was at first permitted to preach in some of our churches; but the clergy, taking a dislike to him, soon refused him their pulpits, and he was obliged to preach in the fields. The multitudes of all sects and denominations that attended his sermons were enormous, and it was a matter of speculation to me, who was one of the number, to observe the extraordinary influence of his oratory on his hearers, and how much they admired and respected him, notwithstanding his common abuse of them, by assuring them, they were naturally *half beasts and half devils*. It was wonderful to see the change soon made in the manners of our inhabitants. From being thoughtless or indifferent about religion, it seemed as if all the world were growing religious, so that one could not walk through the town in an evening without hearing psalms sung in different families of every street.

And it being found inconvenient to assemble in the open air, subject to its inclemencies, the building of a house to meet in was no sooner proposed, and persons appointed to receive contributions, than sufficient sums were soon received to procure the ground, and erect the building, which was one hundred feet long and seventy broad; and the work was carried on with such spirit as to be finished in a much shorter time than could have been expected. Both house and ground were vested in trustees, expressly for the use of *any preacher of any religious persuasion*,

who might desire to say someth'ng to the people at Philadelphia; the design in building being not to accommodate any particular sect, but the inhabitants in general; so that, even if the Mufti of Constantinople were to send a missionary to preach Mahometanism to us, he would find a pulpit at his service.

Mr. Whitefield, on leaving us, went preaching all the way through the colonies to Georgia. The settlement of that province had been lately begun, but, instead of being made with hardy, industrious husbandmen, accustomed to labor, the only people fit for such an enterprise, it was with families of broken shopkeepers, and other insolvent debtors; many of indolent and idle habits, taken out of the jails, who, being set down in the woods, unqualified for clearing land, and unable to endure the hardships of a new settlement, perished in numbers, leaving many helpless children unprovided for. The sight of their miserable situation inspired the benevolent heart of Mr. Whitefield, with the idea of building an orphan house there, in which they might be supported and educated. Returning northward, he preached up this charity, and made large collections; for his eloquence had a wonderful power over the hearts and purses of his hearers, of which I myself was an instance.

I did not disapprove of the design, but, as Georgia was then destitute of materials or workmen, and it was proposed to send them from Philadelphia, at a great expense, I thought it would have been better to have built the house at Philadelphia, and brought the children to it. This I advised; but he was resolute in his first project, rejected my counsel, and I therefore refused to contribute. I happened soon after to attend one of his sermons, in the course of which I perceived he intended to finish with a collection, and I silently resolved he should get nothing from me. I had, in my pocket, a handful of copper money, three or four silver dollars, and five pistoles in gold. As he proceeded,

I began to soften, and concluded to give the copper. Another stroke of his oratory made me ashamed of that, and determined me to give the silver; and he finished so admirably, that I emptied my pocket wholly into the collectors' dish, gold and all. At this sermon there was also one of our club, who, being of my sentiments respecting the building in Georgia, and suspecting a collection might be intended, had, by precaution, emptied his pockets before he came from home. Towards the conclusion of the discourse, however, he felt a strong inclination to give, and applied to a neighbor, who stood near him, to lend him some money for the purpose. The request was fortunately made to perhaps the only man in the company, who had the firmness not to be affected by the preacher. His answer was, "At any other time, friend Hopkinson, I would lend to thee freely; but not now; for thee seems to be out of thy right senses."

Some of Mr. Whitefield's enemies affected to suppose that he would apply these collections to his own private emolument; but I, who was intimately acquainted with him, being employed in printing his Sermons and Journals, never had the least suspicion of his integrity; but am, to this day, decidedly of opinion, that he was, in all his conduct, a perfectly *honest man*; and, methinks, my testimony in his favor ought to have the more weight, as we had no religious connection. He used, indeed, sometimes to pray for my conversion, but never had the satisfaction of believing that his prayers were heard. Ours was a mere civil friendship, sincere on both sides, and lasted to his death.

The following instance will show the terms on which we stood. Upon one of his arrivals from England at Boston, he wrote to me, that he should come soon to Philadelphia, but knew not where he could lodge when there, as he understood his old friend and host, Mr. Benezet, was removed to Germantown. My answer was, "You know my house; if you can make

shift with its scanty accommodations, you will be most heartily welcome." He replied, that if I made that kind offer for *Christ's* sake, I should not miss of a reward. And I returned, "Don't let me be mistaken; it was not for *Christ's* sake, but for *your* sake." One of our common acquaintance jocosely remarked, that, knowing it to be the custom of the saints, when they received any favor, to shift the burden of the obligation from off their own shoulders, and place it in heaven, I had contrived to fix it on earth.

The last time I saw Mr. Whitefield, was in London, when he consulted me about his orphan house concern, and his purpose of appropriating it to the establishment of a college.

He had a loud and clear voice, and articulated his words so perfectly, that he might be heard and understood at a great distance; especially as his auditors observed the most perfect silence. He preached one evening from the top of the Court house steps, which are in the middle of Market street, and on the west side of Second street, which crosses it at right angles. Both streets were filled with his hearers to a considerable distance. Being among the hindmost in Market street, I had the curiosity to learn how far he could be heard, by retiring backwards down the street towards the river; and I found his voice distinct till I came near Front street, when some noise in that street obscured it. Imagining then a semicircle, of which my distance should be the radius, and that it was filled with auditors, to each of whom I allowed two square feet, I computed that he might well be heard by more than thirty thousand. This reconciled me to the newspaper accounts of his having preached to twenty-five thousand people in the fields, and to the history of generals haranguing whole armies, of which I had sometimes doubted.

By hearing him often, I came to distinguish easily between sermons newly composed, and those which he had often preached in the course of his travels.

His delivery of the latter was so improved by frequent repetition, that every accent, every emphasis, every modulation of voice, was so perfectly well turned and well placed, that, without being interested in the subject, one could not help being pleased with the discourse; a pleasure of much the same kind with that received from an excellent piece of music. This is an advantage itinerant preachers have over those who are stationary, as the latter cannot well improve their delivery of a sermon by so many rehearsals.

His writing and printing, from time to time, gave great advantage to his enemies; unguarded expressions, and even erroneous opinions, delivered in preaching, might have been afterwards explained or qualified, by supposing others that might have accompanied them; or they might have been denied; but *littera scripta manet*. Critics attacked his writings violently, and with so much appearance of reason as to diminish the number of his votaries, and prevent their increase. So that I am satisfied, that, if he had never written any thing, he would have left behind him a much more numerous and important sect; and his reputation might, in that case, have been still growing, even after his death; as, there being nothing of his writing on which to found a censure, and give him a lower character, his proselytes would be left at liberty to attribute to him as great a variety of excellences as their enthusiastic admiration might wish him to have possessed.

My business was now constantly augmenting, and my circumstances growing daily easier, my newspaper having become very profitable, as being, for a time, almost the only one in this and the neighboring provinces. I experienced, too, the truth of the observation, "*that, after getting the first hundred pounds, it is more easy to get the second;*" money itself being of a prolific nature.

The partnership at Carolina having succeeded, I was encouraged to engage in others, and to promote

several of my workmen, who had behaved well, by establishing them in printing houses in different colonies, on the same terms with that in Carolina. Most of them did well, being enabled at the end of our term, six years, to purchase the types of me and go on working for themselves, by which means several families were raised. Partnerships often finish in quarrels; but I was happy in this, that mine were all carried on and ended amicably; owing, I think, a good deal to the precaution of having very explicitly settled, in our articles, every thing to be done by or expected from each partner, so that there was nothing to dispute; which precaution I would therefore recommend to all who enter into partnerships; for, whatever esteem partners may have for, and confidence in, each other at the time of the contract, little jealousies and disgusts may arise, with ideas of inequality in the care and burden, business, &c., which are attended often with breach of friendship and of the connection; perhaps with lawsuits and other disagreeable consequences.

I had, on the whole, abundant reason to be satisfied with my being established in Pennsylvania. There were, however, some things that I regretted, there being no provision for defense, nor for a complete education of youth; no militia, nor any college. I therefore, in 1743, drew up a proposal for establishing an academy; and at that time, thinking the Rev. Richard Peters, who was out of employ, a fit person to superintend such an institution, I communicated the project to him; but he, having more profitable views in the service of the proprietors, which succeeded, declined the undertaking; and, not knowing another at that time suitable for such a trust, I let the scheme lie awhile dormant. I succeeded better the next year, 1744, in proposing and establishing a *Philosophical Society*. The paper I wrote for that purpose will be found among my writings; if not lost with many others.

With respect to defense, Spain having been several years at war against Great Britain, and being at length joined by France, which brought us into great danger; and the labored and long continued endeavor of our governor, Thomas, to prevail with our Quaker Assembly, to pass a militia law, and make other provisions for the security of the province, having proved abortive; I proposed to try what might be done by a voluntary subscription of the people. To promote this, I first wrote and published a pamphlet, entitled, *PLAIN TRUTH*, in which I stated our helpless situation in strong lights, with the necessity of union and discipline for our defense, and promised to propose in a few days an association, to be generally signed for that purpose. The pamphlet had a sudden and surprising effect. I was called upon for the instrument of association. Having settled the draft of it with a few friends, I appointed a meeting of the citizens in the large building before mentioned. The house was pretty full; I had prepared a number of printed copies, and provided pens and ink dispersed all over the room. I harangued them a little on the subject, read the paper, explained it, and then distributed the copies, which were eagerly signed, not the least objection being made.

When the company separated, and the papers were collected, we found above twelve hundred signatures; and, other copies being dispersed in the country, the subscribers amounted at length to upwards of ten thousand. These all furnished themselves as soon as they could with arms, formed themselves into companies and regiments, chose their own officers, and met every week to be instructed in the manual exercise, and other parts of military discipline. The women, by subscriptions among themselves, provided silk colors, which they presented to the companies, painted with different devices and mottoes, which I supplied.

The officers of the companies composing the Philadelphia regiment, being met, chose me for their

colonel; but, conceiving myself unfit, I declined that station, and recommended Mr. Lawrence, a fine person, and a man of influence, who was accordingly appointed. I then proposed a lottery to defray the expense of building a battery below the town, and furnished with cannon. It filled expeditiously, and the battery was soon erected, the merlons being framed of logs, and filled with earth. We bought some old cannon from Boston; but, these not being sufficient, we wrote to London for more; soliciting at the same time our Proprietaries for some assistance, though without much expectation of obtaining it.

Meanwhile Colonel Lawrence, Mr. Allen, Abraham Taylor, and myself were sent to New York by the associators, commissioned to borrow some cannon of Governor Clinton. He at first refused us peremptorily; but at a dinner with his council, where there was great drinking of Madeira wine, as the custom of that place then was, he softened by degrees, and said he would lend us six. After a few more bumpers he advanced to ten; and at length he very good naturedly conceded eighteen. They were fine cannon, eighteen-pounders, with their carriages, which were soon transported and mounted on our batteries; where the associators kept a nightly guard, while the war lasted; and among the rest I regularly took my turn of duty there as a common soldier.

My activity in these operations was agreeable to the Governor and Council; they took me into confidence, and I was consulted by them in every measure where their concurrence was thought useful to the Association. Calling in the aid of religion, I proposed to them the proclaiming a fast, to promote reformation, and implore the blessing of Heaven on our undertaking. They embraced the motion; but, as it was the first fast ever thought of in the province, the secretary had no precedent from which to draw the proclamation. My education in New England, where a fast is proclaimed every year, was here of some advantage; I drew it in the accustomed

style; it was translated into German, printed in both languages, and circulated through the province. This gave the clergy of different sects an opportunity of influencing their congregations to join the Association, and it would probably have been general among all but the Quakers, if the peace had not soon intervened.

It was thought by some of my friends, that, by my activity in these affairs, I should offend that sect, and thereby lose my interest in the Assembly of the province, where they formed a great majority. A young man, who had likewise some friends in the Assembly, and wished to succeed me as their clerk, acquainted me, that it was decided to displace me at the next election; and he, through good will, advised me to resign, as more consistent with my honor than being turned out. My answer to him was, that I had read or heard of some public man, who made it a rule, never to ask for an office, and never to refuse one when offered to him. "I approve," said I, "of this rule, and shall practice it with a small addition; I shall never *ask*, never *refuse*, nor ever *RESIGN* an office. If they will have my office of clerk, to dispose of it to another, they shall take it from me. I will not, by giving it up, lose my right of some time or other making reprisal on my adversaries." I heard, however, no more of this; I was chosen again unanimously as clerk at the next election. Possibly, as they disliked my late intimacy with the members of Council, who had joined the governors in all the disputes about military preparations, with which the House had long been harrassed, they might have been pleased if I would voluntarily have left them; but they did not care to displace me on account merely of my zeal for the Association, and they could not well give another reason.

Indeed, I had some cause to believe, that the defense of the country was not disagreeable to any of them, provided they were not required to assist in it. And I found that a much greater number

of them than I could have imagined, though against *offensive* war, were clearly for the *defensive*. Many pamphlets, *pro* and *con*, were published on the subject, and some by good Quakers, in favor of *defense*; which, I believe, convinced most of their young people.

A transaction in our fire company gave me some insight into their prevailing sentiments. It had been proposed, that we should encourage the scheme for building a battery, by laying out the present stock, then about sixty pounds, in tickets of the lottery. By our rules no money could be disposed of till the next meeting after the proposal. The company consisted of thirty members, of whom twenty-two were Quakers, and eight only of other persuasions. We eight punctually attended the meeting; but, though we thought that some of the Quakers would join us, we were by no means sure of a majority. Only one Quaker, Mr. James Morris, appeared to oppose the measure. He expressed much sorrow that it had ever been proposed, as he said *Friends* were all against it, and it would create such discord as might break up the company. We told him that we saw no reason for that; we were the minority, and if *Friends* were against the measure, and out-voted us, we must, and should, agreeably to the usage of all societies, submit. When the hour for business arrived, it was moved to put this to the vote; he allowed we might do it by the rules, but, as he could assure us that a number of members intended to be present for the purpose of opposing it, it would be but candid to allow a little time for their appearing.

While we were disputing this, a waiter came to tell me, that two gentlemen below desired to speak with me. I went down, and found there two of our Quaker members. They told me, there were eight of them assembled at a tavern just by; that they were determined to come and vote with us, if there should be occasion, which they hoped would

not be the case, and desired we would not call for their assistance, if we could do without it; as their voting for such a measure might embroil them with their elders and friends. Being thus secure of a majority, I went up, and, after a little seeming hesitation, agreed to a delay of another hour. This Mr. Morris allowed to be extremely fair. Not one of his opposing friends appeared, at which he expressed great surprise; and, at the expiration of the hour, we carried the resolution eight to one; and as, of the twenty-two Quakers, eight were ready to vote with us, and thirteen by their absence manifested that they were not inclined to oppose the measure, I afterwards estimated the proportion of Quakers sincerely against defense as one to twenty-one only. For these were all regular members of the society, and in good reputation among them, and who had notice of what was proposed at that meeting.

The honorable and learned Mr. Logan, who had always been of that sect, wrote an address to them, declaring his approbation of *defensive* war, and supported his opinion by many strong arguments. He put into my hands sixty pounds, to be laid out in lottery tickets for the battery, with directions to apply what prizes might be drawn wholly to that service. He told me the following anecdote of his old master, William Penn, respecting defense. He came over from England, when a young man, with that proprietary, and as his secretary. It was war time, and their ship was chased by an armed vessel, supposed to be an enemy. Their captain prepared for defense; but told William Penn, and his company of Quakers, that he did not expect their assistance, and they might retire into the cabin; which they did, except James Logan, who chose to stay upon deck, and was quartered to a gun. The supposed enemy proved a friend, so there was no fighting; but when the secretary went down to communicate the intelligence, William Penn rebuked him severely for staying upon deck, and under-

taking to assist in defending the vessel, contrary to the principles of Friends; especially as it had not been required by the captain. This reprimand, being before all the company, piqued the secretary, who answered: "I being thy servant, why did thee not order me to come down? But thee was willing enough that I should stay and help to fight the ship, when thee thought there was danger."

My being many years in the Assembly, a majority of which were constantly Quakers, gave me frequent opportunities of seeing the embarrassment given them by their principle against war, whenever application was made to them, by order of the crown, to grant aids for military purposes. They were unwilling to offend government, on the one hand, by a direct refusal; and their friends, the body of the Quakers, on the other, by a compliance contrary to their principles; using a variety of evasions to avoid complying, and modes of disguising the compliance, when it became unavoidable. The common mode at last was, to grant money under the phrase of its being "*for the king's use,*" and never to inquire how it was applied.

But, if the demand was not directly from the crown, that phrase was not found so proper, and some other was to be invented. Thus, when powder was wanting, (I think it was for the garrison at Louisburg,) and the government of New England solicited a grant of some from Pennsylvania, which was much urged on the House by Governor Thomas, they would not grant money to buy *powder*, because that was an ingredient of war; but they voted an aid to New England of three thousand pounds, to be put into the hands of the Governor, and appropriated it for the purchase of bread, flour, wheat, or *other grain*. Some of the Council, desirous of giving the House still further embarrassment, advised the Governor not to accept provision, as not being the thing he had demanded; but he replied, "I shall take the money, for I understand very well their

meaning; *other grain* is gunpowder;" which he accordingly bought, and they never objected to it.

It was in allusion to this fact, that, when in our fire company we feared the success of our proposal in favor of the lottery, and I had said to a friend of mine, one of our members, "If we fail, let us move the purchase of a fire engine with the money; the Quakers can have no objection to that; and then, if you nominate me, and I you, as a committee for that purpose, we will buy a great gun, which is certainly a *fire engine*;" "I see," said he, "you have improved by being so long in the Assembly; your equivocal project would be just a match for their wheat or *other grain*."

Those embarrassments that the Quakers suffered, from having established and published it as one of their principles, that no kind of war was lawful, and which, being once published, they could not afterwards, however they might change their minds, easily get rid of, reminds me of what I think a more prudent conduct in another sect among us; that of the Dunkers. I was acquainted with one of its founders, Michael Weffare, soon after it appeared. He complained to me, that they were grievously calumniated by the zealots of other persuasions, and charged with abominable principles and practices, to which they were utter strangers. I told him this had always been the case with new sects, and that, to put a stop to such abuse, I imagined it might be well to publish the articles of their belief, and the rules of their discipline. He said that it had been proposed among them, but not agreed to, for this reason: "When we were first drawn together as a society," said he, "it had pleased God to enlighten our minds so far as to see that some doctrines, which were esteemed truths, were errors; and that others, which we had esteemed errors, were real truths. From time to time, He has been pleased to afford us further light, and our principles have been improving, and our errors diminishing. Now we are not sure, that we are arrived at

the end of this progression, and at the perfection of spiritual or theological knowledge; and we fear, that, if we should once print our confession of faith, we should feel ourselves as if bound and confined by it, and perhaps be unwilling to receive further improvement; and our successors still more so, as conceiving what their elders and founders had done to be something sacred, never to be departed from."

This modesty in a sect is, perhaps, a singular instance in the history of mankind, every other sect supposing itself in possession of all truth, and that those who differ are so far in the wrong; like a man traveling in foggy weather; those at some distance before him on the road he sees wrapped up in the fog, as well as those behind him, and also the people in the fields on each side; but near him all appears clear; though in truth he is as much in the fog as any of them. To avoid this kind of embarrassment, the Quakers have of late years been gradually declining the public service in the Assembly and in the magistracy, choosing rather to quit their power than their principle.

In order of time, I should have mentioned before, that having, in 1742, invented an open stove for the better warming of rooms, and at the same time saving fuel, as the fresh air admitted was warmed in entering, I made a present of the model to Mr. Robert Grace, one of my early friends, who, having an iron furnace, found the casting of the plates for these stoves a very profitable thing, as they were growing in demand. To promote that demand, I wrote and published a pamphlet, entitled, "An account of the new-invented Pennsylvania Fire-places; wherein their construction and manner of operation are particularly explained; their advantages above every other method of warming rooms demonstrated; and all objections that have been raised against the use of them, answered and obviated," &c. This pamphlet had a good effect; Governor Thomas was so pleased with the construction of this stove, as described

in it, that he offered to give me a patent for the sole vending of them for a term of years; but I declined it, from a principle which has ever weighed with me on such occasions, viz: *That, as we enjoy great advantages from the inventions of others, we should be glad of an opportunity to serve others by any invention of ours; and this we should do freely and generously.*

An ironmonger in London, however, assuming a good deal of my pamphlet, and working it up into his own, and making some small changes in the machine, which rather hurt its operation, got a patent for it there, and made, as I was told, a little fortune by it. And this is not the only instance of patents taken out of my inventions by others, though not always with the same success; which I never contested, as having no desire of profiting by patents myself, and hating disputes. The use of these fire places in very many houses, both here in Pennsylvania, and the neighboring states, has been, and is, a great saving of wood to the inhabitants.

CHAPTER IX.

PEACE being concluded, and the association business therefore at an end, I turned my thoughts again to the affair of establishing an academy. The first step I took was to associate in the design a number of active friends, of whom the Junto furnished a good part; the next was to write and publish a pamphlet, entitled, *Proposals relating to the Education of Youth in Pennsylvania*. This I distributed among the principal inhabitants gratis; and as soon as I could suppose their minds a little prepared by the perusal of it, I set on foot a subscription for opening and supporting an academy; it was to be paid in quotas yearly for five years; by so dividing it, I judged the subscription might be larger; and I believe it was so, amounting to no less, if I remember right, than five thousand pounds.

In the introduction to these proposals, I stated their publication not as an act of mine, but of some *public-spirited gentlemen*; avoiding, as much as I could, according to my usual rule, the presenting myself to the public as the author of any scheme for their benefit.

The subscribers, to carry the project into immediate execution, chose out of their number twenty-four trustees, and appointed Mr. Francis, then attorney-general, and myself, to draw up constitutions for the government of the academy; which being done and signed, a house was hired, masters engaged, and the schools opened; I think in the same year, 1749.

The scholars increasing fast, the house was soon found too small, and we were looking out for a piece

of ground, properly situated, with intent to build, when accident threw into our way a large house ready built, which, with a few alterations, might well serve our purpose. This was the building before mentioned, erected by the hearers of Mr. Whitefield, and was obtained for us in the following manner.

It is to be noted, that, the contributions to this building being made by people of different sects, care was taken in the nomination of trustees, in whom the building and ground were to be vested, that a predominancy should not be given to any sect, lest in time that predominancy might be a means of appropriating the whole to the use of such sect, contrary to the original intention. It was for this reason that one of each sect was appointed, viz: one Church-of-England man, one Presbyterian, one Baptist, one Moravian, &c., who, in case of vacancy by death, were to fill it by election from among the contributors. The Moravian happened not to please his colleagues, and on his death they resolved to have no other of that sect. The difficulty then was, how to avoid having two of some other sect, by means of the new choice.

Several persons were named, and, for that reason, not agreed to. At length one mentioned me, with the observation, that I was merely an honest man, and of *no sect* at all, which prevailed with them to choose me. The enthusiasm which existed when the house was built, had long since abated, and its trustees had not been able to procure fresh contributions for paying the ground rent, and discharging some other debts the building had occasioned, which embarrassed them greatly. Being now a member of both boards of trustees, that for the building, and that for the academy, I had a good opportunity of negotiating with both, and brought them finally to an agreement, by which the trustees for the building were to cede it to those of the academy; the latter undertaking to discharge the debt, to keep forever open in the building a large hall for occasional

preachers, according to the original intention, and maintain a free school for the instruction of poor children. Writings were accordingly drawn; and, on paying the debts, the trustees of the academy were put in possession of the premises; and, by dividing the great and lofty hall into stories and different rooms, above and below, for the several schools, and purchasing some additional ground, the whole was soon made fit for our purpose, and the scholars removed into the building. The whole care and trouble of agreeing with the workmen, purchasing materials, and superintending the work, fell upon me; and I went through it the more cheerfully, as it did not then interfere with my private business; having the year before taken a very able, industrious, and honest partner, Mr. Dayid Hall, with whose character I was well acquainted, as he had worked for me four years. He took off my hands all care of the printing office, paying me punctually my share of the profits. This partnership continued eighteen years, successfully for us both.

The trustees of the academy, after a while, were incorporated by a charter from the governor; their funds were increased by contributions in Britain, and grants of land from the Proprietaries, to which the Assembly has since made considerable addition; and thus was established the present University of Philadelphia. I have been continued one of its trustees from the beginning, now near forty years, and have had the very great pleasure of seeing a number of the youth, who have received their education in it, distinguished by their improved abilities, serviceable in public stations, and ornaments to their country.

When I was disengaged myself, as above mentioned, from private business, I flattered myself that, by the sufficient though moderate fortune I had acquired, I had found leisure during the rest of my life for philosophical studies and amusements. I purchased all Dr. Spence's apparatus, who had come from England to lecture in Philadelphia, and I

proceeded in my electrical experiments with great alacrity; but the public, now considering me as a man of leisure, laid hold of me for their purposes; every part of our civil government, and almost at the same time, imposing some duty upon me. The governor put me into the commission of the peace; the corporation of the city chose me one of the common council, and soon after alderman; and the citizens at large elected me a burgess to represent them in the Assembly. This latter station was the more agreeable to me, as I grew, at length, tired with sitting there to hear the debates, in which, as clerk, I could take no part; and which were often so uninteresting, that I was induced to amuse myself with making magic squares or circles, or any thing to avoid weariness; and I conceived my becoming a member would enlarge my power of doing good. I would not however insinuate, that my ambition was not flattered by all these promotions; it certainly was, for, considering my low beginning, they were great things to me; and they were still more pleasing, as being so many spontaneous testimonies of the public good opinion, and by me entirely unsolicited.

The office of justice of the peace I tried a little, by attending a few courts, and sitting on the bench to hear causes; but finding that more knowledge of the common law than I possessed was necessary to act in that station with credit, I gradually withdrew from it; excusing myself by being obliged to attend the higher duties of a legislator in the Assembly. My election to this trust was repeated every year for ten years, without my ever asking any elector for his vote, or signifying, either directly or indirectly, any desire of being chosen. On taking my seat in the House, my son was appointed their clerk.

The year following, a treaty being to be held with the Indians at Carlisle, the governor sent a message to the House, proposing that they should nominate some of their members, to be joined with some members of council, as commissioners for that

purpose. The House named the Speaker (Mr. Norris) and myself; and, being commissioned, we went to Carlisle, and met the Indians accordingly.

As those people are extremely apt to get drunk, and, when so, are very quarrelsome and disorderly, we strictly forbade the selling any liquor to them; and, when they complained of this restriction, we told them, that, if they would continue sober during the treaty, we would give them plenty of rum when the business was over. They promised this, and they kept their promise, because they could get no rum, and the treaty was conducted very orderly, and concluded to mutual satisfaction. They then claimed and received the rum; this was in the afternoon; they were near one hundred men, women, and children, and were lodged in temporary cabins, built in the form of a square, just without the town.

In the evening, hearing a great noise among them, the commissioners walked to see what was the matter. We found they had made a great bonfire in the middle of the square; they were all drunk, men and women, quarreling and fighting. Their dark-colored bodies, half-naked, seen only by the gloomy light of the bonfire, running after and beating one another with firebrands, accompanied by their horrid yellings, formed a scene the most resembling our ideas of hell that could well be imagined; there was no appeasing the tumult, and we retired to our lodging. At midnight a number of them came thundering at our door, demanding more rum, of which we took no notice.

The next day, sensible they had misbehaved, in giving us that disturbance, they sent three of their old counselors to make their apology. The orator acknowledged the fault, but laid it upon the rum; and then endeavored to excuse the rum, by saying, "The Great Spirit, who made all things, made every thing for some use, and whatever use he designed any thing for, that use it should always be put to. Now, when he made rum, he said, '*Let this be for*

the Indians to get drunk with ;' and it must be so." And, indeed, if it be the design of providence to extirpate these savages, in order to make room for the cultivators of the earth, it seems not impossible that rum may be the appointed means. It has already annihilated all the tribes who formerly inhabited the seacoast.

In 1751, Dr. Thomas Bond, a particular friend of mine, conceived the idea of establishing a hospital in Philadelphia, (a very beneficent design, which has been ascribed to me, but was originally and truly his,) for the reception and cure of poor sick persons, whether inhabitants of the province or strangers. He was zealous and active in endeavoring to procure subscriptions for it; but, the proposal being a novelty in America, and, at first, not well understood, he met with but little success.

At length he came to me with the compliment, that he found there was no such a thing as carrying a public spirited project through without my being concerned in it. "For," said he, "I am often asked by those to whom I propose subscribing, *Have you consulted Franklin on this business? And what does he think of it?* And when I tell them, that I have not, supposing it rather out of your line, they do not subscribe, but say, *they will consider it.*" I inquired into the nature and probable utility of this scheme, and, receiving from him a very satisfactory explanation, I not only subscribed to it myself, but engaged heartily in the design of procuring subscriptions from others. Previously, however, to the solicitation, I endeavored to prepare the minds of the people, by writing on the subject in the newspapers, which was my usual custom in such cases, but which Dr. Bond had omitted.

The subscriptions afterwards were more free and generous; but, beginning to flag, I saw they would be insufficient without some assistance from the Assembly, and, therefore, proposed to petition for it which was done. The country members did not,

at first, relish the project; they objected that it could only be serviceable to the city, and therefore, the citizens alone should be at the expense of it; and they doubted whether the citizens themselves generally approved of it. My allegation, on the contrary, that it met with such approbation as to leave no doubt of our being able to raise two thousand pounds by voluntary donations, they considered as a most extravagant supposition, and utterly impossible.

On this I formed my plan; and, asking leave to bring in a bill for incorporating the contributors according to the prayer of their petition, and granting them a blank sum of money, which leave was obtained chiefly on the consideration, that the House could throw the bill out if they did not like it; I drew it so as to make the important clause a conditional one; viz: "And be it enacted, by the authority aforesaid, that, when the said contributors shall have met and chosen their managers and treasurer, and shall have raised, by their contributions, a capital stock of two thousand pounds' value. (the yearly interest of which is to be applied to the accommodation of the sick poor in the said hospital, and of charge for diet, attendance, advice, and medicines,) and *shall make the same appear to the satisfaction of the Speaker of the Assembly for the time being*; that then it shall and may be lawful for the said Speaker, and he is hereby required, to sign an order on the provincial treasurer, for the payment of two thousand pounds, in two yearly payments, to the treasurer of the said hospital, to be applied to the founding, building, and finishing of the same."

This condition carried the bill through; for the members, who had opposed the grant, and now conceived they might have the credit of being charitable, without the expense, agreed to its passage; and then, in soliciting subscriptions among the people, we urged the conditional promise of the law

as an additional motive to give, since every man's donation would be doubled; thus the clause worked both ways. The subscriptions accordingly soon exceeded the requisite sum, and we claimed and received the public gift, which enabled us to carry the design into execution. A convenient and handsome building was soon erected; the institution has by constant experience been found useful, and flourishes to this day; and I do not remember any of my political manœuvres, the success of which at the time gave me more pleasure; or wherein, after thinking of it, I more easily excused myself for having made some use of cunning.

It was about this time that another projector, the Reverend Gilbert Tennent, came to me with a request, that I would assist him in procuring a subscription for erecting a new meeting house. It was to be for the use of a congregation he had gathered among the the Presbyterians, who were originally disciples of Mr. Whitefield. Unwilling to make myself disagreeable to my fellow citizens, by too frequently soliciting their contributions, I absolutely refused. He then desired I would furnish him with a list of the names of persons I knew by experience to be generous and public spirited. I thought it would be unbecoming in me, after their kind compliance with my solicitations, to mark them out to be worried by other beggars, and therefore refused to give such a list. He then desired I would at least give him my advice. "That I will readily do," said I; "and, in the first place, I advise you to apply to all those, who you know will give something; next to those who you are uncertain whether they will give any thing or not, and show them the list of those who have given; and lastly, do not neglect those, who you are sure will give nothing; for in some of them you may be mistaken." He laughed and thanked me, and said he would take my advice. He did so, for he asked of everybody; and he obtained a much larger sum than he expected, with which he erected the capa-

cious and elegant meeting house that stands in Arch street.

Our city, though laid out with a beautiful regularity, the streets large, straight, and crossing each other at right angles, had the disgrace of suffering those streets to remain long unpaved, and in wet weather the wheels of heavy carriages ploughed them into a quagmire, so that it was difficult to cross them; and in dry weather the dust was offensive. I had lived near what was called the Jersey Market, and saw with pain the inhabitants wading in mud, while purchasing their provisions. A strip of ground down the middle of that market was at length paved with brick, so that, being once in the market, they had firm footing; but were often over shoes in dirt to get there. By talking and writing on the subject, I was at length instrumental in getting the street paved with stone between the market and the brick foot pavement, that was on the side next the houses. This, for some time, gave an easy access to the market dry-shod; but, the rest of the street not being paved, whenever a carriage came out of the mud upon this pavement, it shook off and left its dirt upon it, and it was soon covered with mire, which was not removed; the city as yet having no scavengers.

After some inquiry, I found a poor industrious man, who was willing to undertake keeping the pavement clean, by sweeping it twice a week, carrying off the dirt from before all the neighbors' doors, for the sum of sixpence per month, to be paid by each house. I then wrote and printed a paper, setting forth the advantages to the neighborhood, that might be obtained from this small expense; the greater ease in keeping our houses clean, so much dirt not being brought in by people's feet; the benefit to the shops by more custom, as buyers could more easily get at them; and by not having, in windy weather, the dust blown in upon their goods, &c., &c. I sent one of these papers to each house, and in a day or two went round to see who would subscribe an agree-

ment to pay these sixpences; it was unanimously signed, and for a time well executed. All the inhabitants of the city were delighted with the cleanliness of the pavement that surrounded the market, it being a convenience to all, and this raised a general desire to have all the streets paved; and made the people more willing to submit to a tax for that purpose.

After some time I drew a bill for paving the city, and brought it into the Assembly. It was just before I went to England, in 1757, and did not pass till I was gone, and then with an alteration in the mode of assessment, which I thought not for the better; but with an additional provision for lighting as well as paving the streets, which was a great improvement. It was by a private person, the late Mr. John Clifton, giving a sample of the utility of lamps, by placing one at his door, that the people were first impressed with the idea of lighting all the city. The honor of this public benefit has also been ascribed to me, but it belongs truly to that gentleman. I did but follow his example, and have only some merit to claim respecting the form of our lamps, as differing from the globe lamps we were at first supplied with from London. They were found inconvenient in these respects: they admitted no air below; the smoke, therefore, did not readily go out above, but circulated in the globe, lodged on its inside, and soon obstructed the light they were intended to afford, giving, besides, the daily trouble of wiping them clean; and an accidental stroke on one of them would demolish it, and render it totally useless. I therefore suggested the composing them of four flat panes, with a long funnel above to draw up the smoke, and crevices admitting the air below to facilitate the ascent of the smoke; by this means they were kept clean, and did not grow dark in a few hours, as the London lamps do, but continued bright till morning: and an accidental stroke would generally break but a single pane, easily repaired.

I have sometimes wondered that the Londoners did not, from the effect holes in the bottom of the globe lamps used at Vauxhall have in keeping them clean, learn to have such holes in their street lamps. But, these holes being made for another purpose, viz. to communicate flame more suddenly to the wick by a little flax hanging down through them, the other use, of letting in air, seems not to have been thought of; and, therefore, after the lamps have been lit a few hours, the streets of London are very poorly illuminated.

The mention of these improvements puts me in mind of one I proposed, when in London, to Dr. Fothergill, who was among the best men I have known, and a great promoter of useful projects. I had observed, that the streets, when dry, were never swept, and the light dust carried away; but it was suffered to accumulate till wet weather reduced it to mud; and then, after lying some days so deep on the pavement that there was no crossing but in paths kept clean by poor people with brooms, it was with great labor raked together and thrown up into carts, open above, the sides of which suffered some of the slush, at every jolt on the pavement, to shake out and fall; sometimes to the annoyance of foot passengers. The reason given for not sweeping the dusty streets, was, that the dust would fly into the windows of shops and houses.

An accidental occurrence had instructed me how much sweeping might be done in a little time. I found at my door in Craven street, one morning, a poor woman sweeping my pavement with a birch broom; she appeared very pale and feeble, as just come out of a fit of sickness. I asked who employed her to sweep there; she said, "Nobody; but I am poor and in distress, and I sweeps before gentlefolk-esses doors, and hopes they will give me something." I bid her sweep the whole street clean, and I would give her a shilling; this was at nine o'clock; at noon she came for the shilling. From the slowness I saw

at first in her working, I could scarce believe that the work was done so soon, and sent my servant to examine it, who reported that the whole street was swept perfectly clean, and all the dust placed in the gutter which was in the middle; and the next rain washed it quite away, so that the pavement and even the kennel were perfectly clean.

I then judged, that, if that feeble woman could sweep such a street in three hours, a strong active man might have done it in half the time. And here let me remark, the convenience of having but one gutter in such a narrow street running down its middle instead of two, one on each side near the footway. For where all the rain that falls on a street runs from the sides and meets in the middle, it forms there a current strong enough to wash away all the mud it meets with; but, when divided into two channels, it is often too weak to cleanse either, and only makes the mud it finds more fluid; so that the wheels of carriages and feet of horses throw and dash it upon the foot pavement, which is thereby rendered foul and slippery, and sometimes splash it upon those who are walking. My proposal, communicated to the Doctor, was as follows:

“For the more effectually cleaning and keeping clean the streets of London and Westminster, it is proposed, that the several watchmen be contracted with to have the dust swept up in dry seasons, and the mud raked up at other times, each in the several streets and lanes of his round; that they be furnished with brooms and other proper instruments for these purposes, to be kept at their respective stands, ready to furnish the poor people they may employ in the service.

“That in the dry summer months the dust be all swept up into heaps at proper distances, before the shops and windows of houses are usually opened; when scavengers, with close covered carts, shall also carry it all away.

“That the mud, when raked up, be not left in

heaps to be spread abroad again by the wheels of carriages and trampling off horses; but that the scavengers be provided with bodies of carts, not placed high upon wheels, but low upon sliders, with lattice bottoms, which, being covered with straw, will retain the mud thrown into them, and permit the water to drain from it; whereby it will become much lighter, water making the greatest part of the weight. These bodies of carts to be placed at convenient distances, and the mud brought to them in wheelbarrows; they remaining where placed till the mud is drained, and then horses brought to draw them away."

I have since had doubts of the practicability of the latter part of this proposal, in all places, on account of the narrowness of some streets, and the difficulty of placing the draining sleds, so as not to encumber too much the passage; but I am still of opinion, that the former, requiring the dust to be swept up and carried away before the shops are open, is very practicable in the summer, when the days are long; for, in walking through the Strand and Fleet street, one morning at seven o'clock, I observed there was not one shop open, though it had been daylight, and the sun up above three hours; the inhabitants of London choosing, voluntarily, to live much by candle light, and sleep by sunshine; and yet often complain, a little absurdly, of the duty on candles, and the high price of tallow.

Some may think these trifling matters not worth minding or relating; but, when they consider, that, though dust blown into the eyes of a single person, or into a single shop, in a windy day, is but of small importance, yet the great number of the instances in a populous city, and its frequent repetition, gives it weight and consequence, perhaps they will not censure, very severely, those who bestow some attention to affairs of this seemingly low nature. Human felicity is produced, not so much by great pieces of good fortune that seldom happen, as by little advantages that occur every day. Thus, if you teach a

poor young man to shave himself, and keep his razor in order, you may contribute more to the happiness of his life than in giving him a thousand guineas. This sum may be soon spent, the regret only remaining of having foolishly consumed it; but, in the other case, he escapes the frequent vexation of waiting for barbers, and of their sometimes dirty fingers, offensive breaths, and dull razors; he shaves when most convenient to him, and enjoys, daily, the pleasure of its being done with a good instrument. With these sentiments I have hazarded the few preceding pages, hoping they may afford hints, which, some time or other, may be useful to a city I love, having lived many years in it very happily, and, perhaps, to some of our towns in America.

Having been some time employed by the postmaster general of America, as his comptroller in regulating several offices, and bringing the officers to account, I was, upon his death, in 1753, appointed, jointly with Mr. William Hunter, to succeed him, by a commission from the postmaster general in England. The American office had, hitherto, never paid any thing to that of Britain. We were to have six hundred pounds a year between us, if we could make that sum out of the profits of the office. To do this, a variety of improvements was necessary; some of these were inevitably, at first, expensive; so that, in the first four years, the office became above nine hundred pounds in debt to us. But it soon after began to repay us; and, before I was displaced by a freak of the ministers, of which I shall speak hereafter, we had brought it to yield *three times* as much clear revenue to the crown as the post office of Ireland. Since that imprudent transaction, they have received from it—not one farthing!

The business of the post office occasioned my taking a journey, this year, to New England, where the College of Cambridge, of their own motion, presented me with the degree of Master of Arts. Yale

College, in Connecticut, had before made me a similar compliment. Thus, without studying in any college, I came to partake of their honors. They were conferred in consideration of my improvements and discoveries in the electric branch of natural philosophy.

CHAPTER X.

In 1754, war with France being again apprehended, a congress of commissioners from the different colonies, was, by an order of the lords of trade, to be assembled at Albany; there to confer with the chiefs of the Six Nations, concerning the means of defending both their country and ours. Governor Hamilton, having received this order, acquainted the House with it, requesting they would furnish proper presents for the Indians, to be given on this occasion; and naming the Speaker (Mr. Norris) and myself, to join Mr. John Penn and Mr. Secretary Peters, as commissioners to act for Pennsylvania. The House approved the nomination, and provided the goods for the presents, though they did not much like treating out of the province; and we met the other commissioners at Albany about the middle of June.

In our way thither, I projected and drew up a plan for the Union of all the colonies under one government, so far as might be necessary for defense, and other important general purposes. As we passed through New York, I had there shown my project to Mr. James Alexander and Mr. Kennedy, two gentlemen of great knowledge in public affairs; and, being fortified by their approbation, I ventured to lay it

before the congress. It then appeared, that several of the commissioners had formed plans of the same kind. A previous question was first taken, whether a union should be established, which passed in the affirmative unanimously. A committee was then appointed, one member from each colony, to consider the several plans and report. Mine happened to be preferred, and, with a few amendments, was accordingly reported.

By this plan the general government was to be administered by a President-general, appointed and supported by the crown; and a grand council was to be chosen by the representatives of the people of the several colonies, met in their respective assemblies. The debates upon it in congress went on daily, hand in hand with the Indian business. Many objections and difficulties were started; but at length they were all overcome, and the plan was unanimously agreed to, and copies ordered to be transmitted to the Board of Trade and to the Assemblies of the several provinces. Its fate was singular; the Assemblies did not adopt it, as they all thought there was too much *prerogative* in it; and in England it was judged to have too much of the *democratic*. The Board of Trade did not approve it, nor recommend it for the the approbation of his Majesty; but another scheme was formed, supposed to answer the same purpose better, whereby the governors of the provinces, with some members of their respective councils, were to meet and order the raising of troops, building of forts, &c., and to draw on the treasury of Great Britain for the expense, which was afterwards to be refunded by an act of Parliament laying a tax on America. My plan, with my reasons in support of it, is to be found among my political papers that were printed.

Being the winter following in Boston, I had much conversation with Governor Shirley upon both the plans. Part of what passed between us on this occasion may also be seen among those papers. The different and contrary reasons of dislike to my plan

makes me suspect that it was really the true medium; and I am still of opinion, it would have been happy for both sides, if it had been adopted. The colonies so united would have been sufficiently strong to have defended themselves; there would then have been no need of troops from England; of course the subsequent pretext for taxing America, and the bloody contest it occasioned, would have been avoided. But such mistakes are not new; history is full of the errors of states and princes.

“Look round the habitable world, how few
Know their own good, or, knowing it, pursue!”

Those who govern, having much business on their hands, do not generally like to take the trouble of considering and carrying into execution new projects. The best public measures are therefore seldom adopted from previous wisdom, but forced by the occasion.

The Governor of Pennsylvania, in sending it down to the Assembly, expressed his approbation of the plan, “as appearing to him to be drawn up with great clearness and strength of judgment, and therefore recommended it as well worthy of their closest and most serious attention.” The House, however, by the management of a certain member, took it up when I happened to be absent, which I thought not very fair, and reprobated it without paying any attention to it at all, to my no small mortification.

In my journey to Boston this year, I met at New York with our new governor, Mr. Morris, just arrived there from England, with whom I had been before intimately acquainted. He brought a commission to supersede Mr. Hamilton, who, tired with the disputes his proprietary instructions subjected him to, had resigned. Mr. Morris asked me, if I thought he must expect as uncomfortable an administration. I said, “No; you may on the contrary have a very comfortable one, if you will only take care not to enter into any dispute with the Assembly.” “My dear friend,” said he pleasantly, “how can you advise my avoiding disputes? You know I love disputing, it is

one of my greatest pleasures; however, to show the regard I have for your counsel, I promise you I will, if possible, avoid them." He had some reason for loving to dispute, being eloquent, an acute sophister, and therefore generally successful in argumentative conversation. He had been brought up to it from a boy, his father, as I have heard, accustoming his children to dispute with one another for his diversion, while sitting at table after dinner; but I think the practice was not wise, for, in the course of my observation, those disputing, contradicting, and confuting people, are generally unfortunate in their affairs. They get victory sometimes, but they never get good will, which would be of more use to them. We parted, he going to Philadelphia, and I to Boston.

In returning, I met at New York with the votes of the Assembly of Pennsylvania, by which it appeared, that, notwithstanding his promise to me, he and the House were already in high contention; and it was a continual battle between them, as long as he retained the government. I had my share of it; for, as soon as I got back to my seat in the Assembly, I was put on every committee for answering his speeches and messages, and by the committees always desired to make the drafts. Our answers, as well as his messages, were often tart, and sometimes indecently abusive; and, as he knew I wrote for the Assembly, one might have imagined, that, when we met, we could hardly avoid cutting throats. But he was so good natured a man, that no personal difference between him and me was occasioned by the contest, and we often dined together.

One afternoon, in the height of this public quarrel, we met in the street. "Franklin," said he, "you must go home with me and spend the evening; I am to have some company that you will like;" and, taking me by the arm, led me to his house. In gay conversation over our wine, after supper, he told us jokingly, that he much admired the idea of Sancho Panza, who, when it was proposed to give him a

government, requested it might be a government of blacks; as then, if he could not agree with his people, he might sell them. One of his friends, who sat next to me, said, "Franklin, why do you continue to side with those damned Quakers? Had you not better sell them? The Proprietor would give you a good price." "The governor," said I, "has not yet *blacked* them enough." He indeed had labored hard to blacken the Assembly in all his messages, but they wiped off his coloring as fast as he laid it on, and placed it, in return, thick upon his own face; so that, finding he was likely to be *negrofed* himself, he, as well as Mr. Hamilton, grew tired of the contest, and quitted the government.

These public quarrels were all at bottom owing to the Proprietaries, our hereditary governors; who, when any expense was to be incurred for the defense of their province, with incredible meanness, instructed their deputies to pass no act for levying the necessary taxes, unless their vast estates were in the same act expressly exonerated; and they had even taken the bonds of these deputies to observe such instructions. The Assemblies for three years held out against this injustice, though constrained to bend at last. At length Captain Denny, who was Governor Morris' successor, ventured to disobey those instructions; how that was brought about, I shall show hereafter.

But I am got forward too fast with my story; there are still some transactions to be mentioned, that happened during the administration of Governor Morris.

War being in a manner commenced with France, the government of Massachusetts Bay projected an attack upon Crown Point, and sent Mr. Quincy to Pennsylvania, and Mr. Pownall, afterwards Governor Pownall, to New York, to solicit assistance. As I was in the Assembly, knew its temper, and was Mr. Quincy's countryman, he applied to me for my influence and assistance. I dictated his address to them, which was well received. They voted an aid of ten thousand pounds, to be laid out in provisions. But,

the governor refusing his assent to their bill, (which included this with other sums granted for the use of the crown,) unless a clause were inserted, exempting the proprietary estate from bearing any part of the tax that would be necessary; the Assembly, though very desirous of making their grant to New England effectual, were at a loss how to accomplish it. Mr. Quincy labored hard with the governor to obtain his assent, but he was obstinate.

I then suggested a method of doing the business without the governor, by orders on the trustees of the Loan Office, which, by law, the Assembly had the right of drawing. There was, indeed, little or no money at the time in the office, and, therefore, I proposed that the orders should be payable in a year, and to bear an interest of five per cent. With these orders I supposed the provisions might easily be purchased. The Assembly, with very little hesitation, adopted the proposal. The orders were immediately printed, and I was one of the committee directed to sign and dispose of them. The fund for paying them was the interest of all the paper currency then extant in the province upon loan, together with the revenue arising from the excise, which, being known to be more than sufficient, they obtained credit, and were not only taken in payment for the provisions, but many moneyed people, who had cash lying by them, vested it in those orders, which they found advantageous, as they bore interest while upon hand, and might, on any occasion, be used as money. So that they were eagerly all bought up, and in a few weeks none of them was to be seen. Thus this important affair was by my means completed. Mr. Quincy returned thanks to the Assembly in a handsome memorial, went home highly pleased with the success of his embassy, and ever after bore for me the most cordial and affectionate friendship.

The British government, not choosing to permit the union of the colonies, as proposed at Albany,

and to trust that union with their defense, lest they should thereby grow too military, and feel their own strength, suspicion and jealousies at this time being entertained of them, sent over General Braddock with two regiments of regular English troops for that purpose. He landed at Alexandria, in Virginia, and thence marched to Frederictown, in Maryland, where he halted for carriages. Our Assembly, apprehending, from some information, that he had received violent prejudices against them, as averse to the service, wished me to wait upon him, not as from them, but as postmaster general, under the guise of proposing to settle with him the mode of conducting with most celerity and certainty, the dispatches between him and the governors of the several provinces, with whom he must necessarily have continual correspondence; and of which they proposed to pay the expense. My son accompanied me on this journey.

We found the General at Frederictown, waiting impatiently for the return of those he had sent through the back parts of Maryland and Virginia to collect wagons. I stayed with him several days, dined with him daily, and had full opportunities of removing his prejudices, by the information of what the Assembly had, before his arrival, actually done, and were still willing to do, to facilitate his operations. When I was about to depart, the returns of wagons to be obtained were brought in, by which it appeared, that they amounted only to twenty-five, and not all of those were in serviceable condition. The General and all the officers were surprised, declared the expedition was then at an end, being impossible; and exclaimed against the ministers for ignorantly sending them into a country destitute of the means of conveying their stores, baggage, &c., not less than one hundred and fifty waggons being necessary.

I happened to say, I thought it was a pity they had not been landed in Pennsylvania, as in that country almost every farmer had his wagon. The General

eagerly laid hold of my words, and said, "Then you, Sir, who are a man of interest there, can probably procure them for us; and I beg you will undertake it." I asked what terms were to be offered the owners of the wagons; and I was desired to put on paper the terms that appeared to me necessary. This I did, and they were agreed to, and a commission and instructions accordingly prepared immediately. What those terms were will appear in the advertisement I published as soon as I arrived at Lancaster; which being, from the great and sudden effect it produced, a piece of some curiosity, I shall insert it at length as follows.

"ADVERTISEMENT.

"LANCASTER, April 20th, 1755.

"Whereas, one hundred and fifty wagons, with four horses to each wagon, and fifteen hundred saddle or pack horses, are wanted for the service of his Majesty's forces, now about to rendezvous at Will's Creek; and his Excellency General Braddock having been pleased to empower me to contract for the hire of the same; I hereby give notice, that I shall attend for that purpose at Lancaster from this day to next Wednesday evening; and at York from next Thursday morning, till Friday evening; where I shall be ready to agree for wagons and teams, or single horses, on the following terms; viz: 1. That there shall be paid for each wagon, with four good horses and a driver, fifteen shillings *per diem*; and for each able horse with a pack saddle, or other saddle and furniture, two shillings *per diem*; and for each able horse without a saddle, eighteen pence *per diem*. 2. That the pay commence from the time of their joining the forces at Will's Creek, which must be on or before the 20th of May ensuing, and that a reasonable allowance be paid over and above for the time necessary for their traveling to Will's Creek and home again after their discharge. 3. Each wagon and team, and every saddle or pack horse is to be valued by indifferent

persons chosen between me and the owner; and, in case of the loss of any wagon, team, or other horse in the service, the price according to such valuation is to be allowed and paid. 4. Seven days' pay is to be advanced and paid in hand by me to the owner of each wagon and team, or horse, at the time of contracting, if required; and the remainder to be paid by General Braddock, or by the paymaster of the army, at the time of their discharge; or from time to time, as it shall be demanded. 5. No drivers of wagons, or persons taking care of the hired horses, are on any account to be called upon to do the duty of soldiers, or be otherwise employed than in conducting or taking care of their carriages or horses. 6. All oats, Indian corn, or other forage that wagons or horses bring to the camp, more than is necessary for the subsistence of the horses, is to be taken for the use of the army, and a reasonable price paid for the same.

“Note. — My son, William Franklin, is empowered to enter into like contracts with any person in Cumberland county.
B. FRANKLIN.”

“To the Inhabitants of the Counties of Lancaster, York, and Cumberland.”

“Friends and Countrymen,

“Being occasionally at the camp, at Frederic, a few days since, I found the general and officers extremely exasperated on account of their not being supplied with horses and carriages, which had been expected from this province, as most able to furnish them; but, through the dissensions between our Governor and Assembly, money had not been provided, nor any steps taken for that purpose.

“It was proposed to send an armed force immediately into these counties, to seize as many of the best carriages and horses as should be wanted, and compel as many persons into the service as would be necessary to drive and take care of them.

“I apprehended, that the progress of British soldiers through these counties on such an occasion, especially considering the temper they are in, and their resentment against us, would be attended with many and great inconveniences to the inhabitants, and therefore, more willingly, took the trouble of trying first what might be done by fair and equitable means. The people of these back counties have lately complained to the Assembly, that a sufficient currency was wanting; you have an opportunity of receiving, and dividing among you, a very considerable sum; for, if the service of this expedition should continue, as it is more than probable it will, for one hundred and twenty days, the hire of these wagons and horses will amount to upwards of thirty thousand pounds; which will be paid you in silver and gold, of the king’s money.

“The service will be light and easy, for the army will scarce march above twelve miles per day, and the wagons, and baggage horses, as they carry those things that are absolutely necessary to the welfare of the army, must march with the army, and no faster; and are, for the army’s sake, always placed where they can be most secure, whether in a march or in a camp.

“If you are really, as I believe you are, good and loyal subjects to his majesty, you may now do a most acceptable service, and make it easy to yourselves; for three or four of such as cannot separately spare from the business of their plantations, a wagon and four horses and a driver, may do it together; one furnishing the wagon, another one or two horses, and another the driver, and divide the pay proportionably between you. But if you do not this service to your king and country voluntarily, when such good pay and reasonable terms are offered to you, your loyalty will be strongly suspected. The king’s business must be done; so many brave troops, come so far for your defense, must not stand idle through your backwardness to do what may be reasonably

expected from you; wagons and horses must be had; violent measures will probably be used; and you will be left to seek for a recompense where you can find it, and your case, perhaps, be little pitied or regarded.

“I have no particular interest in this affair, as, except the satisfaction of endeavoring to do good, I shall have only my labor for my pains. If this method of obtaining the wagons and horses is not likely to succeed, I am obliged to send word to the general in fourteen days; and I suppose Sir John St. Clair, the hussar, with a body of soldiers, will immediately enter the province for the purpose; which I shall be sorry to hear, because I am very sincerely and truly, your friend and well-wisher,

“B. FRANKLIN.”

I received of the general about eight hundred pounds, to be disbursed in advance money to the wagon owners; but, that sum being insufficient, I advanced upwards of two hundred pounds more; and in two weeks the one hundred and fifty wagons, with two hundred and fifty-nine carrying horses were on their march for the camp. The advertisement promised payment according to the valuation, in case any wagons or horses should be lost. The owners, however, alleging they did not know General Braddock, or what dependence might be had on his promise, insisted on my bond for the performance; which I accordingly gave them.

While I was at the camp, supping one evening, with the officers of Colonel Dunbar's regiment, he represented to me his concern for the subalterns, who, he said, were generally not in affluence, and could ill afford, in this dear country, to lay in the stores that might be necessary in so long a march through a wilderness, where nothing was to be purchased. I commiserated their case, and resolved to endeavor procuring them some relief. I said nothing, however, to him, of my intention, but

wrote the next morning to the committee of the Assembly, who had the disposition of some public money, warmly recommending the case of these officers to their consideration, and proposing that a present should be sent them of necessaries and refreshments. My son, who had some experience of a camp life, and of its wants, drew up a list for me, which I enclosed in my letter. The committee approved, and used such diligence, that, conducted by my son, the stores arrived at the camp as soon as the wagons. They consisted of twenty parcels, each containing

6 lbs. loaf sugar.	1 Gloucester cheese.
6 do. Muscovado do.	1 keg containing 20 lbs. good butter.
1 do. green tea.	2 dozen old Madeira wine.
1 do. bohea do.	2 gallons Jamaica spirits.
6 do. ground coffee.	1 bottle flour of mustard.
6 do. chocolate.	2 well-cured hams.
$\frac{1}{2}$ chest best white biscuit.	$\frac{1}{2}$ dozen dried tongues.
$\frac{1}{2}$ lb. pepper.	6 lbs. rice.
1 quart white vinegar.	6 lbs. raisins.

These parcels, well packed, were placed on as many horses, each parcel, with the horse, being intended as a present for one officer. They were very thankfully received, and the kindness acknowledged by letters to me, from the colonels of both regiments, in the most grateful terms. The general, too, was highly satisfied with my conduct in procuring him the wagons, and readily paid my account of disbursements; thanking me repeatedly, and requesting my further assistance in sending provisions after him. I undertook this, also, and was busily employed in it till we heard of his defeat; advancing for the service, of my own money, upwards of one thousand pounds sterling; of which I sent him an account. It came to his hands, luckily for me, a few days before the battle, and he returned me immediately an order on the paymaster for the round sum of one thousand pounds, leaving the remainder to the next account. I consider this

payment as good luck, having never been able to obtain that remainder; of which more hereafter.

This general was, I think, a brave man, and might probably have made a figure as a good officer in some European war. But he had too much self-confidence, too high an opinion of the validity of regular troops, and too mean a one of both Americans and Indians. George Croghan, our Indian interpreter, joined him on his march with one hundred of those people, who might have been of great use to his army as guides and scouts, if he had treated them kindly; but he slighted and neglected them, and they gradually left him.

In conversation with him one day, he was giving me some account of his intended progress. "After taking Fort Duquesne," said he, "I am to proceed to Niagara; and, having taken that, to Frontenac, if the season will allow time, and I suppose it will; for Duquesne can hardly detain me above three or four days; and then I see nothing that can obstruct my march to Niagara." Having before revolved in my mind the long line his army must make in their march by a very narrow road, to be cut for them through the woods and bushes, and also what I had read of a former defeat of fifteen hundred French, who invaded the Illinois country, I had conceived some doubts and some fears for the event of the campaign. But I ventured only to say, "To be sure, Sir, if you arrive well before Duquesne, with these fine troops, so well provided with artillery, the fort, though completely fortified, and assisted by a very strong garrison, can probably make but a short resistance. The only danger I apprehend of obstruction to your march, is from the ambuscades of the Indians, who, by constant practice, are dexterous in laying and executing them; and the slender line, near four miles long, which your army must make, may expose it to be attacked, by surprise, in its flanks, and to be cut, like a thread, into several pieces, which, from

their distance, cannot come up in time to support each other."

He smiled at my ignorance, and replied, "These savages may indeed be a formidable enemy to your raw American militia; but, upon the king's regular and disciplined troops, sir, it is impossible they should make any impression." I was conscious of an impropriety in my disputing with a military man in matters of his profession, and said no more. The enemy, however, did not take the advantage of his army, which, I apprehended, its long line of march exposed it to, but let it advance, without interruption, till within nine miles of the place; and then, when more in a body, (for it had just passed a river, where the front had halted till all were come over,) and in a more open part of the woods than any it had passed, attacked its advanced guard by a heavy fire from behind trees and bushes; which was the first intelligence the general had of an enemy's being near him. This guard being disordered, the general hurried the troops up to their assistance, which was done, in great confusion, through wagons, baggage, and cattle, and presently the fire came upon their flank; the officers, being on horseback, were more easily distinguished, picked out as marks, and fell very fast; and the soldiers were crowded together in a huddle, having or hearing no orders, and standing to be shot at till two thirds of them were killed; and then, being seized with a panic, the remainder fled with precipitation.

The wagoners took each a horse out of his team and scampered; their example was immediately followed by others; so that all the wagons, provisions, artillery, and stores were left to the enemy. The general, being wounded, was brought off with difficulty; his secretary, Mr. Shirley, was killed by his side, and out of eighty-six officers sixty-three were killed or wounded; and seven hundred and fourteen men killed of eleven hundred. These eleven hundred had been picked men from the whole army; the rest

had been left behind with Colonel Dunbar, who was to follow with the heavier part of the stores, provisions, and baggage. The flyers, not being pursued, arrived at Dunbar's camp, and the panic they brought with them instantly seized him and all his people. And, though he had now above one thousand men, and the enemy who had beaten Braddock did not at most exceed four hundred Indians and French together, instead of proceeding, and endeavoring to recover some of the lost honor, he ordered all the stores, ammunition, &c., to be destroyed, that he might have more horses to assist his flight towards the settlements, and less lumber to remove. He was there met with requests from the governors of Virginia, Maryland, and Pennsylvania, that he would post his troops on the frontiers, so as to afford some protection to the inhabitants; but he continued his hasty march through all the country, not thinking himself safe till he arrived at Philadelphia, where the inhabitants could protect him. This whole transaction gave us Americans the first suspicion, that our exalted ideas of the prowess of British regular troops had not been well founded.

In their first march, too, from their landing till they got beyond the settlements, they had plundered and stripped the inhabitants, totally ruining some poor families, besides, insulting, abusing, and confining the people, if they remonstrated. This was enough to put us out of conceit of such defenders, if we had really wanted any. How different was the conduct of our French friends in 1781, who, during a march through the most inhabited part of our country, from Rhode Island to Virginia, near seven hundred miles, occasioned not the smallest complaint for the loss of a pig, a chicken, or even an apple.

Captain Orme, who was one of the General's aids-de-camp, and, being grievously wounded, was brought off with him, and continued with him to his death, which happened in a few days, told me, that he was totally silent all the first day, and at night only said,

“Who would have thought it?” That he was silent again the following day, saying only at last, “We shall better know how to deal with them another time;” and died in a few minutes after.

The secretary's papers, with all the general's orders, instructions, and correspondence, falling into the enemy's hands, they selected and translated into French a number of the articles, which they printed, to prove the hostile intentions of the British court, before the declaration of war. Among these I saw some letters of the general to the ministry, speaking highly of the great service I had rendered the army, and recommending me to their notice. David Hume, who was some years after secretary to Lord Hertford, when minister in France, and afterwards to General Conway, when secretary of state, told me, he had seen among the papers in that office, letters from Braddock, highly recommending me. But, the expedition having been unfortunate, my service, it seems, was not thought of much value, for those recommendations were never of any use to me.

As to rewards from himself, I asked only one, which was, that he would give orders to his officers not to enlist any more of our bought servants, and that he would discharge such as had been already enlisted. This he readily granted, and several were accordingly returned to their masters on my application. Dunbar, when the command devolved on him, was not so generous. He being at Philadelphia, on his retreat, or rather flight, I applied to him for the discharge of the servants of three poor farmers of Lancaster county, that he had enlisted, reminding him of the late general's orders on that head. He promised me, that if the masters would come to him at Trenton, where he should be in a few days on his march to New York, he would there deliver their men to them. They accordingly were at the expense and trouble of going

to Trenton, and there he refused to perform his promise, to their great loss and disappointment.

As soon as the loss of the wagons and horses was generally known, all the owners came upon me for the valuation, which I had given bond to pay. Their demands gave me a great deal of trouble. I acquainted them that the money was ready in the paymaster's hands, but the order for paying it must first be obtained from General Shirley, and that I had applied for it; but, he being at a distance, an answer could not soon be received, and they must have patience. All this, however, was not sufficient to satisfy them, and some began to sue me. General Shirley at length relieved me from this terrible situation, by appointing commissioners to examine the claims, and ordering payment. They amounted to near twenty thousand pounds, which to pay would have ruined me.

Before we had the news of this defeat, the two doctors Bond came to me with a subscription paper for raising money to defray the expense of a grand firework, which it was intended to exhibit at a rejoicing on receiving the news of our taking Fort Duquesne. I looked grave, and said, it would, I thought, be time enough to prepare the rejoicing when we knew we should have occasion to rejoice. They seemed surprised that I did not immediately comply with their proposal. "Why the d—l!" said one of them, "you surely don't suppose that the fort will not be taken?" "I don't know that it will not be taken; but I know that the events of war are subject to great uncertainty." I gave them the reasons of my doubting; the subscription was dropped, and the projectors thereby missed the mortification they would have undergone, if the firework had been prepared. Dr. Bond, on some other occasion, afterwards said he did not like Franklin's forebodings.

CHAPTER XI.

GOVERNOR MORRIS, who had continually worried the Assembly with message after message, before the defeat of Braddock, to beat them into the making of acts to raise money for the defense of the province, without taxing, among others, the proprietary estates, and had rejected all their bills for not having such an exempting clause, now redoubled his attacks with more hope of success, the danger and necessity being greater. The Assembly, however, continued firm, believing they had justice on their side, and that it would be giving up an essential right, if they suffered the governor to amend their money bills. In one of the last, indeed, which was for granting fifty thousand pounds, his proposed amendment was only of a single word. The bill expressed, "that all estates, real and personal, were to be taxed; those of the proprietaries *not* excepted." His amendment was; for *not*, read *only*. A small, but very material alteration. However, when the news of the disaster reached England, our friends there, whom we had taken care to furnish with all the Assembly's answers to the governor's messages, raised a clamor against the proprietaries for their meanness and injustice in giving their governor such instructions; some going so far as to say, that, by obstructing the defense of their province, they forfeited their right to it. They were intimidated by this; and sent orders to their receiver general to add five thousand pounds of their money to whatever sum might be given by the Assembly for such purpose.

This, being testified to the House, was accepted in lieu of their share of a general tax, and a new bill was formed, with an exempting clause, which passed accordingly. By this act I was appointed one of the commissioners for disposing of the money, sixty thousand pounds. I had been active in modeling the bill, and procuring its passage; and had, at the same time, drawn one for establishing and disciplining a voluntary militia; which I carried through the House without much difficulty, as care was taken in it to leave the Quakers at liberty. To promote the association necessary to form the militia, I wrote a dialogue, stating and answering all the objections I could think of to such a militia; which was printed, and had, as I thought, great effect.

While the several companies in the city and country were forming, and learning their exercise, the governor prevailed with me to take charge of our north-western frontier, which was infested by the enemy, and provide for the defense of the inhabitants, by raising troops, and building a line of forts. I undertook this military business, though I did not conceive myself well qualified for it. He gave me a commission, with full powers, and a parcel of blank commissions for officers, to be given to whom I thought fit. I had but little difficulty in raising men, having soon five hundred and sixty under my command. My son, who had, in the preceding war, been an officer in the army raised against Canada, was my aid-de-camp, and of great use to me. The Indians had burned Gnadenhutzen, a village settled by the Moravians, and massacred the inhabitants; but the place was thought a good situation for one of the forts.

In order to march thither, I assembled the companies at Bethlehem, the chief establishment of these people. I was surprised to find it in so good a posture of defense; the destruction of Gnadenhutzen had made them apprehend danger. The principal buildings were defended by a stockade; they had

purchased a quantity of arms and ammunition from New York, and had even placed quantities of small paving stones between the windows of their high stone houses, for their women to throw down upon the heads of any Indians, that should attempt to force into them. The armed brethren, too, kept watch, and relieved each other on guard, as methodically as in any garrison town. In conversation with the bishop, Spangenberg, I mentioned my surprise; for, knowing they had obtained an act of parliament, exempting them from military duties in the colonies, I had supposed they were conscientiously scrupulous of bearing arms. He answered me, that it was not one of their established principles; but that, at the time of their obtaining that act, it was thought to be a principle with many of their people. On this occasion, however, they, to their surprise, found it adopted by but a few. It seems they were either deceived in themselves, or deceived the parliament; but common sense, aided by present danger, will, sometimes, be too strong for whimsical opinions.

It was the beginning of January when we set out upon this business of building forts. I sent one detachment towards the Minisink, with instructions to erect one for the security of that upper part of the country; and another to the lower part, with similar instructions; and I concluded to go myself, with the rest of my force, to Gnadenhutten, where a fort was thought more immediately necessary. The Moravians procured me five wagons, for our tools, stores, and baggage.

Just before we left Bethlehem, eleven farmers, who had been driven from their plantations by the Indians, came to me requesting a supply of firearms, that they might go back and bring off their cattle. I gave them each a gun with suitable ammunition. We had not marched many miles, before it began to rain, and it continued raining all day; there were no habitations on the road to shelter us, till we arrived near night at the house of a German, where, and in his

barn, we were all huddled together as wet as water could make us. It was well we were not attacked, in our march, for our arms were of the most ordinary sort, and our men could not keep the locks of their guns dry. The Indians are dexterous in contrivances for that purpose, which we had not. They met that day the eleven poor farmers above mentioned, and killed ten of them. The one that escaped informed us, that his and his companions' guns would not go off, the priming being wet with the rain.

The next day being fair, we continued our march, and arrived at the desolated Gnadenhutten. There was a mill near, round which were left several pine boards, with which we soon huddled ourselves; an operation the more necessary at that inclement season, as we had no tents. Our first work was to bury more effectually the dead we found there, who had been half interred by the country people.

The next morning our fort was planned and marked out, the circumference measuring four hundred and fifty-five feet, which would require as many palisades to be made, one with another, of a foot diameter each. Our axes, of which we had seventy, were immediately set to work to cut down trees; and, our men being dexterous in the use of them, great dispatch was made. Seeing the trees fall so fast, I had the curiosity to look at my watch when two men began to cut at a pine; in six minutes they had it upon the ground, and I found it of fourteen inches diameter. Each pine made three palisades of eighteen feet long, pointed at one end. While these were preparing, our other men dug a trench all round, of three feet deep, in which the palisades were to be planted; and, the bodies being taken off our wagons, and the fore and hind wheels separated by taking out the pin which united the two parts of the perch, we had ten carriages, with two horses each, to bring the palisades from the woods to the spot. When they were set up, our carpenters built a platform of boards all round within, about six feet high, for the men to stand on when to fire through

the loopholes. We had one swivel gun, which we mounted on one of the angles, and fired it as soon as fixed, to let the Indians know, if any were within hearing, that we had such pieces; and thus our fort, if that name may be given to so miserable a stockade, was finished in a week, though it rained so hard every other day, that the men could not work.

This gave me occasion to observe, that, when men are employed, they are best contented; for on the days they worked they were good natured and cheerful, and, with the consciousness of having done a good day's work, they spent the evening jollily; but on our idle days they were mutinous and quarrelsome, finding fault with the pork, the bread, &c., and were continually in bad humor; which put me in mind of a sea captain, whose rule it was to keep his men constantly at work; and, when his mate once told him that they had done every thing, and there was nothing further to employ them about: "O," said he, "make them scour the anchor."

This kind of fort, however contemptible, is a sufficient defense against Indians, who have no cannon. Finding ourselves now posted securely, and having a place to retreat to on occasion, we ventured out in parties to scour the adjacent country. We met with no Indians, but we found the places on the neighboring hills, where they had lain to watch our proceedings. There was an art in their contrivance of those places, that seems worth mentioning. It being winter, a fire was necessary for them; but a common fire on the surface of the ground would by its light have discovered their position at a distance. They had therefore dug holes in the ground, about three feet diameter, and somewhat deeper; we found where they had, with their hatchets, cut off the charcoal from the sides of burnt logs lying in the woods. With these coals they had made small fires in the bottom of the holes, and we observed among the weeds and grass the prints of their bodies, made by their lying all round, with their legs hanging down

to keep their feet warm; which with them is an essential point. This kind of fire, so managed, could not discover them either by its light, flame, sparks, or even smoke; it appeared that the number was not great, and it seems they saw we were too many to be attacked by them with prospect of advantage.

We had for our chaplain, a zealous Presbyterian minister, Mr. Beatty, who complained to me, that the men did not generally attend his prayers and exhortations. When they enlisted they were promised, besides pay and provisions, a gill of rum a day, which was punctually served out to them, half in the morning, and the other half in the evening; and I observed they were punctual in attending to receive it: upon which I said to Mr. Beatty, "It is, perhaps, below the dignity of your profession to act as steward of the rum; but if you were only to distribute it out after prayers, you would have them all about you." He liked the thought, undertook the task, and, with the help of a few hands to measure out the liquor, executed it to satisfaction; and never were prayers more generally and more punctually attended. So that I think this method preferable to the punishment inflicted by some military laws for non-attendance on divine service.

I had hardly finished this business, and got my fort well stored with provisions, when I received a letter from the governor, acquainting me, that he had called the Assembly, and wished my attendance there, if the posture of affairs on the frontiers was such that my remaining there was no longer necessary. My friends, too, of the Assembly, pressing me by their letters to be, if possible, at the meeting; and, my three intended forts being now completed, and the inhabitants contented to remain on their farms, under that protection, I resolved to return; the more willingly, as a New England officer, Colonel Clapham, experienced in Indian war being on a visit to our establishment, consented to accept the

command. I gave him a commission, and, parading the garrison, had it read before them; and introduced him to them as an officer, who, from his skill in military affairs, was much more fit to command them than myself; and, giving them a little exhortation, took my leave. I was escorted as far as Bethlehem, where I rested a few days to recover from the fatigue I had undergone. The first night, lying in a good bed, I could hardly sleep, it was so different from my hard lodging on the floor of a hut at Gnadenhutzen, with only a blanket or two.

While at Bethlehem, I inquired a little into the practices of the Moravians; some of them had accompanied me, and all were very kind to me. I found they worked for a common stock, ate at common tables, and slept in common dormitories, great numbers together. In the dormitories I observed loopholes, at certain distances all along just under the ceiling, which I thought judiciously placed for change of air. I went to their church, where I was entertained with good music, the organ being accompanied with violins, hautboys, flutes, clarinets, &c. I understood their sermons were not usually preached to mixed congregations of men, women, and children, as is our common practice; but that they assembled sometimes the married men, at other times their wives, then the young men, the young women and the little children; each division by itself. The sermon I heard was to the latter, who came in and were placed in rows on benches; the boys under the conduct of a young man, their tutor, and the girls conducted by a young woman. The discourse seemed well adapted to their capacities, and was delivered in a pleasing, familiar manner, coaxing them as it were, to be good. They behaved very orderly, but looked pale and unhealthy; which made me suspect they were kept too much within doors, or not allowed sufficient exercise.

I inquired concerning the Moravian marriages, whether the report was true, that they were by lot. I

was told, that lots were used only in particular cases ; that generally, when a young man found himself disposed to marry, he informed the elders of his class, who consulted the elder ladies, that governed the young women. As these elders of the different sexes were well acquainted with the tempers and dispositions of their respective pupils, they could best judge what matches were suitable, and their judgments were generally acquiesced in. But if, for example, it should happen, that two or three young women were found to be equally proper for the young man, the lot was then recurred to. I objected, if the matches are not made by the mutual choice of the parties, some of them may chance to be very unhappy. " And so they may," answered my informer, " if you let the parties choose for themselves." Which indeed I could not deny.

Being returned to Philadelphia, I found the Association went on with great success. The inhabitants that were not Quakers, having pretty generally come into it, formed themselves into companies, and chose their captains, lieutenants, and ensigns, according to the new law. Dr. Bond visited me, and gave me an account of the pains he had taken to spread a general good liking to the law, and ascribed much to those endeavors. I had the vanity to ascribe all to my *Dialogue* ; however, not knowing but that he might be in the right, I let him enjoy his opinion ; which I take to be generally the best way in such cases. The officers, meeting, chose me to be colonel of the regiment, which I this time accepted. I forget how many companies we had, but we paraded about twelve hundred well looking men, with a company of artillery, who had been furnished with six brass field-pieces, which they had become so expert in the use of, as to fire twelve times in a minute. The first time I reviewed my regiment, they accompanied me to my house, and would salute me with some rounds fired before my door, which shook down and broke several glasses of my electrical apparatus. And my new

honor proved not much less brittle; for all our commissions were soon after broken, by a repeal of the law in England.

During this short time of my colonelship, being about to set out on a journey to Virginia, the officers of my regiment took it into their heads, that it would be proper for them to escort me out of town, as far as the Lower Ferry. Just as I was getting on horseback, they came to my door, between thirty and forty, mounted, and all in their uniforms. I had not been previously acquainted with their project, or I should have prevented it, being naturally averse to the assuming of state on any occasion; and I was a good deal chagrined at their appearance, as I could not avoid their accompanying me. What made it worse, was, that, as soon as we began to move, they drew their swords, and rode with them naked all the way. Somebody wrote an account of this to the Proprietor, and it gave him great offense. No such honor had been paid to him when in the province; nor to any of his governors; and, he said, it was only proper to princes of the blood royal; which may be true for aught I know, who was, and still am, ignorant of the etiquette in such cases.

This silly affair, however, greatly increased his rancor against me, which was before considerable, on account of my conduct in the Assembly respecting the exemption of his estate from taxation, which I had always opposed very warmly, and not without severe reflections on the meanness and injustice of contending for it. He accused me to the ministry, as being the great obstacle to the king's service, preventing, by my influence in the House, the proper form of the bills for raising money; and he intersticed the parade with my officers, as a proof of my having an intention to take the government of the province out of his hands by force. He also applied to Sir Everard Fawkener, the postmaster general, to deprive me of my office. But it had no

other effect than to produce from Sir Everard a gentle admonition.

Notwithstanding the continued wrangle between the governor and the House, in which I was a member, had so large a share, there still subsisted a civil intercourse between that gentleman and myself, and we never had any personal difference. I have sometimes since thought, that his little or no resentment against me, for the answers it was known I drew up to his messages, might be the effect of professional habit, and that, being bred a lawyer, he might consider us both as merely advocates for contending clients in a suit; he for the Proprietaries, and I for the Assembly. He would therefore sometimes call in a friendly way, to advise with me on difficult points; and sometimes, though not often, take my advice.

We acted in concert to supply Braddock's army with provisions, and, when the shocking news arrived of his defeat, the governor sent in haste for me to consult with him on measures for preventing the desertion of the back counties. I forget now the advice I gave; but I think it was, that Dunbar should be written to, and prevailed with, if possible, to post his troops on the frontiers for their protection, until, by reinforcements from the colonies, he might be able to proceed in the expedition. And, after my return from the frontier, he would have me undertake the conduct of such an expedition with provincial troops, for the reduction of Fort Duquesne, Dunbar and his men being otherwise employed; and he proposed to commission me as general. I had not so good an opinion of my military abilities as he professed to have, and I believe his professions must have exceeded his real sentiments; but probably he might think, that my popularity would facilitate the business with the men, and influence in the Assembly the grant of money to pay for it; and that, perhaps, without taxing the Proprietary. Finding me not so forward to engage as he expected, the project was

dropped; and he soon after left the government, being superseded by Captain Denny.

Before I proceed in relating the part I had in public affairs under this new governor's administration, it may not be amiss to give here some account of the rise and progress of my philosophical reputation.

In 1746, being in Boston, I met there with a Dr. Spence, who was lately arrived from Scotland, and showed me some electric experiments. They were imperfectly performed, as he was not very expert; but, being on a subject quite new to me, they equally surprised and pleased me. Soon after my return to Philadelphia, our library company received from Mr. Peter Collinson, Fellow of the Royal Society of London, a present of a glass tube, with some account of the use of it in making such experiments. I eagerly seized the opportunity of repeating what I had seen at Boston; and, by much practice, acquired great readiness in performing those also, which we had an account of from England, adding a number of new ones. I say much practice, for my house was continually full, for some time, with persons who came to see these new wonders.

To divide a little this incumbrance among my friends, I caused a number of similar tubes to be blown in our glass house, with which they furnished themselves, so that we had at length, several performers. Among these, the principal was Mr. Kinnersley, an ingenious neighbor, who being out of business, I encouraged him to undertake showing the experiments for money, and drew up for him two lectures, in which the experiments were ranged in such order, and accompanied with explanations in such method, as that the foregoing should assist in comprehending the following. He procured an elegant apparatus for the purpose, in which all the little machines that I had roughly made for myself, were neatly formed by instrument makers. His lectures were well attended, and gave great satisfaction; and after some time he went through the colonies, exhibiting them in every

capital town, and picked up some money. In the West India Islands, indeed, it was with difficulty the experiments could be made, from the general moisture of the air.

Obliged as we were to Mr. Collinson for the present of the tube, &c., I thought it right he should be informed of our success in using it, and wrote him several letters containing accounts of our experiments. He got them read in the Royal Society, where they were not, at first, thought worth so much notice as to be printed in their *Transactions*. One paper, which I wrote for Mr. Kinnersley, on the sameness of lightning with electricity, I sent to Mr. Mitchel, an acquaintance of mine, and one of the members also of that society; who wrote me word, that it had been read, but was laughed at by the connoisseurs. The papers, however, being shown to Dr. Fothergill, he thought them of too much value to be stifled, and advised the printing of them. Mr. Collinson then gave them to Cave, for publication in his *Gentleman's Magazine*; but he chose to print them separately in a pamphlet, and Dr. Fothergill wrote the preface. Cave, it seems, judged rightly for his profession, for, by the additions that arrived afterwards, they swelled to a quarto volume; which has had five editions, and cost him nothing for copy money.

It was, however, some time before those papers were much taken notice of in England. A copy of them happening to fall into the hands of the Count de Buffon, a philosopher deservedly of great reputation in France, and, indeed, all over Europe, he prevailed with M. Dubourg to translate them into French; and they were printed at Paris. The publication offended the Abbé Nollet, preceptor in natural philosophy to the royal family, and an able experimenter, who had formed and published a theory of electricity, which then had the general vogue. He could not, at first, believe that such a work came from America, and said it must have

been fabricated by his enemies at Paris, to oppose his system. Afterwards, having been assured, that there really existed such a person as Franklin at Philadelphia, which he had doubted, he wrote and published a volume of letters, chiefly addressed to me, defending his theory, and denying the verity of my experiments, and of the positions deduced from them.

I once purposed answering the Abbé, and actually began the answer; but, on consideration that my writings contained a description of experiments, which any one might repeat and verify, and, if not to be verified, could not be defended; or of observations offered as *conjectures*, and not delivered dogmatically, therefore, not laying me under any obligation to defend them; and reflecting, that a dispute between two persons, written in different languages, might be lengthened greatly by mistranslations, and thence, misconceptions of one another's meaning, much of one of the Abbé's letters being founded on an error in the translation, I concluded to let my papers shift for themselves; believing it was better to spend what time I could spare from public business in making new experiments, than in disputing about those already made. I, therefore, never answered M. Nollet; and the event gave me no cause to repent my silence; for my friend, M. Le Roy, of the Royal Academy of Sciences, took up my cause and refuted him; my book was translated into the Italian, German, and Latin languages; and the doctrine it contained was, by degrees, generally adopted by the philosophers of Europe, in preference to that of the Abbé; so that he lived to see himself the last of his sect, except Monsieur B——, of Paris, his *élève* and immediate disciple.

What gave my book the more sudden and general celebrity, was the success of one of its proposed experiments, made by Messrs. Dalibard and De Lor at Marly, for drawing lightning from the clouds.

This engaged the public attention everywhere. M. De Lor, who had an apparatus for experimental philosophy, and lectured in that branch of science, undertook to repeat what he called the *Philadelphia Experiments*; and, after they were performed before the king and court, all the curious of Paris flocked to see them. I will not swell this narrative with an account of that capital experiment, nor of the infinite pleasure I received in the success of a similar one I made, soon after, with a kite, at Philadelphia, as both are to be found in the histories of electricity.

Dr. Wright, an English physician, when at Paris, wrote to a friend, who was of the Royal Society, an account of the high esteem my experiments were in, among the learned abroad, and of their wonder, that my writings had been so little noticed in England. The Society, on this, resumed the consideration of the letters that had been read to them; and the celebrated Dr. Watson drew up a summary account of them, and of all I had afterwards sent to England on the subject; which he accompanied with some praise of the writer. This summary was then printed in their *Transactions*; and, some members of the Society in London, particularly the very ingenious Mr. Canton, having verified the experiment of procuring lightning from the clouds by a pointed rod, and acquainted them with the success, they soon made me more than amends for the slight with which they had before treated me. Without my having made any application for that honor, they chose me a member; and voted, that I should be excused the customary payments, which would have amounted to twenty-five guineas; and ever since have given me their *Transactions* gratis. They also presented me with the gold medal of Sir Godfrey Copley, for the year 1753, the delivery of which was accompanied by a very handsome speech of the president, Lord Macclesfield, wherei: I was highly honored.

CHAPTER XII.

OUR new governor, Captain Denny, brought over for me the before mentioned medal from the Royal Society, which he presented to me at an entertainment given him by the city. He accompanied it with very polite expressions of his esteem for me, having, as he said, been long acquainted with my character. After dinner, when the company, as was customary at that time, were engaged in drinking, he took me aside into another room, and acquainted me, that he had been advised by his friends in England to cultivate a friendship with me, as one who was capable of giving him the best advice, and of contributing most effectually to the making his administration easy. That he therefore desired of all things to have a good understanding with me, and he begged me to be assured of his readiness on all occasions to render me every service that might be in his power. He said much to me also of the proprietor's good disposition towards the province, and of the advantage it would be to us all, and to me in particular, if the opposition that had been so long continued to his measures was dropped, and harmony restored between him and the people; in effecting which, it was thought no one could be more serviceable than myself; and I might depend on adequate acknowledgments and recompenses. The drinkers, finding we did not return immediately to the table, sent us a decanter of madeira, which the governor made a liberal use of, and in proportion became more profuse of his solicitations and promises.

My answers were to this purpose; that my circumstances thanks to God, were such as to make proprietary favors unnecessary to me; and that, being a member of the Assembly, I could not possibly accept of any; that, however, I had no personal enmity to the proprietary, and that, whenever the public measures he proposed should appear to be for the good of the people, no one would espouse and forward them more zealously than myself; my past opposition having been founded on this, that the measures which had been urged were evidently intended to serve the proprietary interest, with great prejudice to that of the people. That I was much obliged to him (the governor) for his profession of regard to me, and that he might rely on every thing in my power to render his administration as easy to him as possible, hoping at the same time that he had not brought with him the same unfortunate instructions his predecessors had been hampered with.

On this he did not then explain himself; but, when he afterwards came to do business with the Assembly, they appeared again, the disputes were renewed, and I was as active as ever in the opposition, being the penman, first of the request to have a communication of the instructions, and then of the remarks upon them, which may be found in the votes of the times, and in the *Historical Review* I afterwards published. But between us personally no enmity arose; we were often together; he was a man of letters, had seen much of the world, and was entertaining and pleasing in conversation. He gave me information, that my old friend Ralph was still alive; that he was esteemed one of the best political writers in England; had been employed in the dispute between Prince Frederic and the King, and had obtained a pension of three hundred pounds a year; that his reputation was indeed small as a poet, Pope having damned his poetry in the *Dunciad*; but his prose was thought as good as any man's.

The Assembly finally finding the proprietary ob-

stinately persisted in shackling the deputies with instructions inconsistent not only with the privileges of the people, but with the service of the crown, resolved to petition the king against them, and appointed me their agent to go over to England, to present and support the petition. The House had sent up a bill to the governor, granting a sum of sixty thousand pounds for the king's use, (ten thousand pounds of which was subjected to the orders of the then general, Lord Loudoun,) which the governor, in compliance with his instructions, absolutely refused to pass.

I had agreed with Captain Morris, of the packet at New York, for my passage, and my stores were put on board; when Lord Loudoun arrived at Philadelphia, expressly, as he told me, to endeavor an accommodation between the governor and Assembly, that his majesty's service might not be obstructed by their dissensions. Accordingly he desired the governor and myself to meet him, that he might hear what was to be said on both sides. We met and discussed the business. In behalf of the Assembly, I urged the various arguments, that may be found in the public papers of that time, which were of my writing, and are printed with the minutes of the Assembly; and the governor pleaded his instructions, the bond he had given to observe them, and his ruin if he disobeyed; yet seemed not unwilling to hazard himself, if Lord Loudoun would advise it. This his Lordship did not choose to do, though I once thought I had nearly prevailed with him to do it; but finally he rather chose to urge the compliance of the Assembly; and he entreated me to use my endeavors with them for that purpose, declaring that he would spare none of the king's troops for the defense of our frontiers, and that, if we did not continue to provide for that defense ourselves, they must remain exposed to the enemy.

I acquainted the House with what had passed, and, presenting them with a set of resolutions I had

drawn up, declaring our rights, that we did not relinquish our claim to those rights, but only suspended the exercise of them on this occasion, through *force*, against which we protested, they at length agreed to drop that bill, and frame another conformable to the proprietary instructions. This, of course, the governor passed, and I was then at liberty to proceed on my voyage. But in the mean time the packet had sailed with my sea stores, which was some loss to me, and my only recompense was his Lordship's thanks for my service; all the credit of obtaining the accommodation falling to his share.

He set out for New York before me; and, as the time for dispatching the packet boats was at his disposition, and there were two then remaining there, one of which, he said, was to sail very soon, I requested to know the precise time, that I might not miss her by any delay of mine. The answer was: "I have given out that she is to sail on Saturday next; but I may let you know, *entre nous*, that if you are there by Monday morning, you will be in time, but do not delay longer." By some accidental hindrance at a ferry, it was Monday noon before I arrived, and I was much afraid she might have sailed, as the wind was fair; but I was soon made easy by the information, that she was still in the harbor, and would not move till the next day. One would imagine, that I was now on the very point of departing for Europe. I thought so; but I was not then so well acquainted with his Lordship's character, of which *indescision* was one of the strongest features. I shall give some instances. It was about the beginning of April, that I came to New York, and I think it was near the end of June before we sailed. There were then two of the packet boats, which had been long in readiness, but were detained for the general's letters, which were always to be ready *to-morrow*. Another packet arrived; she too was detained; and before we sailed, a fourth was expected. Ours was the first to be dispatched, as having been there

longest. Passengers were engaged for all, and some extremely impatient to be gone, and the merchants uneasy about their letters, and for the orders they had given for insurance, (it being war time,) and for autumnal goods; but their anxiety availed nothing; his Lordship's letters were not ready; and yet whoever waited on him found him always at his desk, pen in hand, and concluded he must needs write abundantly.

Going myself one morning to pay my respects, I found in his antechamber one Innis, a messenger of Philadelphia, who had come thence express, with a packet from Governor Denny, for the general. He delivered to me some letters from my friends there, which occasioned my inquiring when he was to return, and where he lodged, that I might send some letters by him. He told me, he was ordered to call to-morrow at nine for the general's answer to the governor, and should set off immediately. I put my letters into his hands the same day. A fortnight after, I met him again in the same place. "So, you are soon returned, Innis?" "Returned! no, I am not gone yet." "How so?" "I have called here this, and every morning these two weeks past, for his Lordship's letters, and they are not yet ready." "Is it possible, when he is so great a writer; for I see him constantly at his escritoir?" "Yes," said Innis, "but he is like St. George, on the signs, *always on horseback, and never rides on.*" This observation of the messenger was, it seems, well founded; for, when in England, I understood that Mr. Pitt, afterwards Lord Chatham, gave it as one reason for removing this general, and sending Generals Amherst and Wolfe, *that the minister never heard from him, and could not know what he was doing.*

In this daily expectation of sailing, and all the three packets going down to Sandy Hook, to join the fleet there, the passengers thought it best to be on board, lest, by a sudden order, the ships should sail, and they be left behind. There, if I remember,

we were about six weeks, consuming our sea stores, and obliged to procure more. At length the fleet sailed, the general and all his army on board, bound to Louisburg, with intent to besiege and take that fortress; and all the packet boats in company were ordered to attend the general's ship ready to receive his dispatches when they should be ready. We were out five days before we got a letter with leave to part; and then our ship quitted the fleet and steered for England. The other two packets he still detained, carried them with him to Halifax, where he stayed some time to exercise the men in sham attacks upon sham forts, then altered his mind as to besieging Louisburg, and returned to New York, with ail his troops, together with the two packets above mentioned, and all their passengers! During his absence, the French and savages had taken Fort George, on the frontier of that province, and the Indians had massacred many of the garrison after capitulation.

I saw, afterwards, in London, Captain Bound, who commanded one of those packets. He told me, that, when he had been detained a month, he acquainted his lordship, that his ship was grown foul, to a degree that must necessarily hinder her fast sailing, a point of consequence for a packet boat, and requested an allowance of time to heave her down, and clean her bottom. His lordship asked how long time that would require. He answered, three days. The general replied, "If you can do it in one day, I give leave; otherwise, not; for you must certainly sail the day after to-morrow." So he never obtained leave, though detained afterwards, from day to day, during full three months.

I saw, also in London, one of Bonell's passengers, who was so enraged against his lordship for deceiving and detaining him so long at New York, and then carrying him to Halifax and back again, that he swore he would sue him for damages. Whether he did or not,

I never heard; but, as he represented it, the injury to his affairs was very considerable.

On the whole, I wondered much how such a man came to be intrusted with so important a business as the conduct of a great army; but, having since seen more of the great world, and the means of obtaining, and motives for giving, places and employments, my wonder is diminished. General Shirley, on whom the command of the army devolved, upon the death of Braddock, would, in my opinion, if continued in place, have made a much better campaign than that of Loudoun, in 1756, which was frivolous, expensive, and disgraceful to our nation beyond conception. For, though Shirley was not bred a soldier, he was sensible and sagacious in himself, and attentive to good advice from others, capable of forming judicious plans, and quick and active in carrying them into execution. Loudon, instead of defending the colonies with his great army, left them totally exposed, while he paraded idly at Halifax, by which means Fort George was lost; besides, he deranged all our mercantile operations, and distressed our trade, by a long embargo on the exportation of provisions, on pretense of keeping supplies from being obtained by the enemy, but, in reality, for beating down their price in favor of the contractors, in whose profits, it was said, perhaps from suspicion only, he had a share; and when, at length, the embargo was taken off, neglecting to send notice of it to Charleston, where the Carolina fleet was detained near three months; and whereby their bottoms were so much damaged by the worm, that a great part of them foundered in their passage home.

Shirley was, I believe, sincerely glad of being relieved from so burdensome a charge, as the conduct of an army must be to a man unacquainted with military business. I was at the entertainment given by the city of New York to Lord Loudoun, on his taking upon him the command. Shirley, though thereby superseded, was present also. There was a great

company of officers, citizens, and strangers, and, some chairs having been borrowed in the neighborhood, there was one among them very low, which fell to the lot of Mr. Shirley. I sat by him, and perceiving it, I said, "They have given you a very low seat." "No matter, Mr. Franklin," said he, "I find a *low seat* the easiest."

While I was, as before mentioned, detained at New York, I received all the accounts of the provisions, &c., that I had furnished to Braddock; some of which accounts could not sooner be obtained from the different persons I had employed to assist in the business. I presented them to Lord Loudoun, desiring to be paid the balance. He caused them to be examined by the proper officer, who, after comparing every article with its voucher, certified them to be right; and his lordship promised to give me an order on the paymaster for the balance due to me. This was, however, put off from time to time; and, though I called often for it by appointment, I did not get it. At length, just before my departure, he told me he had, on better consideration, concluded not to mix his accounts with those of his predecessors. "And you," said he, "when in England, have only to exhibit your accounts to the treasury, and you will be paid immediately."

I mentioned, but without effect, a great and unexpected expense I had been put to by being detained so long at New York, as a reason for my desiring to be presently paid; and, on my observing, that it was not right I should be put to any further trouble or delay in obtaining the money I had advanced, as I charged no commission for my service, "O," said he, "you must not think of persuading us, that you are no gainer; we understand better those matters, and know, that every one concerned in supplying the army finds means, in the doing it, to fill his own pockets." I assured him, that was not my case, and that I had not pocketed a farthing; but he appeared clearly not to believe me; and indeed I afterwards

learned, that immense fortunes are often made in such employments. As to my balance, I am not paid it to this day; of which more hereafter.

Our captain of the packet boasted much, before we sailed, of the swiftness of his ship; unfortunately when we came to sea, she proved the dullest of ninety-six sail, to his no small mortification. After many conjectures respecting the cause, when we were near another ship almost as dull as ours, which, however, gained upon us, the captain ordered all hands to come aft, and stand as near the ensign staff as possible. We were, passengers included, about forty persons. While we stood there, the ship mended her pace, and soon left her neighbor far behind, which proved clearly what our captain suspected, that she was loaded too much by the head. The casks of water, it seems, had been all placed forward; these he therefore ordered to be moved further aft, on which the ship recovered her character, and proved the best sailer in the fleet.

The captain said, she had gone at the rate of thirteen knots, which is accounted thirteen miles per hour. We had on board, as a passenger, Captain Archibald Kennedy, of the Royal Navy, who contended that it was impossible, and that no ship ever sailed so fast, and that there must have been some error in the division of the log line, or some mistake in heaving the log. A wager ensued between the two captains, to be decided when there should be sufficient wind. Kennedy therefore examined the log line, and being satisfied with it, he determined to throw the log himself. Some days after, when the wind was very fair and fresh, and the captain of the packet, Lutwidge, said he believed she then went at the rate of thirteen knots, Kennedy made the experiment, and owned his wager lost.

The foregoing fact I give for the sake of the following observation. It has been remarked, as an imperfection in the art of ship building, that it can never be known, till she is tried, whether a new

ship will, or will not, be a good sailer; for that the model of a good sailing ship has been exactly followed in a new one, which has been proved, on the contrary, remarkably dull. I apprehend, that this may partly be occasioned by the different opinions of seamen respecting the modes of loading, rigging, and sailing of a ship; each has his method; and the same vessel, laden by the method and orders of one captain, shall sail worse than when by the orders of another. Besides, it scarce ever happens, that a ship is formed, fitted for the sea, and sailed by the same person. One man builds the hull, another rigs her, a third loads and sails her. No one of these has the advantage of knowing all the ideas and experience of the others, and, therefore, can not draw just conclusions from a combination of the whole.

Even in the simple operation of sailing when at sea, I have often observed different judgments in the officers who commanded the successive watches, the wind being the same. One would have the sails trimmed sharper or flatter than another, so that they seemed to have no certain rule to govern by. Yet, I think, a set of experiments might be instituted, first, to determine the most proper form of the hull for swift sailing; next, the best dimensions and most proper place for the masts; then, the form and quantity of sails, and their position, as the winds may be; and, lastly, the disposition of the lading. This is an age of experiments, and I think a set accurately made and combined, would be of great use.

We were several times chased in our passage, but outsailed every thing; and in thirty days had soundings. We had a good observation, and the captain judged himself so near our port, Falmouth, that, if we made a good run in the night, we might be off the mouth of that harbor in the morning; and, by running in the night, might escape the notice of the enemy's privateers, who often cruised near the entrance of the Channel. Accordingly, all the sail was set that we could possibly carry, and the wind being

very fresh and fair, we stood right before it, and made great way. The captain, after his observation, shaped his course, as he thought, so as to pass wide of the Scilly Rocks; but it seems there is sometimes a strong current setting up St. George's Channel, which formerly caused the loss of Sir Cloudesley Shovel's squadron, in 1707. This was probably, also, the cause of what happened to us.

We had a watchman placed in the bow, to whom they often called, "*Look well out before there;*" and he as often answered, "*Ay, ay;*" but perhaps had his eyes shut, and was half asleep, at the time; they sometimes answering, as is said, mechanically; for he did not see a light just before us, which had been hid by the studding sails from the man at the helm, and from the rest of the watch, but by an accidental yaw of the ship, was discovered, and occasioned a great alarm, we being very near it; the light appearing to me as large as a cart wheel. It was midnight, and our captain fast asleep; but Captain Kennedy, jumping upon deck, and seeing the danger, ordered the ship to wear round, all sails standing; an operation dangerous to the masts, but it carried us clear, and we avoided shipwreck, for we were running fast on the rocks on which the light was erected. This deliverance impressed me strongly with the utility of lighthouses, and made me resolve to encourage the building some of them in America, if I should live to return thither.

In the morning it was found by the soundings, that we were near our port, but a thick fog hid the land from our sight. About nine o'clock the fog began to rise, and seemed to be lifted up from the water like the curtain of a theatre, discovering underneath the town of Falmouth, the vessels in the harbor, and the fields that surround it. This was a pleasing spectacle to those who had been long without any other prospect than the uniform view of a vacant ocean, and it gave us the more pleasure, as we were now free from the anxieties which had arisen.

I set out immediately, with my son, for London, and we only stopped a little by the way to view Stonehenge, on Salisbury Plain, and Lord Pembroke's house and gardens, with the very curious antiquities at Wilton. We arrived in London, the 27th of July, 1757.

CHAPTER XIII.

THUS far, Franklin has told his own narrative, but here, unfortunately, the record closes, and we are left to other sources to fill out the history of his remarkable career. His autobiography has been called one of the most charming performances of the kind ever written; and it is to be regretted that he did not continue it till a later period in his life. The ease and simplicity with which he tells his story, captivate the attention, while the sound common sense and practical benevolence indicated, so unostentatiously, all through the recital, win the mind and heart of the reader. We will take up the narrative where he leaves it, and continue the record of his life till its close.

He was now in his fifty-second year. Thirty years before, he had landed in England, poor and unknown, the victim of false promises and hollow-hearted professions. Now, he came, not rich indeed, but possessed of that, in comparison with which wealth is valueless; no longer unknown, but enjoying a reputation wider than any of his countrymen could yet boast; and, instead of being friendless, meeting everywhere with a reception of real cordiality from those who had never seen his face before. He was, indeed, hardly prepared for the expression of feeling

which greeted him upon his arrival. His fame, both as a philosopher and political writer, had preceded him, and he found himself welcomed, at once by scientific men and diplomatists. Wherever he went, he was received with attention. The opposition, which had been at first made to his scientific discoveries, gradually gave way before his convincing experiments and reasonings, and the rewards of literary merit were abundantly conferred upon him. As before related, he had been elected a fellow of the Royal Society of London, and now other learned societies of Europe were equally ambitious of conferring the same honor upon themselves, by enrolling his name upon their own lists of members. The university of St. Andrew's, in Scotland, gave him the degree of doctor of laws, and this example was followed by the universities of Edinburgh and Oxford. The municipality of Edinburgh gave him the freedom of the city. His correspondence was sought for by the most eminent philosophers of Europe. He could easily and pleasantly have filled up his time with scientific pursuits, but, as this was not the purpose for which he had been sent there, he assiduously turned his chief attention to fulfill the main object of his mission.

He found the difficulty, to settle which he had been appointed, a serious one. The proprietaries of the Pennsylvania province were now Richard and Thomas Penn, who seemed disposed to adhere, in the closest degree, to all the rights which the charter granted to their father conferred. The point which they claimed most earnestly, and which the provincial assembly was least willing to allow, was the immunity of their own estates from taxation. This had been a long contested difficulty. Franklin early waited upon the proprietaries to induce them to waive their claims. The subject was the occasion of many interviews between them, but the Penns remained inflexible. Franklin's clear mind could easily make them see the reasonableness of the proposed

measure, but their interest was too much at stake, and as they still had the power, they refused to submit. Finding these intractable, Franklin next laid the matter before the great officers of the crown, but here he found that all the means and influence which the proprietaries could command, were leagued against him. The prejudices of the ministry were all in opposition to his suit, and the king was naturally disposed to look with jealousy upon a movement which might interfere with the royal prerogative, and which certainly aimed at greater liberty and privilege for the people. In addition to this, a prejudice was quite generally entertained against the Pennsylvanians for various reasons, all of which circumstances combined, gave the negotiation slow progress.

But Franklin was not a man to be disheartened. He worked all the more earnestly by reason of these obstacles. He wrote and published various papers, tending to set the matter in its true light, some of which greatly chagrined his opponents. They attempted to answer, but he was ready to reply; and, with the strong points all in his favor, he had little difficulty in rebutting their arguments. The matter was carried to the privy council, but success here was no easy matter. Their deliberations were usually prolonged almost interminably, and their decisions, when given, did not always bear the seal of justice. In a letter to his wife, January 21st, 1758, Franklin says: "I begin to think I shall hardly be able to return before this time twelve months. I am for doing effectually what I came about, and I find it requires both time and patience. You may think, perhaps, that I can find many amusements here to pass the time agreeably. It is true, the regard and friendship I meet with from persons of worth, and the conversation of ingenious men, give me no small pleasure; but, at this time of life, domestic comforts afford the most solid satisfaction, and my uneasiness at being absent from my family, and longing desire

to be with them, make me often sigh in the midst of cheerful company."

Franklin's apprehensions that his business would detain him in England for a twelvemonth after the date of this letter, were more than realized. New difficulties and unexpected delays constantly arose, till it seemed as if the disputes between the proprietaries and the province were to be prolonged interminably; but while the matter was under discussion in England, a circumstance occurred in Pennsylvania which finally brought about an adjustment of the contest. Governor Denny at last assented to a law, passed by the assembly, imposing a tax in which no discrimination was made in favor of the estates of the Penn family. They, alarmed at this intelligence, and at Franklin's efforts, exerted themselves to the utmost to prevent the royal sanction being given to this law, which they represented as highly iniquitous, designed to throw the burden of supporting the government upon them, and calculated to produce the most ruinous consequences to themselves and their posterity. The subject was amply discussed, but the proprietaries were at length compelled to yield. Franklin's good sense, by giving up several unessential points which the other party magnified to a great importance, permitted them to do it with as good a grace as possible. He agreed to see that the assessment of the tax should be so made that the proprietary estates should pay no more than a due proportion, and, receiving this engagement, the Penn family gradually withdrew their opposition and gave up to the province the long-contested point. The adjustment was not finally made till June, 1760.

Though the great object of Franklin's mission to London was now accomplished, he continued to remain there for a still longer period. The important advantages which England would derive from the possession of the Canadas, and the means which she should employ to bring them within her dominion, seem to have engaged his attention sooner than that

of any other individual. He perceived the folly of carrying on the war with France in the heart of Germany, and, as a loyal Briton, urged the importance of aiming a heavy blow at the French power in North America. His advice and representations carried great weight with the ministry. It has been said, and it is doubtless true, that the expedition against Canada, and its consequences in the victory of Wolfe at Quebec, and the conquest of that country, may be chiefly ascribed to Franklin. Afterwards, when the war with France was drawing to a close, the same mind perceived and urged the retention of the Canadas as a measure to be insisted upon by the British government in its treaty of peace. Shortly after the termination of his chief dispute with the proprietaries, he published his famous "Canada Pamphlet," in which, with his usual clearness and force, he laid before the public mind the advantages which England would receive by retaining Canada from the French. Especially was the importance of this measure urged on the ground that it would remove a dangerous enemy from the borders of the British colonies. "If," says the author, "the visionary danger of independence in our colonies is to be feared, nothing is more likely to render it substantial than the neighborhood of foreigners at enmity with the sovereign government, capable of giving either aid or an asylum, as the event shall require." The immediate result was as Franklin desired; and it cannot be doubted that his representations contributed greatly to shape the course of the ministry in the treaty by which Canada was secured to the British crown.

In the summer of 1761, Dr. Franklin visited the principal cities on the continent of Europe, and, in 1762, prepared to return to America. Several of his British friends urged him to send for his family and take up his residence in England, but to this he had weighty objections. His home was in America, and he loved it, as he afterwards abundantly proved, with a strength of affection which would not suffer him to

desert it. For a short time he remained, prosecuting some interesting philosophical researches, and then began to make preparations for bringing his long protracted absence from his country to a close. On the 17th of August, 1762, he thus writes from Portsmouth to Lord Kames, whose acquaintance and friendship he had had the happiness to gain during his sojourn:—"I am now waiting here only for a wind to waft me to America, but can not leave this happy island, and my friends in it, without extreme regret, though I am going to a country and a people that I love. I am going from the old world to the new; and I fancy I feel like those who are leaving this world for the next: grief at the parting; fear of the passage; hope of the future."

To this same nobleman, Franklin afterwards gave a narrative of the events of his life for two or three years immediately following this, which we here insert, as forming an apt continuation of his own autobiography.

"You require my history from the time I set sail for America. I left England about the end of August, 1762, in company with ten sail of merchant ships under convoy of a man of war. We had a pleasant passage to Madeira, where we were kindly received and entertained, our nation then being in high honor with the Portuguese, on account of the protection we were then affording them against the united invasion of France and Spain. It is a fertile island, and the different heights and situations among its mountains, afford such temperaments of air, that all the fruits of northern and southern countries are produced there: corn, grapes, apples, peaches, oranges, lemons, plantains, bananas, &c. Here we furnished ourselves with fresh provisions and refreshments of all kinds; and, after a few days, proceeded on our voyage, running southward until we got into the trade winds, and then with them westward, till we drew near the coast of America. The weather was so favorable that there were but

few days in which we could not visit from ship to ship, dining with each other, and on board the man of war, which made the time pass very agreeably, much more so than when one goes in a single ship; for this was like traveling in a moving village, with all one's neighbors about one.

“On the 1st of November, I arrived safe and well at my own home, after an absence of near six years; found my wife and daughter well, the latter grown quite a woman, with many amiable accomplishments acquired in my absence; and my friends as hearty and affectionate as ever, with whom my house was filled for many days, to congratulate me on my return. I had been chosen yearly, during my absence, to represent the city of Philadelphia in our provincial assembly, and, on my appearance in the house, they voted me three thousand pounds sterling for my services in England, and their thanks, delivered by the speaker. In February following, my son arrived with my new daughter; for, with my consent and approbation, he married, soon after I left England, a very agreeable West India lady, with whom he is very happy. I accompanied him to his government, where he met with the kindest reception from the people of all ranks, and has lived with them ever since in the greatest harmony.* A river only parts that province and ours, and his residence is within seventeen miles of me, so that we frequently see each other.

“In the spring of 1763, I set out on a tour through all the northern colonies, to inspect and regulate the post offices in the several provinces.† In this journey I spent the summer, traveled about sixteen hundred miles, and did not get home till the

* As a compliment to the father, just before he left England, William Franklin was appointed, by the ministry, governor of New Jersey.

† Franklin was still postmaster general.

beginning of November.* The assembly sitting through the following winter, and warm disputes arising between them and the governor, I became wholly engaged in public affairs; for, besides my duty as an assembly man, I had another trust to execute, that of being one of the commissioners appointed by law, to dispose of the public money appropriated to the raising and paying an army to act against the Indians and defend the frontiers. And then, in December, we had two insurrections of the back inhabitants of our province, by whom twenty poor Indians were murdered, that had, from the first settlement of the province, lived among us, under the protection of our government. This gave me a good deal of employment; for, as the rioters threatened further mischief, and their actions seemed to be approved by an ever acting party, I wrote a pamphlet, entitled 'A Narrative,'† &c., (which I think I sent to you,) to strengthen the hands of our weak government, by rendering the proceedings of the rioters unpopular and odious. This had a good effect; and afterwards, when a great body of them, with arms, marched toward the capital, in defiance of the government, with an avowed resolution to put to death one hundred and forty Indian converts, then under its protection, I formed an association, at the governor's request, for his and their defense, we having no militia. Near one thousand of the citizens accordingly took arms; Governor Penn‡ made my house, for some time, his head quarters, and did every thing by my advice, so that, for about eight and forty hours, I was a very great man, as

* In this journey he visited his relatives in Boston and Rhode Island, and was received with the warmest cordiality.

† "A Narrative of the Late Massacres in Lancaster county." This was not only an able exposure of the wickedness of these cold blooded murders, but an eloquent appeal to the sensibilities of the people who were suffering from the disgrace of these transactions.

‡ In October, 1763, John Penn arrived in Pennsylvania, having been appointed to succeed Governor Hamilton.

I had been once some years before, in a time of public danger.

“But the fighting face we put on, and the reasonings we used with the insurgents (for I went at the request of the governor and council, with three others to meet and discourse with them), having turned them back and restored quiet to the city, I became a less man than ever; for I had, by this transaction, made myself many enemies among the populace; and the governor (with whose family our public disputes had long placed me in an unfriendly light, and the services I had lately rendered not being of the kind that make a man acceptable), thinking it a favorable opportunity, joined the whole weight of the proprietary interest to get me out of the assembly, which was accordingly effected at the last election by a majority of about twenty-five in four thousand voters. The house, however, when they met in October, approved of the resolution taken, while I was speaker,* of petitioning the crown for a change of government, and requested me to return to England to prosecute that petition, which service I accordingly undertook, and embarked at the beginning of November last,† being accompanied to the ship, sixteen miles, by a cavalcade of three hundred of my friends, who filled our sails with their good wishes, and I arrived in thirty days at London.”

We are now to contemplate Franklin on a broader theatre of political action. The relations between the colonies and the mother country were fast rising to an importance which enlisted all his attention, and his clear mind soon became one of the moving spirits in guiding the train of events which led to the subsequent struggle and independence. The British government, guided by the blindest infatuation, was taking away

* Franklin was chosen Speaker of the Assembly in 1764. With his usual modesty, he makes no direct mention of this appointment in this letter.

† Franklin left Philadelphia to set out upon this his third visit to England November 7th, 1764.

privilege after privilege from its American subjects, utterly unconscious that the "green withs" with which it was binding the limbs of the young giant, were soon to be broken like "flax when it toucheth the fire." The stamp act had been threatened while Dr. Franklin was a member of the Pennsylvania assembly, but was not made an act of parliament till some time afterward. Soon after his arrival in London, his attention was called to the subject, and his earnest remonstrances were made to the ministry against the proposed measure. He represented to them the folly and the madness of the course, and assured them that if the king would take the usual method, and issue his letters, asking for supplies, money would willingly be given by the colonies, and this too, far exceeding in amount that which the stamp act was expected to raise. He told them that the colonies would throw themselves back upon the rights guaranteed by the British constitution, and claim exemption from taxation by parliament, a body in which they were allowed to have no representation. He wrote articles for the press against the measure, and ridiculed, with all his keen severity, the ideas which prevailed in England respecting America. The newspapers were full of their speculations and exaggerated reports, and he was indefatigable in his replies. "Every man in England," he writes to Lord Kames, "seems to consider himself as a piece of a sovereign over America; seems to jostle himself into the throne with the king, and talks of *our subjects in the colonies*." Franklin was not alone in his attempts to set these matters right; but all the efforts of himself and his coadjutors were fruitless so far as their main object was concerned. A wise Providence was permitting the British government to run its headlong course of folly unrestrained. The stamp act was passed on the 22d of March, 1765, notwithstanding the earnest remonstrances that were pressed by the colonies and their agents against it. "The tide," says Franklin, "was too strong against us. The nation was provoked by

American claims to independence, and all parties joined by resolving in this act to settle the point. We might as well have hindered the sun's setting."

It is well known how this act was received in the colonies. It was met everywhere with a burst of indignation. Every officer appointed by the crown to collect the taxes, found it impossible to execute his commission, and was forced to resign. The exhibitions of popular feeling, showed a degree of firmness and determination for which the ministry were not prepared. In the beginning of 1766, no stamps were left in the provinces, the hated paper having all been searched out and destroyed by the active resisters. The law was in fact a dead letter, and the ministry saw that it could never be enforced except at the point of the bayonet, a measure which they were not yet prepared to undertake. Mr. Grenville, the original author of the bill, was at this time succeeded in the ministry by the Marquis of Rockingham, and early in 1766, the subject was again brought before parliament. Petitions for the repeal of the odious act were poured in from the colonies, and the matter was warmly discussed by both friends and foes. During the discussion, Dr. Franklin underwent an examination before parliament respecting the state of affairs in America. He was questioned in the presence of a full house, by various individuals of both parties, and his answers were given without premeditation, and without knowing beforehand the nature or form of the question that was to be put. Yet the dignity of his bearing, says Mr. Sparks, his self-possession, the promptness and propriety with which he replied to each interrogatory, the profound knowledge he displayed upon every topic presented to him, his perfect acquaintance with the political condition and internal affairs of his country, the fearlessness with which he defended the late doings of his countrymen, and censured the measures of parliament, his pointed expressions and characteristic manner; all these combined to rivet the attention, and excite the

astonishment of his audience;—and, indeed, there is no event in this great man's life more creditable to his talents and character, or more honorable to his fame, than this examination before the British parliament. It is an enduring monument of his wisdom, firmness, sagacity, and patriotism.*

This examination carried great weight; and, after a stormy debate, the bill was at length repealed, though a "Declaratory Act" was passed by parliament, affirming their right to tax America. Franklin's labors had been so assiduous that his health now began to fail him, and, in order to recruit his overtaxed energies, he spent two months of the summer of 1766 in traveling on the continent of Europe. He visited Holland and Germany, and received the greatest marks of attention from the learned wherever he went. His fame was now spread over all the civilized world, and his wonderful discoveries were far better appreciated by men of science on the continent than in Great Britain. During this tour he was able to accumulate many facts from observation, which afterwards led to the discovery of some interesting principles in philosophy. His mind was always at work, but it seemed most readily to catch at any thing promising to be of practical benefit to the race.

The main business of Franklin in England, as agent for Pennsylvania, was to procure for that province a change in its form of government. But as this was looked upon by the ministry as too great a privilege to be granted to a colony; and as American affairs of more importance, as they deemed it, were constantly demanding their attention, the petition which Franklin was appointed to present, gained but little of their notice. Notwithstanding this, he earnestly pressed the subject before them, but their laxity gave him much time for other pursuits. In September, 1767, he visited Paris, and was received with great favor by the king and

* Life of Franklin, p. 299.

court, as well as by noted men of letters in France. Though he knew not what was before him for the future, yet his habits of close observation enabled him to acquire much information during this visit, which he afterwards found was of great advantage to him, when appointed minister plenipotentiary from the United States to the court of Versailles.

In 1768 he was hoping to be able to return to America. Nothing but the desire of accomplishing the object of his mission had detained him so long from his family, and the prospect for succeeding in this was now darker than ever. But, while making arrangements to leave, he received notice from the governor of Georgia, that he had been appointed agent for that province, which intelligence led him at once to sacrifice his personal feelings, and remain still longer in Great Britain. His correspondence with his family, at this period, testify how great was the sacrifice which he made of inclination to what he conceived to be his duty. His letters to Mrs. Franklin, during his whole sojourn away, are full of affection, and breathe a genial sympathy and tenderness, which show that his mind was far from being all engrossed in public life. Franklin was preëminently a man, both of the heart and the head.

Shortly after this he was appointed agent for New Jersey. His growing influence in America, and his active exertions in England, enlisted against him the jealousy of the ministry, who threatened to deprive him of the office which he still continued to hold, as postmaster general for the colonies. As he well knew they could find no pretense for this in his mal-administration of duty, he treated the threat with indifference, and it was not immediately executed. With great boldness and energy he continued to oppose the encroachments of parliament upon the rights of the colonies, unbiassed by either favor or frown. The amount of his labors is astonishing, and his efforts can not well be over-estimated, in their important bearing upon the

subsequent struggle. His extensive correspondence with the colonies kept him perfectly acquainted with the state of American affairs, and all the information he could derive was used, with that singular prudence which characterized him, for the benefit of those who had entrusted their interests to his hands. His growing cares prevented all thoughts of immediately returning to America, and, as he still continued in England, the Massachusetts' province, in October, 1770, appointed him to act as her agent, thus making four colonies whose welfare he was to maintain against the encroachments of parliament and the crown.

The great contest between America and England began in the differences between the provincial assemblies and parliament. The assemblies found their privileges melting away before the exactions of a body whose right to legislate for them, and especially to lay taxes, they pertinaciously refused to acknowledge. Their clamors had procured a repeal of the stamp act, but the right of parliament to bind the colonies, in all cases whatsoever, was still insisted upon. The assemblies would not recognize this right, but as they flattered themselves it would not be executed now that the stamp act was repealed, they were not very active at first in remonstrating against it. Had this pretended right been permitted to remain dormant, the colonies would cheerfully have furnished their quota of supplies, in the mode to which they had been accustomed; that is, by acts of their own assemblies, in consequence of requisitions from the secretary of state. If this practice had been pursued, such was the disposition of the colonies towards the mother country, that, notwithstanding the disadvantages under which they labored, from restraints upon their trade, calculated solely for the benefit of the commercial and manufacturing interests of Great Britain, a separation of the two countries might have been a far distant event. The Americans, from their earliest infancy, were taught to venerate

a people from whom they were descended; whose language, laws, and manners were the same as their own. They looked up to them as models of perfection; and, in their prejudiced minds, the most enlightened nations of Europe were considered as almost barbarians, in comparison with Englishmen. The name of an Englishmen conveyed to an American the idea of every thing good and great. Such sentiments instilled into them in early life, what, but a repetition of unjust treatment, could have induced the most distant thought of separation! The duties on glass, paper, leather, painters' colors, tea, &c.; the disfranchisement of some of the colonies; the obstruction to the measures of the legislature in others, by the king's governors; the contemptuous treatment of their humble remonstrances, stating their grievances, and praying a redress of them, and other violent and oppressive measures, at length excited an ardent spirit of opposition. Instead of endeavoring to allay this by a more lenient conduct, the ministry seemed resolutely bent upon reducing the colonies to the most slavish obedience to their decrees. But this only tended to aggravate. Vain were all the efforts made use of to prevail upon them to lay aside their designs, to convince them of the impossibility of carrying them into effect, and of the mischievous consequences which must ensue from a continuance of the attempt; they persevered with an inflexibility scarcely paralleled.

The advantages which Great Britain derived from her colonies were so great, that nothing but a degree of infatuation little short of madness, could have produced a continuance of measures calculated to keep up a spirit of uneasiness, which might occasion the slightest wish for a separation. When we consider the great improvements in the science of government, the general diffusion of the principles of liberty among the people of Europe, the effects which these have already produced in France, and the probable consequences which will result from them elsewhere, all of which are the offspring of the American Revolution,

it cannot but appear strange that events of so great moment to the happiness of mankind should have been ultimately occasioned by the wickedness or ignorance of a British ministry.

Dr. Franklin used every effort in his power to induce the ministry to take a different course, but all in vain. They would not listen to his voice. His clear mind saw, that if they did not change their plans, consequences which they were not dreaming of would soon burst upon them; but though he attempted to bring this matter out before their view, they he led it not. It was about this time that he seems first to have entertained the notion of American independence. Separation from the mother country was not at all contemplated by the colonies when they first began to urge their grievances; but Franklin saw that if their complaints continued unredressed, such separation must inevitably be sought for. Partly in expectation of results which he foresaw, he suggested to some of his American friends the idea of a continental congress. This important measure, which was afterwards carried out, seems to have originated with Franklin.

There were many in England who reprobated the course of the ministry, and defended the colonies. They consulted with Franklin to see if some means could not be devised by which a reconciliation could yet be effected. He readily gave them all the suggestions in his power, and even presented them with a basis of adjustment, on which alone, in his view, the existing difficulties could be settled. Still, he had but little hopes of success. He despaired of seeing the ministry change their policy, and he knew that, unless this were done, no reconciliation could take place. He labored as faithfully as was in his power, but was constantly rebuffed in all his attempts. The ministry insulted him; noble lords, in the house of peers, publicly defamed him; he was deprived of his place as post-master general; and various indignities were heaped upon him in requital

for his honorable and high-minded course. Such trifles as these did not move him from his duty; but finding, at length, that no alternative was left to the colonies but armed resistance or unqualified submission, he believed that he could better serve their interests in the inevitable struggle, by returning to America, than by remaining at his present post. He accordingly left England on the 21st of March, 1775, arriving in Philadelphia on the 5th of May.

A second congress was to assemble on the 10th of May, and, the day after his arrival, Franklin was chosen a representative in it by the assembly of Pennsylvania. Before this body was ready to meet, he was convinced, by his personal observation, that the opinion he had formed when in England, respecting a reconciliation, was perfectly just. The recent skirmishes at Lexington and Concord, where American blood had been spilled in resisting aggression, awakened a new life all through the colonies. The feelings which had been steadily growing for the few past years, were suddenly called forth to a lively exercise. At once there arose from every province a stern voice of resistance. The ties of interest and reciprocal feeling, which had bound the colonies to the mother country, were now broken. The hour had come for the dark and trying contest between weakness and right on the one side, and power and wrong on the other. There were many brave hearts who looked forward to the unequal conflict with apprehension and alarm, but the great majority were ready to meet it boldly. The enthusiasm of the moment neither shut out from the colonies the fearful odds against them, nor prevented them from seeing the gigantic interests at stake. Though all was dark, all was important. The issue was to be a nation's birth, or a nation's death.

When congress assembled, there were a few who had not yet given up all hopes of some satisfactory adjustment without a resort to violent measures. These proposed another petition to the crown but

although Franklin and the majority clearly saw that matters had gone too far for such a measure to result in any good, they yielded to the proposition, partly in the laudable spirit of promoting unity and harmony, and partly with the design of thus gaining time for the military and other preparations necessary for the war which, they perceived, must inevitably ensue. The petition was passed, and then congress faithfully began its work. Franklin became, as it were, a young man again, in the earnestness with which he labored. Never was the great energy of his character more fully displayed than at the present time. His toils were incessant. He was at the same time a member of congress and chairman of the committee of safety, appointed by the Pennsylvania assembly to attend to all matters connected with the defense of the province. This latter post was an exceedingly arduous, as well as a highly responsible and important trust. "My time," he says, "was never more fully employed. In the morning, at six, I am at the committee of safety, which holds till near nine, when I am in congress, and that sits till four in the afternoon. Both these bodies proceed with the greatest unanimity." At the same time his mind was busy upon a plan of confederation for the colonies, which he laid before congress on the 21st of July. It was not immediately acted upon, but its presentation prepared the way for the subsequently-formed federal Union. The post office affairs of the country being all disarranged by the present unsettled state of things, congress took the matter into its own hands, and gave again to Franklin the appointment of which the British ministry had deprived him. He was reappointed post-master general; and, with perfect confidence in his integrity and discretion, congress gave him control over the whole business of the department, allowing him to appoint deputies and establish post routes, as he should think proper. Franklin does not seem to have shrunk from any of the duties which were pressed

upon him. His early habits of industry, and methodical arrangement of his time, were now of great service to him. Had it not been for these, even his genius would have sunk under the overwhelming labors which were constantly engaging his attention.

In every matter of great importance transacted by congress during this period, we find his name prominent. The American army was to be organized anew, and placed upon a footing suitable for meeting its coming duties, and Franklin is sent with a committee to the camp at Cambridge to assist the newly-appointed commander-in-chief in this work. During his absence, he is elected to represent the city of Philadelphia in the Pennsylvania assembly; returning, he takes upon himself these additional duties, and finds himself also appointed by congress a member of a committee for secret correspondence with individuals in Europe upon a matter of vital importance between the colonies and the mother country. The design of this committee was to awaken and keep up an interest in the colonies among the friends of America in England, Ireland, and the continent of Europe; and, from Dr. Franklin's long residence and extensive acquaintance abroad, the chief part of the correspondence devolved upon him.

Soon after, another arduous duty was pressed upon him. Congress appointed him, with two others, a commissioner to Canada for the purpose of regulating the American army which had been sent there, and to assist the Canadians in setting up an independent government for themselves, and also to induce them to join the southern colonies in their resistance to England. This mission was unsuccessful; and, indeed, it does not appear that Franklin himself anticipated much benefit from it. The journey to Montreal was performed in the spring of 1776, and the excessive hardships which Franklin endured on the way, from bad weather and roads, were too much for his already overtaxed constitution. "I begin to apprehend," he writes from Saratoga, "that I have undertaken a fatigue that, at my time of life, may prove too much

for me; so I sit down to write to a few friends *by way of farewell.*" The journey was, however, accomplished; though, as we have said, productive of no very beneficial results, and Franklin returned to Philadelphia in June.

The fleets and armies, which Great Britain was now sending over to enforce obedience, were truly formidable; yet it was at this time, and in view of all the hazards of the contest, that the momentous question of INDEPENDENCE was brought forward. With an army,—numerous indeed, but ignorant of discipline, and entirely unskilled in the art of war, without money, without a fleet, without allies, and with nothing but the love of liberty to support them,—the colonists determined to separate from a country, from which they had experienced a repetition of injury and insult. In this question Dr. Franklin was decidedly in favor of the measure proposed, and was appointed by congress one of a committee of five to prepare a declaration asserting the independence of the United States. The declaration was written by Jefferson, and presented to congress from the committee as it came from his hands, with the exception of a few verbal alterations suggested by Franklin. On the 4th of July, this immortal article, after having been debated for three days, was passed by congress, signed by the members,* and promulgated as a formal utterance in the face of the world, that the United States had a right to be free.

Soon after this, a convention met, at Philadelphia, for the purpose of forming a new constitution for Pennsylvania. Franklin was chosen its president, a duty which he discharged with great fidelity, notwithstanding the heavy burdens which already taxed his energies. When Lord Howe arrived in America as a commissioner from Great Britain, Franklin, who had made his acquaintance in England, corresponded with

* All the members present on the 4th of July signed the Declaration, except John Dickinson, a delegate from Pennsylvania.

him respecting the nature of his mission; and, upon his lordship expressing a desire to confer with some of the members of congress, he was appointed, with two others, to go and see what propositions the English commissioner had to offer. The interview took place at Staten Island, Sept. 11th, but was productive of no definite result. Lord Howe made no proposals for peace, and the committee from congress returned and reported to that body, that, so far as they could learn, his powers extended only to the granting pardons to those who would submit.

Thus convinced that nothing remained to them but to go forward and meet the whole strength of the British arm, congress seriously turned its thoughts to a matter which it had before partially discussed. It was determined to make an effort to enter into some foreign alliance which would enable the United States more successfully to resist the British forces, and France was selected as the power most likely to be able and willing to render them the desired assistance. Congress accordingly appointed Franklin, Silas Deane, and Arthur Lee, commissioners "to transact the business of the United States at the court of France." Messrs. Deane and Lee were already in Europe, and Franklin, notwithstanding his age and consequent infirmities, immediately prepared to join them. He sailed from America, October 26th, 1776, and arrived in France early in December.

Perhaps no person could have been found more capable of rendering essential services to the United States, at the court of France, than Dr. Franklin. His wonderful discoveries in science had surrounded his name with a world-wide celebrity, but had gained him especial honors among the French. His philosophical papers had already been translated into many languages, and, in addition to these, the French possessed three separate translations of his *Poor Richard*, which, for its style of surpassing simplicity and precision, and its sagacious maxims relating to the springs of human action, they lauded as almost without

a parallel in any other writer. The history of his recent transactions in England, his bold and uncompromising defense of his country's rights, the success with which he had sustained his examination before parliament, and the abuse he had received from the ministers, were known everywhere, and had added to the fame of the philosopher and philanthropist, that of the statesman and patriot.* His arrival in France was unexpected, and the business of his mission at first unknown, but he was received with all the cordiality and enthusiasm which the French know better than any other nation how to display. A Frenchman† had first applied to him the sublime inscription—

“Eripuit cælo fulmen, sceptrumque tyrannis;”

and soon after he had reached Paris, portraits of him, with this motto attached, were multiplied on every hand. A variety of medallions were likewise made, on which his head was represented, of various sizes, suitable to be set in the lids of snuff-boxes, or to be worn in rings. Vast numbers of these were sold, as well as numerous copies of pictures, busts, and prints, in which the artists vied with each other to attain beauty of execution and accuracy of resemblance. His name was spoken with loud applause by almost every tongue. The attentions which were lavished upon him, were received with a becoming modesty, but, at the same time, with dignity. He exhibited no embarrassment amid the refinements of Parisian society, to which he was at once introduced; but, though he could act the part of a courtier with native ease, he never forgot, and never failed to manifest, that he was a republican. He showed himself perfectly acquainted with all the intrigues of diplomacy, and, in the negotiations upon which he entered, as soon as possible, he astonished the ministry by his perfect acquaintance with every detail, together with the comprehensive nature of his plans, and the energy and

* Sparks' Life of Franklin, p. 420.

† Turgot.

acumen with which he advocated them. Lacroix, a French historian of celebrity, thus speaks of him :

“By the effect which Franklin produced in France, one might say that he fulfilled his mission, not with a court, but with a free people. Diplomatic etiquette did not permit him often to hold interviews with the ministers, but he associated with all the distinguished personages, who directed public opinion. Men imagined they saw in him a sage of antiquity, come back to give austere lessons and generous examples to the moderns. They personified in him the republic, of which he was the representative and the legislator. They regarded his virtues as those of his countrymen, and even judged of their physiognomy by the imposing and serene traits of his own. Happy was he who could gain admittance to see him in the house which he occupied. This venerable old man, it was said, joined to the demeanor of Phocion the spirit of Socrates. Courtiers were struck with his native dignity, and discovered in him the profound statesman. Young officers, impatient to signalize themselves in another hemisphere, came to interrogate him respecting the military condition of the Americans ; and, when he spoke to them with deep concern and a manly frankness of the recent defeats, which had put his country in jeopardy, this only excited in them a more ardent desire to join and assist the republican soldiers.”

Notwithstanding his flattering reception, Franklin and his associate commissioners soon found, that they could make no rapid headway in the business before them. The French ministry were not yet prepared for the open rupture with England, which they knew must at once ensue upon their espousing the cause of her revolted colonies. They secretly wished success to the American cause, and longed to see their formidable rival despoiled of her transatlantic possessions ; but they took much time for deliberation before giving the commissioners any definite encouragement of aid. The news of the reverses of the campaign of 1776 added materially

to the delay. Exaggerated rumors were spread over France, that all was well nigh lost for the United States. The American army had retreated from Canada. The battle of Brooklyn had been fought, resulting in the total rout of the continental forces, and the evacuation of Long Island. New York had been given up to the British. General Howe was master of forts Washington and Lee. The heroic army was fast becoming disbanded—the militia throwing down their arms, and returning home in despair. General Washington, with the remnant who remained, ill clothed and scantily fed, was retreating, before the British, through a desponding country. Congress had fled from Philadelphia to Baltimore. It was reported, in France, that thousands were daily flocking to avail themselves of the pardon which Lord Howe had offered to the rebels who would return; and though Washington was still unyielding, yet, in the minds of many, the last reasonable hope of liberty for this country had well nigh expired.

Under these circumstances, it was hardly to be expected that France would put herself in jeopardy by an open declaration. But though the commissioners were excluded from court, and received no outward tokens of the royal favor, in secret they were assured, by the ministry, that the king was graciously disposed towards the object of their mission. But this was not all. They were so happy as to receive more substantial assurances of aid. They were informed, through a private channel, that they would receive two millions of livres, to be expended for the use of the United States, which, it was at first intimated to them, was a loan from generous individuals, who wished well to the Americans in their struggle for freedom, and that it was not expected to be repaid till after the peace. The money was in fact, however, drawn from the royal treasury, as the commissioners themselves perfectly understood. Thus assured of the real disposition of

the French court, and knowing the resolution with which the United States would, notwithstanding their present reverses, still continue to prosecute their cause, Franklin and his associates had little doubt but that, ultimately, they would be able to bring France over openly to their side.

In this they were not disappointed. The campaign of 1777 put a different aspect on the state of affairs in America. The capture of Burgoyne, and the good conduct of the troops under Washington, showed that the Americans were in earnest, and wanted neither physical strength nor firmness of purpose. The commissioners laid before the court the brightening condition of things in the United States, and were soon assured that this was what the king and ministry had waited for, and earnestly desired. They renewed their propositions for a treaty, and, after the necessary diplomatic interviews and delays, their object was gained. M. Gèrard, the secretary of the king's council, called upon them, and told them that his majesty, by the advice of his council, had determined to acknowledge the independence of the United States, and to enter into a treaty of amity and commerce with them; that it was the desire and intention of the king to form such a treaty as would be durable, which could be done only by establishing it on principles of exact reciprocity, so that its continuance should be for the interests of both parties; that no advantage would be taken of the present situation of the United States, to obtain terms which they would not willingly agree to under any other circumstances, and that it was his fixed determination to support their independence by all the means in his power. This would doubtless lead to a war with England; yet the king would not ask or expect any compensation for the expense and damage he might sustain on that account. The only condition required by him would be, that the United States should not give up their independence in any treaty of peace they might

make with England, nor return to their subjection to the British government.*

These generous terms were made the basis of a treaty, which was soon definitely agreed upon by the commissioners and French ministry. Various writers have condemned the policy of the king, for giving any countenance to a revolution whose indirect results were ultimately so disastrous to his own throne. Doubtless Louis, in this measure, was unconsciously digging a mine beneath his feet; but, whatever may be said of the wisdom of his course, the United States will always have reason to be grateful for his aid. It is but just to add, that all through the war which she now took upon herself in our defense, France showed not the least disposition to disregard any of the obligations under which she became voluntarily bound.

The treaties of amity and alliance were signed at Paris, on the 6th of February, 1778, and a special messenger was at once dispatched with them to America, where they diffused a universal joy. Too much praise cannot be awarded to Franklin, for his efforts in bringing the matter to a successful issue. His reputation, joined to the proof which he constantly gave of his abilities, enabled him, during his whole residence at the French court, to exercise an influence which no other individual could have done. When we take his labors here, in connection with what he had previously accomplished for the welfare of the United States, we can place his name second only to that of Washington, in the list of those who merit the grateful remembrance of their country.

The treaties having been signed, and the position of the French court, in reference to America, openly proclaimed, all farther restraint was removed, and the commissioners were allowed to take their place at Versailles, as the representatives of an independent government, on the same footing as the ambassadors

* Sparks' Life of Franklin, p. 431.

of the European powers. D'Auberteuil, in describing the ceremony of their introduction to court, thus speaks of Franklin:—"He was accompanied and followed by a great number of Americans and individuals from various countries, whom curiosity had drawn together. His age, his venerable aspect, the simplicity of his dress, every thing fortunate and remarkable in the life of this American, contributed to excite public attention. The clapping of hands, and other expressions of joy, indicated that warmth of enthusiasm which the French are more susceptible of than any other people, and the charm of which is enhanced to the object of it by their politeness and agreeable manners. After this audience, he crossed the court on his way to the office of the minister of foreign affairs. The multitude waited for him in the passage, and greeted him with their acclamations. He met with a similar reception wherever he appeared in Paris." All this testimony of respect was shown him in that most refined court, in spite of the republican manners and dress which he perhaps somewhat ostentatiously displayed. Says Madame Campan, in her memoirs: "His straight, unpowdered hair, his round hat, his brown, cloth coat, formed a singular contrast with the laced and embroidered coats, and powdered and perfumed heads, of the courtiers of Versailles."

As a still farther illustration of the regard in which he was held by the French, an interview which took place between him and Voltaire may be mentioned. The latter had expressed a desire to see the American philosopher, and, upon their meeting in a large company, Voltaire addressed him in English, and continued the conversation in that language. Madame Denis, who stood by, interrupted by reminding him that Franklin understood French, and requested them to converse in that language, so that the rest of the company might know the subject of their discourse. "Excuse me, *ma chere*," said Voltaire, "I have the vanity to show that I am not unacquainted with the language of a Franklin."

A few months after the treaties were concluded, (Sept. 14th, 1778,) Franklin was appointed minister plenipotentiary to the French court. This threw the whole burden of affairs upon him alone; yet, notwithstanding his age and infirmities, he was able to attend to them very successfully. Like every other great man, he had his enemies, who endeavored to find fault with his manner of conducting the official business which devolved upon him; but it is a sufficient refutation of all their charges, that, during his long residence in France, he acquired the confidence of the king and ministry to such a degree that he rarely made a request of them, which was not granted, although the wants of congress, particularly in the article of money, rendered frequent applications necessary. He himself said, that the minister for foreign affairs, the Count de Vergennes, never made him a promise which he did not fulfill, "and it is a fact worthy of being remembered, as bearing upon this subject, that not one of the vast number of drafts, which were drawn on him by congress, throughout the war, was allowed to be protested, or to pass the time of payment, although he relied almost exclusively on the French government for funds to meet them." Sometimes he was told that his heavy drafts subjected the king to much inconvenience; and it can hardly be doubted, that, had they come from any other source, some of them would have been dishonored. Such facts as these abundantly refute all the testimony of his enemies against him. The slanders which they put forth, have long since died away, and are now only remembered to cover their authors with infamy. Such has always been the fate of malicious attempts to injure another's character; but, unfortunately, men are slow to learn this lesson. Little men still live, as they always have done, by carping at the actions of the great.

In 1781, Franklin himself solicited his recall. Congress had refused to grant him a secretary of legation, and he continued alone to discharge the

duties of his office, till the claims of his own nature obliged him to request the appointment of another to his place. Writing to the president of congress, he says: "I must now beg leave to say something relating to myself; a subject with which I have not often troubled the congress. I have passed my seventy-fifth year, and I find, that the long and severe fit of the gout, which I had the last winter, has shaken me exceedingly, and I am yet far from having recovered the bodily strength I before enjoyed. I do not know that my mental faculties are impaired; perhaps I shall be the last to discover that; but I am sensible of great diminution in my activity, a quality I think particularly necessary in your minister for this court. I am afraid, therefore, that your affairs may some time or other suffer by my deficiency. I find, also, that the business is too heavy for me, and too confining. The constant attendance at home, which is necessary for receiving and accepting your bills of exchange (a matter foreign to my ministerial functions), to answer letters, and perform other parts of my employment, prevents my taking the air and exercise, which my annual journeys formerly used to afford me, and which contributed much to the preservation of my health. There are many other little personal attentions, which the infirmities of age render necessary to an old man's comfort, even in some degree to the continuance of his existence, and with which business often interferes.

"I have been engaged in public affairs, and enjoyed public confidence, in some shape or other, during the long term of fifty years, and honor sufficient to satisfy any reasonable ambition; and I have no other left but that of repose, which I hope the congress will grant me, by sending some person to supply my place. At the same time, I beg they may be assured, that it is not any the least doubt of their success in the glorious cause, nor any disgust received in their service, that induces me to decline it, but purely and simply the reasons above

mentioned;—and, as I cannot at present undergo the fatigues of a sea voyage, (the last having been almost too much for me,) and would not again expose myself to the hazard of capture and imprisonment in this time of war, I purpose to remain here at least till the peace; perhaps it may be for the remainder of my life; and, if any knowledge or experience I have acquired here, may be thought of use to my successor, I shall freely communicate it, and assist him with any influence I may be supposed to have, or counsel that may be desired of me.”

Notwithstanding this request, congress felt too highly the importance of his services to accede to it. They refused to appoint his successor, and this directly in the face of all the efforts which had been made to procure his removal. It may be doubted even, whether those of his enemies who really loved their country, would have felt at ease by seeing him removed from a position whose duties they secretly well knew he was most ably discharging.

Soon after this, a new task was imposed upon him. The capture of Cornwallis had sealed the fate of the British armies in America, and parliament at length began to respond to the clamorous voice of the nation for peace. England was tired of the war, and congress appointed five commissioners to meet at Paris, and receive any propositions for peace which she might see fit to offer. Dr. Franklin was one of these, and the manner in which he discharged his duties, showed that his mind was as vigorous as ever, notwithstanding the infirmities of his body. He stated, at the outset, to those who were appointed to negotiate on the part of the British government, what propositions it would be necessary for England to offer, if she desired a complete reconciliation and a lasting peace. These were; first, independence, full and complete in every sense, to the thirteen states; and all troops to be withdrawn from there. Secondly, a settlement of the boundaries of *their* colonies and

the loyal colonies. Thirdly, a confinement of the boundaries of Canada; at least, to what they were before the last act of Parliament, in 1774, if not to a still more contracted state, on an ancient footing. Fourthly, a freedom of fishing on the Banks of Newfoundland, and elsewhere, as well for fish as whales.

Much delay was occasioned by the discussion of these points on both sides; but the American commissioners were unyielding. They plainly signified to the opposite party that England could expect no peace except by unqualifiedly granting each one of them. By their firmness and address, the matter was at length settled; and preliminary articles of peace, upon this footing, were at length signed at Paris, on the 30th of November, 1782. These formed the basis of the definitive treaty of peace which was signed also at Paris, on the 3d of September, 1783. This closed the Revolution, and left the United States free in the sight of the world. Dr. Franklin, in a letter to a friend, thus expresses his sentiments upon this occasion; they are, as another has remarked, worthy to be held in perpetual remembrance by his countrymen:

“Thus the great and hazardous enterprise we have been engaged in, is, God be praised, happily completed; an event I hardly expected I should live to see. A few years of peace, well improved, will restore and increase our strength, but our future safety will depend on our union and our virtue. Britain will be long watching for advantages to recover what she has lost. If we do not convince the world that we are a nation to be depended on for fidelity in treaties; if we appear negligent in paying our debts, and ungrateful to those who have served and befriended us; our reputation, and all the strength it is capable of procuring, will be lost, and fresh attacks upon us will be encouraged and promoted by better prospects of success. Let us, therefore, beware of being lulled into a dangerous security, and of being both enervated and impoverished by luxury;

of being weakened by internal contentions and divisions; of being shamefully extravagant in contracting private debts, while we are backward in discharging honorably those of the public; of neglect in military exercises and discipline, and in providing stores of arms and munitions of war, to be ready on occasion; for all these are circumstances which give confidence to enemies and diffidence to friends; and the expenses required to prevent a war, are much lighter than those that will, if not prevented, be absolutely necessary to maintain it."

Dr. Franklin's great political cares did not wholly shut out philosophical pursuits from his attention. During the latter part of his sojourn in France, the pretended wonders of animal magnetism were making a good deal of noise in the world, and deluding the credulous and weak-minded almost as fully as at the present day. So much stir was made in Paris respecting it, that the king appointed a committee of nine, from the royal academy and faculty of medicine, to examine the claims of the *soi-disant* science. Franklin was honored by being placed at their head. A fair and diligent investigation was made, which continued for several months, during which Mesmer himself, and Geslon, his pupil and partner, were allowed every opportunity of testing their claims before the committee. The result was precisely the same as in every subsequent instance, where the subject has been carefully examined by a body of scientific men. The whole was pronounced a cheat and delusion. That a fair opportunity was given for Mesmer to support his pretensions can not be denied; and whatever may be said of the other members of the committee, certainly no one can doubt that Dr. Franklin would have readily admitted them, could their truth have been at all substantiated. Mesmer was professing to cure all manner of diseases, and Franklin's love for his kind would have been delighted with the truth of such professions; as it was, however, he was forced to pronounce them false. "It

is surprising," he says, in relation to this subject, "how much credulity still subsists in the world."

Dr. Franklin's last official act in France was the signing of a treaty of peace between the United States and Prussia, in 1785. Congress at length yielded to his solicitations, and appointed Mr. Jefferson his successor at the French court; and Franklin, having resided there for eight years and a-half, prepared to return to America. He had left his country nearly at the outset of her struggle for independence; and now, with almost parental solicitude, he wished to go back and witness the result of the successful termination of the contest. He had many friends in France, to some of whom he was strongly attached; but he could not feel the force of their inducements, that he should spend the remainder of his days with them. He left them, with their sincerest regret. He sailed from Havre, for Southampton, in the latter part of July, 1785; and, after a short visit to England, proceeded directly to America. He has left on record a journal kept during the whole voyage, the last entry in which is as follows:

"WEDNESDAY, SEPTEMBER 14th. With the flood in the morning, came a light breeze, which brought us above Gloucester Point, in full view of dear Philadelphia! when we again cast anchor to wait for the health officer, who, having made his visit, and finding no sickness, gave us leave to land. My son-in-law came in a boat for us; we landed at Market street wharf, where we were received by a crowd of people, with huzzas, and accompanied with acclamations quite to my door. Found my family well. God be praised for all his mercies!"

Franklin received an enthusiastic welcome, which abundantly testified to the undiminished esteem and affection for him of his fellow-citizens. His wife had died some years previously, and he now took up his residence with his daughter, hoping to spend his few remaining days in quiet, under her affectionate care. "I am again surrounded by my friends," he writes,

with a fine family of grand-children about my knees, and an affectionate, good daughter and son-in-law, to take care of me;—and, after fifty years' public service, I have the pleasure to find the esteem of my country, with regard to me, undiminished." In his expectation to be free from all further public duties, he was disappointed. He had hardly got settled at home, before he was elected a member of the supreme executive council of Pennsylvania, which was soon followed by his appointment to the presidency of the state, an office equivalent to the governorship in the other states. These duties he would not shrink from, though irksome to him. He entered upon them; and showed, by his labors, that his mind was as vigorous as it ever had been. By the constitution of the state, a man could hold the office of president for only three successive years; after which, he was ineligible to it for the next four years. Franklin was regularly chosen for the three years.

While discharging the duties of this post, he was elected a delegate from Pennsylvania, to the convention for framing a constitution of the United States, which met in Philadelphia, May, 1787. He was now in his eighty-second year, yet we find no flagging of his intellectual powers. His speeches, before the convention, show none of the garrulity of age; but are made in few words, and always bear directly upon the point at issue. Though he could not approve of all the articles finally adopted, yet, seeing that they were the best to be hoped for, he gave them his assent, and labored to bring the members to a unanimous approval of the constitution. "I can not help expressing a wish," said he, "that every member of the convention, who may still have objections to it, would, with me on this occasion, doubt a little of his own infallibility; and, to make *manifest* our *unanimity*, put his name to this instrument."

The following interesting description of his appearance and manner of life, at this period, is extracted

by Sparks, in his *Life of Franklin*,* from a journal written by Rev. Dr. Cutler, of Massachusetts, who was distinguished as a scholar, and, particularly, as a botanist. While at Philadelphia, in July, 1787, he called to pay his respects to the Doctor; and the following is his account of the visit:

“Dr. Franklin lives in Market street; his house stands up a court, at some distance from the street. We found him in his garden, sitting upon a grass plot, under a very large mulberry tree, with several other gentlemen, and two or three ladies. When Mr. Gerry introduced me, he rose from his chair, took me by the hand, expressed his joy at seeing me, welcomed me to the city, and begged me to seat myself close to him. His voice was low, but his countenance open, frank, and pleasing. I delivered to him my letters. After he had read them, he took me again by the hand, and, with the usual compliments, introduced me to the other gentlemen, who were most of them members of the convention.

“Here we entered into a free conversation, and spent our time most agreeably, until it was quite dark. The tea-table was spread under the tree; and Mrs. Bache, who is the only daughter of the Doctor, and lives with him, served it out to the company. She had three of her children about her. They seemed to be exceedingly fond of their grandpapa. The Doctor showed me a curiosity he had just received, and with which he was much pleased. It was a snake with two heads, preserved in a large phial. It was taken near the confluence of the Schuylkill with the Delaware, about four miles from this city. It was about ten inches long, well proportioned, the heads perfect, and united to the body about one-fourth of an inch below the extremities of the jaws. The snake was of a dark brown, approaching to black, and the back beautifully speckled with white. The belly was rather checkered with a reddish

* Page 519.

color, and white. The Doctor supposed it to be full grown, which I think is probable; and he thinks it must be a *sui-generis* of that class of animals. He grounds his opinion of its not being an extraordinary production, but a distinct genus, on the perfect form of the snake, the probability of its being of some age, and there having been found a snake entirely similar, (of which the Doctor has a drawing, which he showed us,) near Lake Champlain, in the time of the late war.

“After it was dark, we went into the house, and he invited me into his library, which is likewise his study. It is a very large chamber, and high-studded. The walls are covered with book-shelves, filled with books; besides, there are four large alcoves, extending two-thirds the length of the chamber, filled in the same manner. I presume this is the largest, and by far the best, private library in America. He showed us a glass machine for exhibiting the circulation of the blood in the arteries and veins of the human body. The circulation is exhibited by the passing of a red fluid from a reservoir into numerous capillary tubes of glass, ramified in every direction, and then returning in similar tubes to the reservoir, which was done with great velocity, without any power to act visibly on the fluid, and had the appearance of perpetual motion. Another great curiosity was a rolling-press, for taking the copies of letters, or any other writing. A sheet of paper is completely copied in less than two minutes; the copy as fair as the original, and without defacing it in the smallest degree. It is an invention of his own, extremely useful in many situations of life. He also showed us his long, artificial *arm and hand*, for taking down and putting up books on high shelves, which are out of reach; and his great arm-chair, with rockers, and a large fan placed over it, with which he fans himself, keeps off the flies, &c., while he sits reading, with only a small motion of the foot; and many other curiosities and inventions, all his

own, but of lesser note. Over his mantel, he has a prodigious number of medals, busts, and casts in wax, or plaster of Paris, which are the effigies of the most noted characters in Europe.

“But what the Doctor wished principally to show me, was a huge volume on botany, which indeed afforded me the greatest pleasure of any one thing in his library. It was a single volume, but so large, that it was with great difficulty that he was able to raise it from a low shelf, and lift it on the table; but, with that senile ambition, which is common to old people, he insisted on doing it himself, and would permit no person to assist him, merely to show us how much strength he had remaining. It contained the whole of Linnæus’ *Systema Vegetabilium*, with large cuts of every plant, colored from nature. It was a feast to me, and the Doctor seemed to enjoy it as well as myself. We spent a couple of hours in examining this volume; while the other gentlemen amused themselves with other matters. The Doctor is not a botanist, but lamented he did not in early life attend to this science. He delights in natural history, and expressed an earnest wish, that I should pursue the plan which I had begun; and hoped this science, so much neglected in America, would be pursued with as much ardor here as it is now in every part of Europe. I wanted, for three months, at least, to have devoted myself entirely to this one volume; but, fearing lest I should be tedious to him, I shut it up, though he urged me to examine it longer.

“He seemed extremely fond, through the course of the visit, of dwelling on philosophical subjects, and particularly that of natural history; while the other gentlemen were swallowed up with politics. This was a favorable circumstance for me; for almost the whole of his conversation was addressed to me, and I was highly delighted with the extensive knowledge he appeared to have of every subject, the brightness of his memory, and clearness and vivacity of all his mental faculties, notwithstanding his age

His manners are perfectly easy, and every thing about him seems to diffuse an unrestrained freedom and happiness. He has an incessant vein of humor, accompanied with an uncommon vivacity, which seems as natural and involuntary as his breathing. He urged me to call on him again, but my short stay would not admit. We took our leave at ten, and I retired to my lodgings."

We now draw near the close of this great man's career. His life had been prolonged far beyond the average lot of his fellow men; and, when the infirmities of old age were joined to other maladies, he became sensible that he was rapidly approaching the grave. For two or three years previously to his death, he was suffering almost constant pain; but there was nothing which seemed to indicate immediate dissolution, till early in April, 1790, when he was attacked with a fever and pain in the breast. Dr. Jones, the physician who attended him during this crisis, gives the following account of his last days:

"The stone, with which he had been afflicted for several years, had, for the last twelve months of his life, confined him chiefly to his bed; and, during the extremely painful paroxysms, he was obliged to take large doses of laudanum to mitigate his tortures. Still, in the intervals of pain, he not only amused himself by reading and conversing cheerfully with his family, and a few friends who visited him, but was often employed in doing business of a public, as well as of a private nature, with various persons who waited upon him for that purpose; and, in every instance, displayed not only the readiness and disposition to do good, which were the distinguishing characteristics of his life, but the fullest and clearest possession of his uncommon abilities. He also not unfrequently indulged in those *jeux d'esprit* and entertaining anecdotes, which were the delight of all who heard them.

"About sixteen days before his death, he was seized with a feverish disposition without any

particular symptoms attending it, till the third or fourth day, when he complained of a pain in his left breast, which increased till it became extremely acute, attended by a cough and laborious breathing. During this state, when the severity of his pains drew forth a groan of complaint, he would observe, that he was afraid he did not bear them as he ought; acknowledging his grateful sense of the many blessings he had received from the Supreme Being, who had raised him, from small and low beginnings, to such high rank and consideration among men; and made no doubt but that his present afflictions were kindly intended to wean him from a world in which he was no longer fit to act the part assigned him. In this frame of body and mind he continued, till five days before his death, when the pain and difficulty of breathing entirely left him; and his family were flattering themselves with the hopes of his recovery; but an imposthume which had formed in his lungs, suddenly burst, and discharged a quantity of matter, which he continued to throw up, while he had power; but, as that failed, the organs of respiration became gradually oppressed; a calm, lethargic state succeeded; and, on the 17th of April, 1790, about eleven o'clock at night, he quietly expired, closing a long and useful life of eighty-four years and three months."

His death occasioned universal regret in America, and many parts of Europe. Testimonials of respect for his memory, were passed by the American congress, the national assembly of France, and various other bodies, political and scientific. The many hearts which had loved him, sorrowed as under the weight of a heavy calamity when the news of his decease reached them.

There has been much discussion respecting Dr. Franklin's religious views. Sceptics have attempted to support their shallow pretensions, by ranking him among the disbelievers in Christianity. Though the matter is of little importance, so far as religion alone is concerned, it becomes of the greatest moment

when considered as affecting Franklin himself. The most important inquiry we can make, when estimating his character, is, How far was his life governed by religious principle? So far as his speculative opinions are concerned, he was very far from rejecting Christianity. He regarded it, to use his own language, "as the best system of religion the world ever saw, or is likely to see." He believed in one God, who ought to be worshiped, and in a future state of rewards and punishments. Of this, we have his own direct testimony. When Paine showed him his "Age of Reason," he censured it, in just terms, as fallacious in argument, and destructive in its tendency, of all good. "You had better burn it," said he, "than print it." His firm belief in an overruling Providence, was fully exhibited in a speech which he made before the convention for forming a constitution of the United States. When that body had been in session four or five weeks, without making any progress in business, Franklin proposed that their daily meetings should be opened with prayer. "In the beginning of the contest with Britain," said he, "when we were sensible of danger, we had daily prayers in this room for the divine protection. Our prayers, sir, were heard; and they were graciously answered. All of us, who were engaged in the struggle, must have observed frequent instances of a superintending Providence in our favor. To that kind Providence, we owe this happy opportunity of consulting in peace on the means of establishing our future national felicity: and have we now forgotten that powerful Friend? or do we imagine we no longer need his assistance? I have lived, sir, a long time; and, the longer I live, the more convincing proofs I see of this truth, *that God governs in the affairs of men*; and, if a sparrow can not fall to the ground without his notice, is it probable that an empire can rise without his aid? We have been assured, sir, in the Sacred Writings, that, 'except the Lord build the house, they labor in vain

that build it.' I firmly believe this; and I also believe, that, without his concurring aid, we shall succeed in this political building no better than the builders of Babel; we shall be divided by our little, partial, local interests, our projects will be confounded, and we ourselves shall become a reproach and a by-word down to future ages; and, what is worse, mankind may hereafter, from this unfortunate instance, despair of establishing government by human wisdom, and leave it to chance, war, and conquest. I therefore beg leave to move, that henceforth prayers, imploring the assistance of Heaven, and its blessing on our deliberations, be held in this assembly every morning, before we proceed to business; and that one or more of the clergy of this city be requested to officiate in that service."

Such were his intellectual views, though we would by no means propound these as conclusive evidence that Franklin was a Christian. Christianity is not a creed, but a life. That a man possess it, something more is necessary than that he have a merely speculative apprehension of its truth or its excellence. The heart must be governed by its power, and the life shaped according to its precepts. That Franklin had this inner energy, by which alone we can determine whether or not he was a Christian, we can not say. Some things would seem to indicate it; but a satisfactory answer will be impossible, till that day when all secrets shall be made known.

His intellectual character belongs to the first rank. This has fully appeared in the preceding history, and need not now be enlarged upon. Perhaps no one has so fully run the career of a philosopher and a statesman, and been so eminent in both. His life marks an era in the history of science, and the history of nations.

All his writings indicate the clearness with which he thought. If argumentative, they are almost always convincing. Says Sir Humphrey Davy: The style and manner of his publication on electricity, are

almost as worthy of admiration as the doctrine it contains. He has endeavoured to remove all mystery and obscurity from the subject. He has written equally for the uninitiated and the philosopher; and has rendered his details amusing as well as perspicuous, elegant as well as simple. He clothes science in his language in a dress wonderfully decorous, the best adapted to display her native loveliness. He has in no instance exhibited that false dignity, by which philosophy is kept aloof from common applications; and has sought rather to make her a useful inmate and servant in the common habitations of man, than to preserve her merely as an object of admiration in temples and palaces.

Franklin's body sleeps by the side of that of his wife, in the cemetery of Christ's Church, Philadelphia. He had left directions in his will, that the two graves should be placed together, and should both be covered with a plain marble slab, containing no other inscription than their names and the year of his decease.

It may be interesting to append here the epitaph which he wrote for himself, before he was twenty-one years old. It is as follows:

"THE BODY OF
BENJAMIN FRANKLIN,
PRINTER,

(Like the cover of an old book,
Its contents torn out,
And stript of its lettering and gilding,
Lies here, food for worms;

But the work shall not be lost,
For it will, as he believed, appear once more,
In a new and more elegant edition,
Revised and corrected,

by
THE AUTHOR."

ESSAYS,

HUMOROUS, MORAL, AND LITERARY.

ON EARLY MARRIAGES,

TO JOHN ALLEYN, ESQ.

DEAR JACK,—You desire, you say, my impartial thoughts on the subject of an early marriage, by way of answer to the numberless objections that have been made, by numerous persons, to your own. You may remember, when you consulted me on the occasion, that I thought youth on both sides to be no objection. Indeed, from the marriages that have fallen under my observation, I am rather inclined to think, that early ones stand the best chance of happiness. The temper and habits of the young are not yet become so stiff and uncomplying, as when more advanced in life; they form more easily to each other, and hence, many occasions of disgust are removed. And if youth has less of that prudence which is necessary to manage a family, yet the parents and elder friends of young married persons are generally at hand to afford their advice, which amply supplies that defect; and, by early marriage, youth is sooner formed to regular and useful life; and possibly some of those incidents or connections, that might have injured the constitution, or reputation, or both, are thereby happily prevented. Particular circumstances of particular persons may possibly sometimes make it prudent to delay entering into that state; but, in general, when nature has rendered our bodies fit for it, the presumption is in nature's

favor, that she has not judged amiss in making us desire it. Late marriages are often attended, too, with this further inconvenience, that there is not the same chance that the parents should live to see their offspring educated. "Late children," says the Spanish proverb, "are early orphans." A melancholy reflection to those whose case it may be! With us in America, marriages are generally in the morning of life: our children are therefore educated and settled in the world by noon; and thus, our business being done, we have an afternoon and evening of cheerful leisure to ourselves, such as our friend at present enjoys. By these early marriages we are blessed with more children; and from the mode among us, founded by nature, of every mother suckling and nursing her own child, more of them are raised. Thence the swift progress of population among us, unparalleled in Europe. In fine, I am glad you are married, and congratulate you most cordially upon it. You are now in the way of becoming a useful citizen; and you have escaped the unnatural state of celibacy for life — the fate of many here, who never intended it, but who, having too long postponed the change of their condition, find, at length, that it is too late to think of it, and so live all their lives in a situation that greatly lessens a man's value. An odd volume of a set of books bears not the value of its proportion to the set. What think you of the odd half of a pair of scissors? it can't well cut any thing; it may possibly serve to scrape a trencher.

Pray make my compliments and best wishes acceptable to your bride. I am old and heavy, or I should ere this have presented them in person. I shall make but small use of the old man's privilege, that of giving advice to younger friends. Treat your wife always with respect; it will procure respect to you, not only from her, but from all that observe it. Never use a slighting expression to her, even in jest; for slights in jest, after frequent bandyings, are apt to end in angry earnest. Be studious in your profession, and you will be learned. Be industrious and frugal, and you will

be rich. Be sober and temperate, and you will be healthy. Be in general virtuous, and you will be happy. At least, you will, by such conduct, stand the best chance for such consequences. I pray God to bless you both! being ever your affectionate friend.

B. FRANKLIN.

ON THE DEATH OF HIS BROTHER,

MR. JOHN FRANKLIN.

TO MISS HUBBARD.

I CONDOLE with you. We have lost a most dear and valuable relation. But it is the will of God and nature, that these mortal bodies be laid aside, when the soul is to enter into real life. This is rather an embryo state, a preparation for living. A man is not completely born until he be dead. Why then should we grieve that a new child is born among the immortals, a new member added to their happy society? We are spirits. That bodies should be lent, while they can afford us pleasure, assist us in acquiring knowledge, or doing good to our fellow creatures, is a kind and benevolent act of God. When they become unfit for these purposes, and afford us pain instead of pleasure, instead of an aid become an incumbrance, and answer none of the intentions for which they were given, it is equally kind and benevolent that a way is provided by which we may get rid of them. Death is that way. We ourselves, in some cases, prudently choose a partial death. A mangled, painful limb, which can not be restored, we willingly cut off. He who plucks out a tooth, parts with it freely, since the pain goes with it: and he who quits the whole body, parts at once with all pains, and possibilities of pains

and diseases it was liable to, or capable of making him suffer.

Our friend and we were invited abroad on a party of pleasure, which is to last forever. His chair was ready first; and he is gone before us. We could not all conveniently start together; and why should you and I be grieved at this, since we are so soon to follow, and know where to find him? Adieu.

B. FRANKLIN.

TO THE LATE DR. MATHER, OF BOSTON.

REV. SIR:

I RECEIVED your kind letter, with your excellent advice to the people of the United States, which I read with great pleasure, and hope it will be duly regarded. Such writings, though they may be lightly passed over by many readers, yet if they make a deep impression on one active mind in a hundred, the effects may be considerable.

Permit me to mention one little instance, which, though it relates to myself, will not be quite uninteresting to you. When I was a boy, I met with a book entitled "Essays to do Good," which, I think, was written by your father. It had been so little regarded by a former possessor, that several leaves of it were torn out; but the remainder gave me such a turn of thinking, as to have an influence on my conduct through life; for I have always set a greater value on the character of a doer of good, than any other kind of reputation; and if I have been, as you seem to think, a useful citizen, the public owes the advantage of it to that book.

You mention your being in your seventy-eighth year. I am in my seventy-ninth. We are grown old

together. It is now more than sixty years since I left Boston; but I remember well both your father and grandfather, having heard them both in the pulpit, and seen them in their houses. The last time I saw your father was the beginning of 1724, when I visited him after my first trip to Pennsylvania. He received me in his library; and, on my taking leave, showed me a shorter way out of the house, through a narrow passage, which was crossed by a beam over head. We were still talking as I withdrew, he accompanying me behind, and I turning partly toward him, when he said hastily, "Stoop! stoop!" I did not understand him, till I felt my head hit against the beam. He was a man who never missed any occasion of giving instruction; and upon this he said to me, "You are young, and have the world before you; stoop as you go through it, and you will miss many hard thumps." This advice, thus beat into my head, has frequently been of use to me; and I often think of it, when I see pride mortified, and misfortunes brought upon people by their carrying their heads too high. -

I long much to see again my native place; and once hoped to lay my bones there. I left it in 1723. I visited it in 1733, 1743, 1753, and 1763; and in 1773 I was in England. In 1775, I had a sight of it, but could not enter, it being in possession of the enemy. I did hope to have been there in 1783, but could not obtain my dismissal from his employment here; and now, I fear I shall never have that happiness. My best wishes, however, attend my dear country "*esto perpetua.*" It is now blessed with an excellent constitution. May it last forever!

This powerful monarchy continues its friendship for the United States. It is a friendship of the utmost importance to our security, and should be carefully cultivated. Britain has not yet well digested the loss of its dominion over us; and has still, at times, some flattering hopes of recovering it. Accidents may increase those hopes, and encourage dangerous attempts. A breach between us and France would infallibly

bring the English again upon our backs; and yet we have some wild beasts among our countrymen, who are endeavoring to weaken that connection.

Let us preserve our reputation, by performing our engagements; our credit, by fulfilling our contracts; and our friends, by gratitude and kindness: for we know not how soon we may again have occasion for all of them.

With great and sincere esteem,
I have the honor to be, Rev. Sir,
Your most obedient and most humble serv't,

B. FRANKLIN.

PASSY, May 12th, 1784.

THE WHISTLE.

A TRUE STORY, WRITTEN TO HIS NEPHEW.

WHEN I was a child, at seven years old, my friends, on a holiday, filled my pockets with coppers. I went directly to a shop where they sold toys for children; and, being charmed with the sound of a *whistle*, that I met by the way, in the hands of another boy, I voluntarily offered him all my money for one. I then came home, and went whistling all over the house, much pleased with my whistle, but disturbing all the family. My brothers, and sisters, and cousins, understanding the bargain I had made, told me I had given four times as much for it as it was worth. This put me in mind what good things I might have bought with the rest of the money; and they laughed at me so much for my folly, that I cried with vexation; and the reflection gave me more chagrin than the whistle gave me pleasure.

This, however, was afterwards of use to me, the impression continuing on my mind; so that often

when I was tempted to buy some unnecessary thing, I said to myself, *Do n't give too much for the whistle;* and I saved my money.

As I grew up, came into the world, and observed the actions of men, I thought I met with many, very many, who *gave too much for the whistle.*

When I saw any one too ambitious of court favors, sacrificing his time in attendance on levees, his repose, his liberty, his virtue, and perhaps his friends, to attain it, I have said to myself, *This man gives too much for his whistle.*

When I saw another fond of popularity, constantly employing himself in political bustle, neglecting his own affairs, and ruining them by that neglect; *He pays indeed,* says I, *too much for his whistle.*

If I knew a miser, who gave up every kind of comfortable living, all the pleasure of doing good to others, all the esteem of his fellow citizens, and the joys of benevolent friendship, for the sake of accumulating wealth; *Poor man,* says I, *you do indeed pay too much for your whistle.*

When I meet a man of pleasure, sacrificing every laudable improvement of the mind, or of his fortune, to mere corporeal sensations; *Mistaken man,* says I, *you are providing pain for yourself instead of pleasure; you give too much for your whistle.*

If I see one fond of fine clothes, fine furniture, fine equipages, all above his fortune, for which he contracts debts, and ends his career in prison; *Alas,* says I, *he has paid dear, very dear for his whistle.*

When I see a beautiful, sweet-tempered girl, married to an ill-natured brute of a husband; *What a pity it is,* says I, *that she has paid so much for a whistle.*

In short, I conceived that a great part of the miseries of mankind were brought upon them by the false estimates they had made of the value of things, and by their giving too much for their *whistle.*

A PETITION TO THOSE

WHO HAVE THE SUPERINTENDENCY OF EDUCATION.

I ADDRESS myself to all the friends of youth, and conjure them to direct their compassionate regards to my unhappy fate, in order to remove the prejudices of which I am the victim. There are twin sisters of us: and the two eyes of man do not more resemble, nor are capable of being upon better terms with each other than my sister and myself, were it not for the partiality of our parents, who made the most injurious distinctions between us. From my infancy I have been led to consider my sister as a being of a more elevated rank. I was suffered to grow up without the least instruction, while nothing was spared in her education. She had masters to teach her writing, drawing, music, and other accomplishments; but if, by chance, I touched a pencil, a pen, or a needle, I was bitterly rebuked; and more than once I have been beaten for being awkward, and wanting a graceful manner. It is true, my sister associated me with her upon some occasions; but she always made a point of taking the lead, calling upon me only from necessity, or to figure by her side.

But conceive not, sirs, that my complaints are instigated merely by vanity. No; my uneasiness is occasioned by an object much more serious. It is the practice of our family, that the whole business of providing for its subsistence falls upon my sister and myself. If any indisposition should attack my sister, — and I mention it in confidence, upon this occasion, that she is subject to the gout, the rheumatism, and cramp, without making mention of other accidents — what would be the fate of our poor family? Must not the regret of our parents be excessive, at having placed so great a difference between sisters who are so perfectly equal? Alas! we must perish from distress: for it would not be in my power even to scrawl a

suppliant petition for relief, having been obliged to employ the hand of another in transcribing the request which I have now the honor to prefer to you.

Condescend, sirs, to make my parents sensible of the injustice of an exclusive tenderness, and of the necessity of distributing their care and affection among all their children equally.

I am, with profound respect, Sirs,
Your obedient servant,

THE LEFT HAND.

THE HANDSOME AND DEFORMED LEG.

THERE are two sorts of people in the world, who, with equal degrees of health and wealth, and the other comforts of life, become the one happy, and the other miserable. This arises very much from the different views in which they consider things, persons, and events: and the effect of those different views upon their own minds.

In whatever situations men can be placed, they may find conveniences and inconveniences: in whatever company, they may find persons and conversation more or less pleasing: at whatever table, they may meet with meats and drinks of better and worse taste, dishes better and worse dressed: in whatever climate, they will find good and bad weather: under whatever government, they may find good and bad laws, and good and bad administration of those laws: in whatever poem, or work of genius, they may see faults and beauties: in almost every face, and every person, they may discover fine features and defects, good and bad qualities.

Under these circumstances, the two sorts of people above mentioned, fix their attention; those who are disposed to be happy, on the conveniences of things,

the pleasant parts of conversation, the well dressed dishes, the goodness of the wines, the fine weather, &c., and enjoy all with cheerfulness. Those who are to be unhappy, think and speak only of the contraries. Hence, they are continually discontented themselves, and, by their remarks, sour the pleasure of society; offend personally many people, and make themselves everywhere disagreeable. If this turn of mind was founded in nature, such unhappy persons would be the more to be pitied. But as the disposition to criticise, and to be disgusted, is, perhaps, taken up originally by imitation, and is, unawares, grown into a habit, which, though at present strong, may nevertheless be cured, when those who have it are convinced of its bad effect on their felicity; I hope this little admonition may be of service to them, and put them on changing a habit, which, though in the exercise it is chiefly an act of imagination, yet it has serious consequences in life, as it brings on real griefs and misfortunes. For as many are offended by, and nobody loves, this sort of people, no one shows them more than the most common civility and respect, and scarcely that; and this frequently puts them out of humor, and draws them into disputes and contentions. If they aim at obtaining some advantage in rank or fortune, nobody wishes them success, or will stir a step, or speak a word to favor their pretensions. If they incur public censure or disgrace, no one will defend or excuse, and many join to aggravate their misconduct, and render them completely odious. If these people will not change this bad habit, and condescend to be pleased with what is pleasing, without fretting themselves or others about the contraries, it is good for others to avoid an acquaintance with them which is always disagreeable, and sometimes very inconvenient, especially when one finds one's self entangled in their quarrels.

An old philosophical friend of mine was grown, from experience, very cautious in this particular, and carefully avoided any intimacy with such people. He had,

Like other philosophers, a thermometer to show him the heat of the weather; and a barometer, to mark when it was likely to prove good or bad; but there being no instrument invented to discover, at first sight, this unpleasing disposition in a person, he, for that purpose, made use of his legs: one of which was remarkably handsome; the other, by some accident, crooked and deformed. If a stranger, at first interview, regarded his ugly leg more than his handsome one, he doubted him. If he spoke of it, and took no notice of the handsome leg, that was sufficient to determine my philosopher to have no further acquaintance with him. Every body has not this two-legged instrument; but every one, with a little attention, may observe signs of that carping, fault-finding disposition, and take the same resolution of avoiding the acquaintance of those infected with it. I, therefore, advise those critical, querulous, discontented, unhappy people, if they wish to be respected and beloved by others, and happy in themselves, they should *leave off looking at the ugly leg.*

CONVERSATION OF A COMPANY OF EPHEMERA.

WITH A SOLILOQUY OF ONE ADVANCED IN AGE.

TO MADAME BRILLIANT.

You may remember, my dear friend, that when we lately spent that happy day in the delightful garden and sweet society of the MOULIN JOLY, I stopped a little in one of our walks, and staid some time behind the company. We had been shown numberless skeletons of a kind of little fly, called an *Ephemera*, whose successive generations, we were told, were bred and expired within the day. I happened to see a living company of them on a leaf, who appeared to be

engaged in conversation. You know I understand all the inferior animal tongues; my too great application to the study of them is the best excuse I can give for the little progress I have made in your charming language. I listened through curiosity to the discourse of these little creatures; but as they, in their national vivacity, spoke three or four together, I could make but little of their conversation. I found, however, by some broken expressions that I heard now and then, they were disputing warmly on the merit of two foreign musicians, one a *cousin*, the other a *muschetto*; in which dispute they spent their time, seeming as regardless of the shortness of their life as if they had been sure of living a month. Happy people, thought I, you live certainly under a wise, just, and mild government, since you have no public grievances to complain of, nor any other subject of contention, but the perfections or imperfections of foreign music. I turned my head from them to an old grey-headed one, who was single on another leaf, and talking to himself. Being amused with his soliloquy, I put it down in writing, in hopes it will likewise amuse her to whom I am so much indebted for the most pleasing of all amusements, her delicious company and heavenly harmony.

"It was," says he, "the opinion of learned philosophers of our race, who lived and flourished long before my time, that this vast world, the *Moulin Joly*, could not itself subsist more than eighteen hours: and I think there was some foundation for that opinion; since, by the apparent motion of the great luminary, that gives life to all nature, and which in my time has evidently declined considerably toward the ocean at the end of the earth, it must then finish its course, be extinguished in the waters that surround us, and leave the world in cold and darkness, necessarily producing universal death and destruction. I have lived seven of those hours; a great age, being no less than four hundred and twenty minutes of time! How very few of us continue so long! I have seen generations born, flourish, and expire. My present friends are the

children and grand-children of the friends of my youth, who are now, alas, no more! And I must soon follow them; for, by the common course of nature, though still in health, I can not expect to live above seven or eight minutes longer. What now avails all my toil and labor, in amassing honey-dew on this leaf, which I can not live to enjoy. What my political struggles I have been engaged in, for the good of my compatriot inhabitants of this bush, or my philosophical studies, for the benefit of our race in general; for in politics (what can laws do without morals?) our present race of ephemera will in the course of minutes become corrupt, like those of other and older bushes, and consequently as wretched: And in philosophy, how small our progress! Alas! art is long, and life is short! My friends would comfort me with the idea of a name, they say, I shall leave behind me; and they tell me I have lived long enough to nature and to glory. But what will fame be to an ephemera who no longer exists? and what will become of all history in the eighteenth hour, when the world itself, even the whole *Moulin Joly*, shall come to its end, and be buried in a universal ruin?"

To me, after all my eager pursuits, no solid pleasures now remain, but the reflection of a long life spent in meaning well, the sensible conversation of a few good lady-ephemera, and now and then a kind smile and a tune from the ever amiable BRILLIANT.

B. FRANKLIN.

MORALS OF CHESS.

PLAYING at chess is the most ancient and universal game known among men; for its original is beyond the memory of history, and it has, for numberless ages, been the amusement of all the civilized nations of Asia, the Persians, the Indians, and the Chinese.

Europe has had it above a thousand years; the Spaniards have spread it over their part of America, and it begins to make its appearance in these States. It is so interesting in itself, as not to need the view of gain to induce engaging in it; and thence, it is never played for money. Those, therefore, who have leisure for such diversions, can not find one that is more innocent; and the following piece, written with a view to correct (among a few young friends) some little improprieties in the practice of it, shows, at the same time, that it may, in its effects on the mind, be not merely innocent, but advantageous to the vanquished as well as the victor.

The game of chess is not merely an idle amusement. Several very valuable qualities of the mind, useful in the course of human life, are to be acquired or strengthened by it, so as to become habits ready on all occasions. For life is a kind of chess, in which we have points to gain, and competitors or adversaries to contend with, and in which there is a vast variety of good and ill events, that are, in some degree, the effects of prudence, or the want of it. By playing at chess, then, we learn,

I. *Foresight*, which looks a little into futurity, considers the consequences that may attend an action: for it is continually occurring to the player, "If I move this piece, what will be the advantage of my new situation? What use can my adversary make of it to annoy me? What other moves can I make to support it, and to defend myself from his attacks?"

II. *Circumspection*, which surveys the whole chess board, or scene of action, the relations of the several pieces and situations, the dangers they are respectively exposed to, the several possibilities of their aiding each other, the probabilities that the adversary may take this or that move, and attack this or the other piece, and what different means can be used to avoid his stroke, or turn its consequences against him.

III. *Caution*, not to make our moves too hastily. This habit is best acquired by observing strictly the

laws of the game, such as, "If you touch a piece, you must move it somewhere; if you set it down, you must let it stand;" and it is, therefore, best that these rules should be observed; as the game thereby becomes more the image of human life, and particularly of war; in which, if you have incautiously put yourself into a bad and dangerous position, you can not obtain your enemy's leave to withdraw your troops, and place them more securely, but you must abide all the consequences of your rashness.

And, lastly, we learn by chess the habit of *not being discouraged by present bad appearances in the state of our affairs*, the habit of *hoping for a favorable change*, and that of persevering in the search of resources. The game is so full of events, there is such a variety of turns in it, the fortune of it is so subject to sudden vicissitudes, and one so frequently, after long contemplation, discovers the means of extricating one's self from a supposed insurmountable difficulty, that one is encouraged to continue the contest to the last, in hopes of victory by our own skill, or at least of giving a stale mate, by the negligence of our adversary. And whoever considers, what in chess he often sees instances of, that particular pieces of success are apt to produce presumption, and its consequent inattention, by which the loss may not be recovered, will learn not to be too much discouraged by the present success of his adversary, nor to despair of final good fortune, upon every little check he receives in the pursuit of it.

That we may, therefore, be induced more frequently to choose this beneficial amusement, in preference to others, which are not attended with the same advantages, every circumstance which may increase the pleasures of it should be regarded; and every action or word that is unfair, disrespectful, or that in any way may give uneasiness, should be avoided, as contrary to the immediate intention of both the players, — which is to pass the time agreeably.

Therefore, first, If it is agreed to play according to the strict rules, then those rules are to be exactly observed by both parties, and should not be insisted on for one side, while deviated from by the other — for this is not equitable.

Secondly, If it is agreed not to observe the rules exactly, but one party demands indulgences, he should then be as willing to allow them to the other.

Thirdly, No false move should ever be made, to extricate yourself out of a difficulty, or to gain an advantage. There can be no pleasure in playing with a person once detected in such unfair practices.

Fourthly, If your adversary is long in playing, you ought not to hurry him, or to express any uneasiness at his delay. You should not sing, nor whistle, nor look at your watch, nor take up a book to read, nor make a tapping with your feet on the floor, or with your fingers on the table, nor do anything that may disturb his attention. For all these things displease; and they do not show your skill in playing, but your craftiness or your rudeness.

Fifthly. You ought not to endeavor to amuse and deceive your adversary, by pretending to have made bad moves, saying that you have now lost the game, in order to make him secure and careless, and inattentive to your schemes; for this is fraud and deceit, not skill in the game.

Sixthly. You must not, when you have gained a victory, use any triumphing or insulting expression, nor show too much pleasure; but endeavor to console your adversary, and make him less dissatisfied with himself, by every kind of civil expression that may be used with truth; such as, "You understand the game better than I, but you are a little inattentive; or, you play too fast; or, you had the best of the game, but something happened to divert your thoughts, and that turned it in my favor."

Seventhly. If you are a spectator while others play, observe the most perfect silence. For, if you give advice, you offend both parties; him against whom

you give it, because it may cause the loss of his game; and him, in whose favor you give it, because, though it be good, and he follows it, he loses the pleasure he might have had, if you had permitted him to think until it had occurred to himself. Even after a move or moves, you must not, by replacing the pieces, show how it might have been placed better; for that displeases, and may occasion disputes and doubts about their true situation. All talking to the players lessens or diverts their attention, and is therefore displeasing. Nor should you give the least hint to either party, by any kind of noise or motion. If you do, you are unworthy to be a spectator. If you have a mind to exercise or show your judgment, do it in playing your own game when you have an opportunity, not in criticising, or meddling with, or counselling the playing of others.

Lastly. If the game is not to be played rigorously, according to the rules above mentioned, then moderate your desire of victory over your adversary, and be pleased with one over yourself. Snatch not eagerly at every advantage offered by his unskillfulness or inattention; but point out to him kindly, that by such a move he places or leaves a piece in danger and unsupported; that by another he will put his king in a perilous situation, &c. By this generous civility, (so opposite to the unfairness above forbidden) you may, indeed, happen to lose the game to your opponent, but you will win what is better, his esteem, his respect, and his affection; together with the silent approbation and good will of impartial spectators.

THE ART OF PROCURING PLEASANT DREAMS.

INSCRIBED TO MISS *****;

BEING WRITTEN AT HER REQUEST.

As a great part of our life is spent in sleep, during which we have sometimes pleasing and sometimes painful dreams, it becomes of some consequence to obtain the one kind and avoid the other; for whether real or imaginary, pain is pain, and pleasure is pleasure. If we can sleep without dreaming, it is well that painful dreams are avoided. If, while we sleep, we can have any pleasing dreams, it is as the French say, *tant gagné*, so much added to the pleasure of life.

To this end it is, in the first place, necessary to be careful in preserving health, by due exercise and great temperance; for in sickness, the imagination is disturbed; and disagreeable, sometimes terrible, ideas are apt to present themselves. Exercise should precede meals, not immediately follow them: the first promotes, the latter, unless moderate, obstructs digestion. If after exercise we feed sparingly, the digestion will be easy and good, the body lightsome, the temper cheerful, and all the animal functions performed agreeably. Sleep, when it follows, will be natural and undisturbed. While indolence, with full feeding, occasions nightmares and horrors inexpressible: we fall from precipices, are assaulted by wild beasts, murderers, and demons, and experience every variety of distress. Observe, however, that the quantities of food and exercise are relative things: those who move much may, and indeed ought, to eat more; those who use little exercise, should eat little. In general, mankind since the improvement of cookery, eat about twice as much as nature requires. Suppers are not bad, if we have not dined; but restless nights naturally follow hearty suppers after full dinners. Indeed, as there is a difference in constitutions, some will rest

after these meals ; it costs them only a frightful dream and an apoplexy, after which they sleep till doomsday. Nothing is more common in the newspapers, than instances of people, who, after eating a hearty supper, are found dead a-bed in the morning.

Another means of preserving health to be attended to, is the having a constant supply of fresh air in your bedchamber. It has been a great mistake, the sleeping in rooms exactly closed, and in beds surrounded by curtains. No outward air that may come into you, is so unwholesome as the unchanged air, often breathed, of a close chamber. As boiling water does not grow hotter by longer boiling, if the particles that receive greater heat can escape ; so living bodies do not putrefy, if the particles, as fast as they become putrid, can be thrown off. Nature expels them by the pores of the skin and lungs, and in a free open air, they are carried off ; but, in a close room, we receive them again and again, though they become more and more corrupt. A number of persons crowded into a small room, thus spoil the air in a few minutes, and even render it mortal, as in the "Black Hole" at Calcutta. A single person is said to spoil only a gallon of air per minute, and therefore requires a longer time to spoil a chamberful ; but it is done, however, in proportion, and many putrid disorders hence have their origin. It is recorded of Methusalem, who, being the longest liver, may be supposed to have best preserved his health, that he slept always in the open air ; for, when he had lived five hundred years, an angel said to him, "Arise Methusalem, and build thee an house, for thou shall live yet five hundred years longer." But Methusalem answered and said, "If I am to live but five hundred years longer, it is not worth while to build me an house — I will sleep in the air as I have been used to do." Physicians, after having for ages contended that the sick should not be indulged with fresh air, have at length discovered that it may do them good. It is therefore to be hoped that they may in time discover likewise, that it is not hurtful to those

who are in health ; and that we may then be cured of the *aërophobia*, that at present distresses weak minds, and makes them choose to be stifled and poisoned, rather than leave open the windows of a bedchamber, or put down the glass of a coach.

Confined air, when saturated with perspirable matter,* will not receive more; and that matter must remain in our bodies, and occasion diseases; but it gives some previous notice of its being about to be hurtful, by producing certain uneasiness, slight indeed, at first, such as, with regard to the lungs, is a trifling sensation, and to the pores of the skin a kind of restlessness which it is difficult to describe, and few that feel it know the cause of it. But we may recollect, that sometimes, on waking in the night, we have, if warmly covered, found it difficult to get to sleep again. We turn often, without finding repose in any position. This fidgettiness, to use a vulgar expression for want of a better, is occasioned wholly by an uneasiness in the skin, owing to the retention of the perspirable matter—the bedclothes having received their quantity, and, being saturated, refusing to take any more. To become sensible of this by an experiment, let a person keep his position in the bed, but throw off the bedclothes, and suffer fresh air to approach the part uncovered of his body; he will then feel that part suddenly refreshed; for the air will immediately relieve the skin, by receiving, licking up, and carrying off the load of perspirable matter that incommoded it. For every portion of cool air that approaches the warm skin, in receiving its part of that vapor, receives therewith a degree of heat, that rarefies and renders it lighter, when it will be pushed away with its burden, by cooler and therefore heavier fresh air; which, for a moment supplies its place, and then, being likewise changed and warmed, gives way to a succeeding

* What physicians call the perspirable matter, is that vapor which passes off from our bodies, from the lungs and through the pores of the skin. The quantity of this is said to be five-eighths of what we eat.

quantity. This is the order of nature, to prevent animals being infected by their own perspiration. He will now be sensible of the difference between the part exposed to the air, and that which, remaining sunk in the bed, denies the air access, for this part now manifests its uneasiness more distinctly by the comparison, and the seat of the uneasiness is more plainly perceived than when the whole surface of the body was affected by it.

Here, then, is one great and general cause of unpleasant dreams. For when the body is uneasy, the mind will be disturbed by it, and disagreeable ideas of various kinds will, in sleep, be the natural consequences. The remedies, preventive and curative, follow:

1. By eating moderately, (as before advised for health's sake,) less perspirable matter is produced in a given time; hence, the bedclothes receive it longer before they are saturated; and we may, therefore, sleep longer, before we are made uneasy by their refusing to receive any more.

2. By using thinner and more porous bedclothes, which will suffer the perspirable matter more easily to pass through them, we are less incommoded, such being longer tolerable.

3. When you are awakened by this uneasiness, and find you cannot easily sleep again, get out of bed, beat up and turn your pillow, shake the bedclothes well, with at least twenty shakes, then throw the bed open, and leave it to cool; in the meanwhile, continuing undressed, walk about your chamber, till your skin has had time to discharge its load, which it will do sooner as the air may be drier and colder. When you begin to feel the cold air unpleasant, then return to your bed; soon you will fall asleep, and your sleep will be sweet and pleasant. All the scenes presented to your fancy will be of the pleasing kind. I am often as agreeably entertained with them, as by the scenery of an opera. If you happen to be too indolent to get out of bed, you may, instead of it, lift up your bed

clothes with one arm and leg, so as to draw in a good deal of fresh air, and by letting them fall, force it out again; this, repeated twenty times, will so clear them of the perspirable matter they have imbibed, as to permit your sleeping well for some time afterward. But this latter method is not equal to the former.

Those who do not love trouble, and can afford to have two beds, will find great luxury in rising, when they wake in a hot bed, and going into a cold one. Such shifting of beds would also be of great service to persons ill of fever, as it refreshes and frequently procures sleep. A very large bed, that will admit a removal so distant from the first situation as to be cool and sweet, may, in a degree, answer the same end.

One or two observations more will conclude this little piece. Care must be taken, when you lie down, to dispose your pillow so as to suit your manner of placing your head, and to be perfectly easy; then place your limbs so as not to bear inconveniently hard upon one another: as, for instance, the joints of your ankles: for, though a bad position may at first give but little pain, and be hardly noticed, yet a continuance will render it less tolerable, and the uneasiness may come on while you are asleep, and disturb your imagination.

These are the rules of the art. But though they will generally prove effectual in producing the end intended, there is a case in which the most punctual observance of them will be totally fruitless. I need not mention the case to you, my dear friend; but my account of the art would be imperfect without it. The case is, when the person who desires to have pleasant dreams, has not taken care to preserve, what is necessary above all things — A GOOD CONSCIENCE.

ADVICE TO A YOUNG TRADESMAN.

WRITTEN ANNO 1748, TO MY FRIEND A. B.

As you have desired it of me, I write the following hints, which have been of service to me, and may, if observed, be so to you.

Remember that *time* is money. He that can earn ten shillings a day by his labor, and goes abroad, or sits idle one half of that day, though he spends but sixpence during his diversion or idleness, ought not to reckon *that* the only expense; he has really spent, or rather thrown away, five shillings besides.

Remember that *credit* is money. If a man lets his money lie in my hands after it is due, he gives me the interest, or so much as I can make of it during that time. This amounts to a considerable sum, where a man has good and large credit, and makes good use of it.

Remember that money is of a prolific generating nature. Money can beget money, and its offspring can beget more, and so on. Five shillings turned is six; turned again it is seven and threepence; and so on till it becomes a hundred pounds. The more there is of it, the more it produces every turning, so that the profits rise quicker and quicker. He that kills a breeding sow, destroys all her offspring to the thousandth generation. He that murders a crown, destroys all that it might have produced, even scores of pounds.

Remember that six pounds a year is but a groat a day. For this little sum, (which may be daily wasted, either in time or expense, unperceived,) a man of credit may, on his own security, have the constant possession and use of a hundred pounds. So much in stock, briskly turned by an industrious man, produces great advantage.

Remember this saying, "The good paymaster is lord of another man's purse." He that is known to pay punctually and exactly to the time he promises, may at any time, and on any occasion, raise all the money his friends can spare. This is sometimes of great use.

After industry and frugality, nothing contributes more to the raising a young man in the world, than punctuality and justice in all his dealings: therefore, never keep borrowed money an hour beyond the time you promised, lest a disappointment shut up your friend's purse forever.

The most trifling actions that affect a man's credit are to be regarded. The sound of your hammer at five in the morning, or nine at night, heard by a creditor, makes him easy six months longer; but if he sees you at a billiard table, or hears your voice at a tavern, when you should be at work, he sends for his money the next day; demands it before he can receive it in a lump.

It shows, besides, that you are mindful of what you owe; it makes you appear a careful, as well as an honest man, and that still increases your credit.

Beware of thinking all your own that you possess, and of living accordingly. It is a mistake that many people who have credit fall into. To prevent this, keep an exact account, for some time, both of your expenses and your income. If you take the pains, at first, to mention particulars, it will have this good effect: you will discover how wonderfully small, trifling expenses mount up to large sums, and will discern what might have been, and may for the future be saved, without occasioning any great inconvenience.

In short, the way to wealth, if you desire it, is as plain as the way to market. It depends chiefly on two words, *industry* and *frugality*; that is, waste neither *time* nor *money*, but make the best use of both. Without industry and frugality, nothing will do, and with them everything. He that gets all he can honestly, and saves all he gets, (necessary expenses excepted,) will certainly become *rich*—If that Being, who governs the world, to whom all should look for a blessing on their honest endeavors, doth not, in his wise providence, otherwise determine.

AN OLD TRADESMAN.

NECESSARY HINTS.

TO THOSE THAT WOULD BE RICH, WRITTEN ANNO 1733.

THE use of money is all the advantage there is in having money.

For six pounds a year, you may have the use of one hundred pounds, provided you are a man of known prudence and honesty.

He that spends a groat a day idly, spends idly above six pounds a year, which is the price for the use of one hundred pounds.

He that wastes idly a groat's worth of his time per day, one day with another, wastes the privilege of using one hundred pounds each day.

He that idly loses five shillings worth of time, loses five shillings, and might as prudently throw five shillings into the sea.

He that loses five shillings, not only loses that sum, but all the advantages that might be made by turning it in dealing; which, by the time that a young man becomes old, will amount to a considerable sum of money.

Again: he that sells upon credit, asks a price for what he sells, equivalent to the principal and interest of his money, for the time he is to be kept out of it; therefore, he that buys upon credit, pays interest for what he buys; and he that pays ready money, might let that money out to use; so that he that possesses any thing he has bought, pays interest for the use of it.

Yet, in buying goods, it is best to pay ready money, because, he that sells upon credit, expects to lose five per cent, by bad debts; therefore, he charges, on all he sells upon credit, an advance that shall make up that deficiency.

Those who pay for what they buy upon credit, pay their share of this advance.

He that pays ready money, escapes, or may escape, that charge.

*A penny saved is two pence clear;
A pin a day's a groat a year.*

THE WAY TO MAKE MONEY PLENTY IN EVERY MAN'S POCKET.

At this time, when the general complaint is, that "money is scarce," it will be an act of kindness to inform the moneyless how they may reinforce their pockets. I will acquaint them with the true secret of money-catching; the certain way to fill empty purses — and how to keep them always full. Two simple rules, well observed, will do the business.

First, Let honesty and industry be thy constant companions; and,

Secondly, Spend one penny less than thy clear gains.

Then shall thy hide-bound pocket soon begin to thrive, and will never again cry with the empty-belly-ache; neither will creditors insult thee, nor want oppress, nor hunger bite, nor nakedness freeze thee. The whole hemisphere will shine brighter, and pleasure spring up in every corner of thy heart. Now, therefore, embrace these rules and be happy. Banish the bleak winds of sorrow from thy mind, and live independent. Then shalt thou be a man, and not hide thy face at the approach of the rich, nor suffer the pain of feeling little when the sons of fortune walk at thy right hand: for independency, whether with little or much, is good fortune, and placeth thee on even ground with the proudest of the golden fleece. O, then, be wise, and let industry walk with thee in the morning, and attend thee until thou reachest the evening hour for rest. Let honesty be as the breath of thy soul, and never forget to have a penny, when all thy

expenses are enumerated and paid; then shalt thou reach the point of happiness, and independence shall be thy shield and buckler, thy helmet and crown; then shall thy soul walk upright, nor stoop to the silken wretch, because he hath riches, nor pocket an abuse, because the hand which offers it wears a ring set with diamonds.

AN ECONOMICAL PROJECT.

[A translation of this letter appeared in one of the daily papers of Paris, about the year 1784. The following is the original piece, with some additions and corrections made by the author.]

TO THE AUTHORS OF THE JOURNAL.

MESSEURS,—You often entertain us with accounts of new discoveries. Permit me to communicate to the public, through your paper, one that has lately been made by myself, and which I conceive may be of great utility.

I was, the other evening, in a grand company, where the new lamp of Messrs. Quinquet and Lange was introduced, and much admired for its splendor; but a general inquiry was made, whether the oil it consumed was not in proportion to the light it afforded, in which case there would be no saving in the use of it. No one present could satisfy us in that point, which all agreed ought to be known, it being a very desirable thing to lessen, if possible, the expense of lighting our apartments, when every other article of family expense was so much augmented.

I was pleased to see this general concern for economy, for I love economy exceedingly.

I went home, and to bed, three or four hours after midnight, with my head full of the subject. An accidental sudden noise, about six in the morning, waked

me, when I was surprised to find my room filled with light; and I imagined, at first, that a number of those lamps had been brought into it; but, rubbing my eyes, I perceived the light came in at the windows. I got up, and looked out, to see what might be the occasion of it, when I saw the sun just rising above the horizon, from whence he poured his rays plentifully into my chamber; my domestic having negligently omitted the preceding evening, to close the shutters.

I looked at my watch, which goes very well, and found that it was but six o'clock; and still thinking it was something extraordinary that the sun should rise so early, I looked into the almanac, where I found it to be the hour given for his rising on that day. I looked forward, too, and found that he was to rise still earlier every day till toward the end of June; and that, at no time in the year he retarded his rising so long as till eight o'clock. Your readers, who with me have never seen any signs of sunshine before noon, and seldom regard the astronomical part of the almanac, will be as much astonished as I was, when they hear of his rising so early; and especially when I assure them, *that he gives light as soon as he rises.* I am convinced of this. I am certain of the fact. One can not be more certain of any fact. I saw it with my own eyes. And having repeated this observation the three following mornings, I found always precisely the same result.

Yet, it so happens, that when I speak of this discovery to others, I can easily perceive by their countenances, though they forbear expressing it in words, that they do not quite believe me. One, indeed, who is a learned natural philosopher, has assured me, that I must certainly be mistaken as to the circumstance of the light coming into my room; for, it being well known, as he says, that there could be no light abroad at that hour, it follows that none could enter from without; and that, of consequence, my windows being accidentally left open, instead of letting in the light, had only served to let out the darkness: and he used

many ingenious arguments to show me how I might, by that means, have been deceived. I own that he puzzled me a little, but he did not satisfy me; and the subsequent observations I made, as above mentioned, confirmed me in my first opinion.

This event has given rise, in my mind, to several serious and important reflections. I considered that, if I had not been awakened so early in the morning, I should have slept six hours longer by the light of the sun, and in exchange, have lived six hours the following night by candle light; and the latter being a much more expensive light than the former, my love of economy induced me to muster up what little arithmetic I was master of, and to make some calculations, which I shall give you, after observing, that utility is, in my opinion, the test of value in matters of invention, and that a discovery which can be applied to no use, or is not good for something, is good for nothing.

I took for the basis of my calculation, the supposition, that there are one hundred thousand families in Paris, and that these families consume in the night half a pound of bougies, or candles, per hour. I think this is a moderate allowance, taking one family with another; for, though I believe some consume less, I know that many consume a great deal more. Then estimating seven hours per day, as the medium quantity between the time of the sun's rising and ours, he rising, during the six following months, from six to eight hours before noon, and there being seven hours, of course, per night, in which we burn candles, the account will stand thus:

In the six months between the 20th of March	
and the 20th of September, there are nights	183
Hours of each night in which we burn candles,	7
<hr/>	
Multiplication gives for total number of hours,	1,281
These 1,281 hours multiplied by 100,000,	
the number of families, gives	- 128,100,000

One hundred twenty-eight millions and one hundred thousand hours, spent at Paris by candle light, which, at half a pound of wax and tallow per hour, gives the weight of	- - - - -	64,050,000
Sixty-four millions and fifty thousand of pounds, which, estimating the whole at the medium price of thirty sols the pound, makes the sum of ninety-six millions and seventy-five thousand livres tournois,	- - - - -	96,075,000

An immense sum! that the people of Paris might save every year, by the economy of using sunshine instead of candles.

If it should be said, that people are apt to be obstinately attached to old customs, and that it will be difficult to induce them to rise before noon, consequently my discovery can be of little use; I answer, *Nil desperandum*. I believe all who have common sense, as soon as they have learnt from this paper, that it is daylight when the sun rises, will contrive to rise with him; and, to compel the rest, I would propose the following regulations:

First. Let a tax be laid of a louis per window, on every window that is provided with shutters to keep out the light of the sun.

Second. Let the same salutary operation of police be made use of to prevent our burning candles that inclined us last winter to be more economical in burning wood; that is, let guards be placed in the shops of the wax and tallow chandlers, and no family be permitted to be supplied with more than one pound of candles per week.

Third. Let guards also be posted to stop all the coaches, &c. that would pass the streets after sunset, except those of physicians, surgeons, and midwives.

Fourth. Every morning, as soon as the sun rises, let all the bells in every church be set a ringing; and if that is not sufficient, let cannon be fired in every

street, to wake the sluggards effectually, and make them open their eyes to see their true interest.

All the difficulty will be in the first two or three days; after which the reformation will be as natural and easy as the present irregularity; for "ce n'est que le premier pas qui coute." Oblige a man to rise at four in the morning, and it is more than probable he shall go willingly to bed at eight in the evening; and having eight hours sleep, he will rise more willingly at four the following morning. But this sum of ninety-six millions and seventy-five thousand livres is not the whole of what may be saved by my economical project. You may observe, that I have calculated upon only one half of the year, and much may be saved in the other, though the days are shorter. Besides, the immense stock of wax and tallow left unconsumed during the summer, will probably make candles much cheaper for the ensuing winter, and continue cheaper as long as the proposed reformation shall be supported.

For the great benefit of this discovery, thus freely communicated and bestowed by me on the public, I demand neither place, pension, exclusive privilege, or any other reward whatever. I expect only to have the honor of it. And yet I know there are little, envious minds, who will, as usual, deny me this, and say, that my invention was known to the ancients, and perhaps they may bring passages out of the old books in proof of it. I will not dispute with these people, that the ancients knew not the sun would rise at certain hours; they possibly had, as we have, almanacs that predicted it; but it does not follow from thence, that they knew he gave light as soon as he rose. This is what I claim as my discovery. If the ancients knew it, it must have been long since forgotten, for it certainly was unknown to the moderns, at least to the Parisians, which to prove, I need use but one plain, simple argument: They are as well instructed, judicious, and prudent a people as exist any where in the world, all professing, like myself, to be lovers of economy; and from the many heavy taxes required from

them by the necessities of the state, have surely reason to be economical. I say, it is impossible that so sensible a people, under such circumstances, should have lived so long by the smoky, unwholesome, and enormously expensive light of candles, if they had really known that they might have had as much pure light of the sun for nothing. I am, &c.

AN ABONNE.

SKETCH OF AN ENGLISH SCHOOL.

FOR THE CONSIDERATION OF THE TRUSTEES OF THE
PHILADELPHIA ACADEMY.

It is expected that every scholar to be admitted into this school be at least able to pronounce and divide the syllables in reading, and to write a legible hand. None to be received that are under — years of age.

FIRST, OR LOWEST CLASS.

Let the first class learn the English grammar rules, and at the same time let particular care be taken to improve them in orthography. Perhaps the latter is best done by pairing the scholars; two of those nearest equal in their spelling to be put together. Let these strive for victory; each propounding ten words every day to the other to be spelled. He that spells truly most of the other's words, is victor for that day; he that is victor most days in a month, to obtain a prize, a pretty neat book of some kind, useful in their future studies. This method fixes the attention of children extremely to the orthography of words, and makes them good spellers very early. It is a shame for a man to be so ignorant of this little art in his own language, as to be perpetually confounding words of

like sound and different significations; the consciousness of which defect makes some men, otherwise of good learning and understanding, averse to writing even a common letter.

Let the pieces read by the scholars in this class be short; such as Croxall's Fables, and little stories. In giving the lesson, let it be read to them; let the meaning of the difficult words in it be explained to them; and let them con it over by themselves before they are called to read to the master or usher; who is to take particular care that they do not read too fast, and that they duly observe the stops and pauses. A vocabulary of the most useful difficult words might be formed for their use, with explanations; and they might daily get a few of those words and explanations by heart, which would a little exercise their memories; or at least they might write a number of them in a small book for the purpose, which would help to fix the meaning of those words in their minds, and at the same time furnish every one with a little dictionary for his future use.

SECOND CLASS.

To be taught reading with attention, and with proper modulations of the voice, according to the sentiment and the subject.

Some short pieces, not exceeding the length of a Spectator, to be given this class for lessons (and some of the easier Spectators would be very suitable for the purpose.) These lessons might be given every night as a task; the scholars to study them against the morning. Let it then be required of them to give an account, first of the parts of speech, and construction of one or two sentences. This will oblige them to recur frequently to their grammar, and fix its principal rules in their memory. Next, of the intention of the writer, or the scope of the piece, the meaning of each sentence, and of every uncommon word. This would early acquaint them with the meaning and force of

words, and give them that most necessary habit of reading with attention.

The master then to read the piece with the proper modulations of voice, due emphasis, and suitable action, where action is required; and put the youth on imitating his manner.

Where the author has used an expression not the best, let it be pointed out; and let his beauties be particularly remarked to the youth.

Let the lessons for reading be varied, that the youth may be made acquainted with good styles of all kinds in prose and verse, and the proper manner of reading each kind—sometimes a well told story, a piece of a sermon, a general's speech to his soldiers, a speech in a tragedy, some part of a comedy, an ode, a satire, a letter, blank verse, Hudibrastic, heroic, &c. But let such lessons be chosen for reading, as contain some useful instruction, whereby the understanding or morals of the youth may at the same time be improved.

It is required that they should first study and understand the lessons, before they are put upon reading them properly; to which end each boy should have an English dictionary to help him over difficulties. When our boys read English to us, we are apt to imagine they understand what they read, because we do, and because it is their mother tongue. But they often read, as parrots speak, knowing little or nothing of the meaning. And it is impossible a reader should give the due modulation to his voice, and pronounce properly, unless his understanding goes before his tongue, and makes him master of the sentiment. Accustoming boys to read aloud what they do not first understand, is the cause of those even set tones so common among readers, which, when they have once got a habit of using, they find so difficult to correct; by which means, among fifty readers, we scarcely find a good one. For want of good reading, pieces published with a view to influence the minds of men, for their own or the public benefit, lose half their force. Were there but one good reader in a neighborhood, a

public orator might be heard throughout a nation with the same advantages, and have the same effect upon his audience, as if they stood within the reach of his voice.

THIRD CLASS.

To be taught speaking properly and gracefully; which is near a-kin to good reading, and naturally follows it in the studies of youth; let the scholars of this class begin with learning the elements of rhetoric from some short system, so as to be able to give an account of the most useful tropes and figures. Let all their bad habits of speaking, all offenses against good grammar, all corrupt or foreign accents, and all improper phrases be pointed out to them. Short speeches from the Roman or other history, or from the parliamentary debates, might be got by heart, and delivered with the proper action, &c. Speeches and scenes in our best tragedies and comedies (avoiding every thing that could injure the morals of youth) might likewise be got by rote, and the boys exercised in delivering or acting them; great care being taken to form their manner after the truest models.

For their further improvement, and a little to vary their studies, let them now begin to read history, after having got by heart a short table of the principal epochas in chronology. They may begin with Rollin's Ancient and Roman Histories, and proceed at proper hours, as they go through the subsequent classes, with the best histories of our own nation and colonies. Let emulation be excited among the boys, by giving, weekly, little prizes, or rather small encouragements to those who are able to give the best account of what they have read, as to times, places, names of persons, &c. This will make them read with attention, and imprint the history well in their memories. In remarking on the history, the master will have fine opportunities of instilling instruction of various kinds, and improving the morals, as well as the understandings, of youth.

The natural and mechanic history, contained in the *Spectator de la Nature*, might also be begun in this class, and continued through the subsequent classes, by other books of the same kind; for, next to the knowledge of duty, this kind of knowledge is certainly the most useful, as well as the most entertaining. The merchant may thereby be enabled better to understand many commodities in trade; the handicraftsman to improve his business by new instruments, mixtures, and materials, and frequently hints are given for new manufactures, on new methods of improving land, that may be set on foot, greatly to the advantage of a country.

FOURTH CLASS.

To be taught composition. Writing one's own language well, is the next necessary accomplishment after good speaking. It is the writing-master's business to take care that the boys make fair characters, and place them straight and even in the lines; but to form their style, and even to take care that the stops and capitals are properly disposed, is the part of the English master. The boys should be put on writing letters to each other on any common occurrences, and on various subjects, imaginary business, &c. containing little stories, accounts of their late reading, what parts of authors please them, and why; letters of congratulation, of compliment, of request, of thanks, of recommendation, of admonition, of consolation, expostulation, excuse, &c. In these they should be taught to express themselves clearly, concisely, and naturally, without affected words or high-flown phrases. All their letters to pass through the master's hand, who is to point out the faults, advise the corrections, and commend what he finds right. Some of the best letters published in our own language, as Sir William Temple's, those of Pope and his friends, and some others, might be set before the youth as models, their beauties pointed out and explained by the master, the letters themselves transcribed by the scholar.

Dr. Johnson's *Ethices Elementa*, or First Principles of Morality, may now be read by the scholars, and explained by the master, to lay a solid foundation of virtue and piety in their minds. And as this class continues the reading of history, let them now, at proper hours, receive some further instruction in chronology, and in that part of geography (from the mathematical master) which is necessary to understand the maps and globes. They should also be acquainted with the modern names of the places they find mentioned in ancient writers. The exercise of good reading, and proper speaking, still continued at suitable times.

FIFTH CLASS.

To improve the youth in composition, they may now, besides continuing to write letters, begin to write little essays in prose, and sometimes in verse; not to make them poets, but for this reason, that nothing acquaints a lad so speedily with a variety of expression, as the necessity of finding such words and phrases as well suit the measure, sound, and rhyme of verse, and at the same time will express the sentiment. These essays should all pass under the master's eye, who will point out their faults, and put their writers on correcting them. Where the judgment is not ripe enough for forming new essays, let the sentiments of a Spectator be given, and required to be clothed in the scholar's own words; or the circumstances of some good story; the scholar to find expression. Let them be put sometimes on abridging a paragraph of a diffuse author: sometimes on dilating or amplifying what is wrote more closely. And now let Dr. Johnson's *Noetica*, or First Principles of Human Knowledge, containing a logic or art of reasoning, &c. be read by the youth, and the difficulties that may occur to them, be explained by the master. The reading of history, and the exercise of good reading and just speaking, still continued.

SIXTH CLASS.

In this class, besides continuing the studies of the preceding in history, rhetoric, logic, moral and natural philosophy, the best English authors may be read and explained; as Tillotson, Milton, Locke, Addison, Pope, Swift, the higher papers in the Spectator and Guardian, the best translations of Homer, Virgil, and Horace, of Telemachus, Travels of Cyrus, &c.

Once a year let there be public exercises in the hall; the trustees and citizens present. Then let fine gilt books be given as prizes to such boys as distinguish themselves, and excel the others in any branch of learning, making three degrees of comparison; giving the best prize to him that performs best; a less valuable one to him that comes up next to the best; another to the third. Commendations, encouragement, and advice to the rest, keeping up their hopes, that by industry they may excel another time. The names of those that obtain the prize to be yearly printed in a list.

The hours of each day are to be divided and disposed in such a manner that some classes may be with the writing master, improving their hands, others with the mathematical master, learning arithmetic, accounts, geography, use of the globes, drawing, mechanics, &c.; while the rest are in the English school under the English master's care.

Thus instructed, youth will come out of this school fitted for learning any business, calling, or profession, except in such wherein languages are required; and though unacquainted with any ancient or foreign tongue, they will be masters of their own, which is of more immediate and general use; and withal, will have attained many other valuable accomplishments: the time usually spent in acquiring those languages, often without success, being here employed in laying such a foundation of knowledge and ability, as properly improved, may qualify them to pass through and execute the several offices of civil life, with advantage and reputation to themselves and country.

ON MODERN INNOVATIONS

IN THE ENGLISH LANGUAGE, AND IN PRINTING.

TO NOAH WEBSTER, JUN. ESQ. AT HARTFORD.

" PHILADELPHIA, Dec. 26, 1789.

" DEAR SIR,—

" I received, some time since, your 'Dissertation on the English Language.' It is an excellent work, and will be greatly useful in turning the thoughts of our countrymen to correct writing. Please to accept my thanks for it, as well as for the great honor you have done me in its dedication. I ought to have made this acknowledgment sooner, but much indisposition prevented me.

" I can not but applaud your zeal for preserving the purity of our language, both in its expression and pronunciation, and in correcting the popular errors several of our states are continually falling into with respect to both. Give me leave to mention some of them, though possibly they may have already occurred to you. I wish, however, that in some future publication of yours, you would set a discountenancing mark upon them. The first I remember is the word *improved*. When I left New England, in the year 1723, this word had never been used among us, as far as I know, but in the sense of ameliorated, or made better, except once, in a very old book of Dr. Mather's, entitled "Remarkable Providences." As that man wrote a very obscure hand, I remember that when I read that word in his book, used instead of the word *employed*, I conjectured that it was an error of the printer, who had mistaken a short *l* in the writing for an *r*, and a *y* with too short a tail for a *v*, whereby *employed* was converted into *improved*: but when I returned to Boston in 1733, I found this change had obtained favor, and was then become common; for I met with it often in perusing the newspapers, where it frequently made an appearance rather ridiculous. Such, for instance,

as the advertisement of a country house, which had been many years *improved* as a tavern; and, in the character of a deceased country gentleman, that he had been for more than thirty years improved as a justice of the peace. This use of the word improve is peculiar to New England, and not to be met with among any other speakers of English, either on this or the other side of the water.

During my late absence in France, I find that several other words have been introduced into our parliamentary language. For example, I find a verb formed from the substantive notice: I should not have noticed this, were it not that the gentlemen, &c. Also, another verb from the substantive advocate: The gentleman who advocates, or who has advocated that motion, &c. Another from the substantive progress, the most awkward and abominable of the three: The committee having progressed, resolved to adjourn. The word opposed, though not a new word, I find used in a new manner, as, The gentlemen who are opposed to this measure, to which I have also myself always been opposed. If you should happen to be of my opinion with respect to those innovations, you will use your authority in reprobating them.

The Latin language, long the vehicle used in distributing knowledge among the different nations of Europe, is daily more and more neglected; and one of the modern tongues, viz. French, seems in point of universality, to have supplied its place. It is spoken in all the courts of Europe; and most of the literati, those even who do not speak it, have acquired a knowledge of it, to enable them easily to read the books that are written in it. This gives a considerable advantage to that nation. It enables its authors to inculcate and spread through other nations such sentiments and opinions, on important points, as are most conducive to its interests, or which may contribute to its reputation by promoting the common interests of mankind. It is, perhaps, owing to its being written in French, that Voltaire's Treatise on Toleration has had

so sudden and so great an effect upon the bigotry of Europe, as almost entirely to disarm it. The general use of the French language has likewise a very advantageous effect on the profits of the bookselling branch of commerce; it being well known that the more copies can be sold that are struck off from one composition of types, the profits increase in a much greater proportion than they do in making a greater number of pieces in any other kind of manufacture. And at present there is no capital town in Europe without a French bookseller's shop corresponding with Paris. Our English bids fair to obtain the second place. The great body of excellent printed sermons in our language, and the freedom of our writings on political subjects, have induced a great number of divines, of different sects and nations, as well as gentlemen concerned in public affairs, to study it at least so far as to read it. And if we were to endeavor the facilitating its progress, the study of our tongue might become much more general. Those who have employed some part of their time in learning a new language, must have frequently observed, that while their acquaintance with it was imperfect, difficulties, small in themselves, have operated as great ones in obstructing their progress. A book, for example, ill printed, or a pronunciation in speaking not well articulated, would render a sentence unintelligible, which, from a clear print or a distinct speaker, would have been immediately comprehended. If, therefore, we would have the benefit of seeing our language more generally known among mankind, we should endeavor to remove all the difficulties, however small, that discourage the learning of it. But I am sorry to observe that of late years, those difficulties, instead of being diminished, have been augmented.

In examining the English books that were printed between the restoration and the accession of George the Second, we may observe that all substantives were begun with a capital, in which we imitated our mother tongue, the German. This was more particularly

useful to those who were not well acquainted with the English, there being such a prodigious number of our words that are both verbs and substantives, and spelt in the same manner, though often accented differently in pronunciation. This method has, by the fancy of printers, of late years, been entirely laid aside; from an idea, that suppressing the capitals shows the character to greater advantage; those letters, prominent above the line, disturbing its even, regular appearance. The effect of this change is so considerable, that a learned man of France, who used to read our books, though not perfectly acquainted with our language, in conversation with me on the subject of our authors, attributed the greater obscurity he found in our modern books, compared with those of the period above mentioned, to a change of style for the worse in our writers; of which mistake I convinced him, by marking for him each substantive with a capital in a paragraph, which he then easily understood, though before he could not comprehend it. This shows the inconvenience of that pretended improvement.

From the same fondness for a uniform and even appearance of characters in a line, the printers have of late banished, also, the italic types, in which words of importance to be attended to in the sense of the sentence, and words on which an emphasis should be put in reading, used to be printed. And lately, another fancy has induced other printers to use the round *s* instead of the long one, which formerly served well to distinguish a word readily by its varied appearance. Certainly the omitting this prominent letter makes a line appear more even, but renders it less immediately legible; as the paring of all men's noses might smooth their features, but would render their physiognomies less distinguishable. Add to all these improvements backwards, another modern fancy that *gray* printing is more beautiful than black. Hence the English new books are printed in so dim a character as to be read with difficulty by old eyes, unless in a very strong light, and with good glasses. Whoever compares a

volume of the Gentleman's Magazine, printed between the years 1731 and 1740, with one of those printed in the last ten years, will be convinced of the much greater degree of perspicuity given by the black than by the gray. Lord Chesterfield pleasantly remarked this difference to Faulkener, the printer of the Dublin Journal, who was vainly making encomiums on his own paper as the most complete of any in the world. "But, Mr. Faulkener," says my Lord, "don't you think it might be still further improved, by using paper and ink not quite so near of a color?" For all these reasons I can not but wish our American printers would, in their editions, avoid these fancied improvements, and thereby render their works more agreeable to foreigners in Europe, to the great advantage of our dookselling commerce.

Further, to be more sensible of the advantage of clear and distinct printing, let us consider the assistance it affords to reading well aloud to an auditory. In so doing, the eye generally slides forward three or four words before the voice. If the sight clearly distinguishes what the coming words are, it gives time to order the modulation of the voice, to express them properly. But if they are obscurely printed, or disguised by omitting the capitals and long *f*'s, or otherwise, the reader is apt to modulate wrong; and, finding he has done so, he is obliged to go back and begin the sentence again, which lessens the pleasure of the hearers. This leads me to mention an old error in our mode of printing. We are sensible, that when a question is met with in the reading, there is a proper variation to be used in the management of the voice: we have, therefore, a point called an interrogation affixed to the question, to distinguish it. But this is absurdly placed at its end, so that the reader does not discover it till he finds that he was wrongly modulating his voice, and is therefore obliged to begin again the sentence. To prevent this, the Spanish printers, more sensibly, place an interrogation at the beginning as well as at the end of the question. We have

another error of the same kind in printing plays, where something often occurs that is marked as spoken *aside*. But the word *aside* is placed at the end of the speech, when it ought to precede it, as a direction to the reader, that he may govern his voice accordingly. The practice of our ladies, in meeting five or six together, to form little busy parties, where each is employed in some useful work, while one reads to them, is so commendable in itself, that it deserves the attention of authors and printers, to make it as pleasing as possible, both to the readers and hearers.

My best wishes attend you, being, with sincere esteem, Sir,

Your most obedient and
Very humble servant,

B. FRANKLIN.

AN ACCOUNT OF THE HIGHEST COURT OF JUDICATURE
TRINES IN PENNSYLVANIA, VIZ.

THE COURT OF THE PRESS.

THE POWER OF THIS COURT.

It may receive and promulgate accusations of all kinds, against all persons and characters among the citizens of the state, and against all inferior courts; and may judge, sentence, and condemn to infamy, not only private individuals, but public bodies, &c. with or without inquiry or hearing, at the court's discretion.

WHOSE FAVOR, OR FOR WHOSE EMOLUMENTS THIS COURT
IS ESTABLISHED.

In favor of about one citizen in five hundred, who, by education or practice in scribbling, has acquired a tolerable style as to grammar and construction, so as

to bear printing; or who is possessed of a press and a few types. This five-hundredth part of the citizens have the liberty of accusing and abusing the other four hundred and ninety-nine parts at their pleasure; or they may hire out their pens and press to others for that purpose.

PRACTICE OF THIS COURT.

It is not governed by any of the rules of the common courts of law. The accused is allowed no grand jury to judge of the truth of the accusation before it is publicly made; nor is the name of the accuser made known to him, nor has he an opportunity of confronting the witnesses against him, for they are kept in the dark, as in the Spanish court of inquisition. Nor is there any petty jury of his peers sworn to try the truth of the charges. The proceedings are also sometimes so rapid that an honest good citizen may find himself suddenly and unexpectedly accused, and in the same moment judged and condemned, and sentence pronounced against him that he is a rogue and a villain. Yet if an officer of this court receives the slightest check for misconduct in this his office, he claims immediately the rights of a free citizen by the constitution, and demands to know his accuser, to confront the witnesses, and have a fair trial by the jury of his peers.

THE FOUNDATION OF ITS AUTHORITY.

It is said to be founded on an article in the state constitution, which establishes the liberty of the press—a liberty which every Pennsylvanian would fight and die for, though few of us, I believe, have distinct ideas of its nature and extent. It seems, indeed, somewhat like the liberty of the press that felons have, by the common law of England before conviction; that is, to be either pressed to death or hanged. If, by the liberty of the press, were understood merely the liberty of discussing the propriety of public measures and

political opinions, let us have as much of it as you please; but if it means the liberty of affronting, calumniating, and defaming one another, I, for my part, own myself willing to part with my share of it, whenever our legislators shall please to alter the law; and shall cheerfully consent to exchange my liberty of abusing others, for the privilege of not being abused myself.

BY WHOM IT IS COMMISSIONED OR CONSTITUTED.

It is not by any commission from the supreme executive council, who might previously judge of the abilities, integrity, knowledge, &c. of the persons to be appointed to this great trust, of deciding upon the characters and good fame of the citizens: for this court is above that council, and may accuse, judge, and condemn it at pleasure. Nor is it hereditary, as is the court of *dernier resort* in the peerage of England. But any man who can procure pen, ink, and paper, with a press, a few types, and a large pair of blacking balls, may commissionate himself, and his court is immediately established in the plenary possession and exercise of its rights; for if you make the least complaint of the judge's conduct, he daubs his blacking balls in your face wherever he meets you; and, besides tearing your private character to splinters, marks you out for the odium of the public, as an enemy to the liberty of the press.

OF THE NATURAL SUPPORT OF THIS COURT.

Its support is founded in the depravity of such minds as have not been mended by religion, nor improved by good education.

“There is a lust in man no charm can tame,
Of loudly publishing his neighbor's shame.”

Hence,

“On eagle's wings immortal scandals fly,
While virtuous actions are but born and die.”—*Dryden*.

Whoever feels pain in hearing a good character of his neighbor, will feel a pleasure in the reverse. And of those who, despairing to rise to distinction by their virtues, are happy if others can be depressed to a level with themselves, there are a number sufficient in every great town, to maintain one of those courts by subscription. A shrewd observer once said, that in walking the streets of a slippery morning, one might see where the good natured people lived, by the ashes thrown on the ice before the doors: probably he would have formed a different conjecture of the temper of those whom he might find engaged in such subscriptions.

OF THE CHECKS PROPER TO BE ESTABLISHED AGAINST THE
ABUSES OF POWER IN THOSE COURTS.

Hitherto there are none. But since so much has been written and published on the federal constitution, and the necessity of checks, in all parts of good government, has been so clearly and learnedly explained, I find myself so far enlightened as to suspect some check may be proper in this part also; but I have been at a loss to imagine any that may not be construed an infringement of the sacred liberty of the press. At length, however, I think I have found one that, instead of diminishing general liberty, shall augment it; which is, by restoring the people to a species of liberty, of which they have been deprived by our laws—I mean the liberty of the cudgel! In the rude state of society, prior to the existence of laws, if one man gave another ill language, the affronted person might return it by a box on the ear; and, if repeated, by a good drubbing; and this without offending against any law: but now the right of making such returns is denied, and they are punished as breaches of the peace, while the right of abusing seems to remain in full force; the laws made against it being rendered ineffectual by the liberty of the press.

My proposal, then, is to leave the liberty of the press untouched, and to be exercised in its full extent, force, and vigor, but to permit the liberty of the cudgel to go with it, *pari passu*. Thus, my fellow-citizens, if an impudent writer attacks your reputation — dearer, perhaps, to you than your life, and puts his name to the charge, you may go to him as openly, and break his head. If he conceals himself behind the printer, and you can, nevertheless, discover who he is, you may, in like manner, waylay him in the night, attack him behind, and give him a good drubbing. If your adversary hires better writers than himself to abuse you more effectually, you may hire as many porters, stronger than yourself, to assist you in giving him a more effectual drubbing. Thus far goes my project as to *private* resentment and retribution. But if the public should ever happen to be affronted, as it ought to be, with the conduct of such writers, I would not advise proceeding immediately to these extremities, but that we should in moderation content ourselves with tarring and feathering, and tossing in a blanket.

If, however, it should be thought, that this proposal of mine may disturb the public peace, I would then humbly recommend to our legislators to take up the consideration of both liberties, that of the press, and that of the cudgel: and by an explicit law, mark their extent and limits; and at the same time that they secure the person of a citizen from assaults, they would likewise provide for the security of his reputation.

PAPER: A POEM.

Some wit of old — such wits of old there were —
Whose hints showed meaning, whose allusions care
By one brave stroke to mark all human kind,
Called clear blank paper every infant mind;
When still, as opening sense her dictates wrote,
Fair virtue put a seal, or vice a blot.

The thought was happy, pertinent, and true ;
 Methinks a genius might the plan pursue.
 I,—can you pardon my presumption ?— I,
 No wit, no genius, yet for once will try.

Various the papers, various wants produce,
 The wants of fashion, elegance, and use :
 Men are as various ; and, if right I scan,
 Each sort of *paper* represents some *man*.

Pray note the fop—half powder and half lace,
 Nice as a bandbox were his dwelling place ;
 He's the *gilt paper*, which apart you store,
 And lock from vulgar hands in the 'scrutoire.

Mechanics, servants, farmers, and so forth,
 Are *copy paper*, of inferior worth ;
 Less prized, more useful, for your desk decreed,
 Free to all pens, and prompt at every need.

The wretch whom avarice bids to pinch and spare,
 Starve, cheat, and pilfer, to enrich an heir,
 Is coarse *brown paper* ; such as pedlars choose
 To wrap up wares, which better men will use.

Take next the miser's contrast, who destroys
 Health, fame, and fortune, in a round of joys.
 Will any paper match him ? Yes, throughout,
 He's a true *sinking paper*, past all doubt.

The retail politician's anxious thought
 Deems *this* side always right, and *that* stark nought ;
 He foams with censure : with applause he raves—
 A dupe to rumors, and a tool of knaves ;
 He'll want no type his weakness to proclaim,
 While such a thing as *fools-cap* has a name.

The hasty gentleman whose blood runs high,
 Who picks a quarrel, if you step awry,
 Who can't a jest, or hint, or look endure :
 What is he ? What ? *touch-paper*, to be sure.

What are our poets, take them as they fall,
 Good, bad, rich, poor, much read, not read at all ?
 Them and their works in the same class you'll find ;
 They are the mere *waste paper* of mankind.

Observe the maiden, innocently sweet,
 She's fair *white paper*, an unsullied sheet ;
 On which the happy man, whom fate ordains,
 May write his *name*, and take her for his pains.

One instance more, and only one, I'll bring;
 'T is the *great man*, who scorns a little thing,
 Whose thoughts, whose deeds, whose maxims are his own,
 Formed on the feelings of his heart alone;
 True, genuine *royal paper* is his breast;
 Of all the kinds most precious, purest, best.

ON THE ART OF SWIMMING.

IN ANSWER TO SOME INQUIRIES OF M. DUBOURG,* ON
 THE SUBJECT.

I AM apprehensive that I shall not be able to find leisure for making all the disquisitions and experiments which would be desirable on the subject. I must, therefore, content myself with a few remarks.

The specific gravity of some human bodies, in comparison to that of water, has been examined by M. Robinson, in our Philosophical Transactions, vol. 50, page 30, for the year 1757. He asserts that fat persons, with small bones, float most easily upon water.

The diving bell is accurately described in our Transactions.

When I was a boy, I made two oval pallets, each about ten inches long, and six broad, with a hole for the thumb, in order to retain it fast in the palm of my hand. They much resemble a painter's pallets. In swimming, I pushed the edges of these forward, and I struck the water with their flat surfaces as I drew them back. I remember I swam faster by means of these pallets, but they fatigued my wrists. I also fitted to the soles of my feet a kind of sandals; but I was not satisfied with them, because I observed that the stroke is partly given by the inside of the feet and the ankles, and not entirely with the soles of the feet.

*Translator of Dr. Franklin's Works into French

We have here waistcoats for swimming, which are made of double sailcloth, with small pieces of cork quilted in between them.

I know nothing of the *Scaphandre* of M. de la Chappelle.

I know by experience, that it is a great comfort to a swimmer, who has a considerable distance to go, to turn himself sometimes on his back, and to vary in other respects, the means of procuring a progressive motion.

When he is seized with the cramp in the leg, the method of driving it away is to give to the parts affected a sudden, vigorous, and violent shock; which he may do in the air, as he swims on his back.

During the great heats of summer, there is no danger of bathing, however warm we may be, in rivers which have been thoroughly warmed by the sun. But to throw one's self into cold spring water, when the body has been heated by exercise in the sun, is an imprudence which may prove fatal. I once knew an instance of four young men, who, having worked at harvest in the heat of the day, with a view of refreshing themselves, plunged into a spring of cold water; two died upon the spot; a third the next morning, and the fourth recovered with great difficulty. A copious draught of cold water, in similar circumstances, is frequently attended with the same effect, in North America.

The exercise of swimming is one of the most healthy and agreeable in the world. After having swam for an hour or two in the evening, one sleeps coolly the whole night, even during the most ardent heat of summer. Perhaps the pores being cleansed, the insensible perspiration increases, and occasions this coolness. It is certain that much swimming is the means of stopping a diarrhœa, and even of producing a constipation. With respect to those who do not know how to swim, or who are affected with a diarrhœa at a season which does not permit them to use that exercise, a warm bath, by cleansing and purifying the

skin, is found very salutary, and often effects a radical cure. I speak from my own experience, frequently repeated, and that of others to whom I have recommended this.

You will not be displeas'd if I conclude these hasty remarks by informing you, that as the ordinary method of swimming is reduced to the act of rowing with the arms and legs, and is consequently a laborious and fatiguing operation when the space of water to be crossed is considerable; there is a method in which a swimmer may pass to a great distance with much facility, by means of a sail. This discovery I fortunately made by accident, and in the following manner:

When I was a boy, I amused myself one day with flying a paper kite; and approaching the bank of a pond, which was nearly a mile broad, I tied the string to a stake, and the kite ascended to a very considerable height above the pond, while I was swimming. In a little time, being desirous of amusing myself with my kite, and enjoying at the same time the pleasure of swimming, I returned, and loosing from the stake the string with the little stick which was fastened to it, went again into the water, where I found, that lying on my back, and holding the stick in my hands, I was drawn along the surface of the water in a very agreeable manner. Having then engaged another boy to carry my clothes round the pond, to a place which I pointed out to him, on the other side, I began to cross the pond with my kite, which carried me quite over without the least fatigue, and with the greatest pleasure imaginable. I was only obliged occasionally to halt a little in my course, and resist its progress, when it appeared that, by following too quick, I lowered the kite too much; by doing which occasionally, I made it rise again. I have never since that time practised this singular mode of swimming, though I think it not impossible to cross in this manner from Dover to Calais. The packet boat, however, is still preferable.

NEW MODE OF BATHING.

EXTRACTS OF LETTERS TO M. DUBOURG.

“LONDON, JULY 28, 1768.

“I GREATLY approve the epithets which you give in your letter of the 8th of June, to the new method of treating the small-pox, which you call the *tonic* or bracing method; I will take occasion from it, to mention a practice to which I have accustomed myself. You know the cold bath has long been in vogue here as a tonic; but the shock of the cold water has always appeared to me, generally speaking, as too violent, and I have found it much more agreeable to my constitution to bathe in another element — I mean cold air. With this view, I rise early almost every morning, and sit in my chamber without any clothes whatever, half an hour or an hour, according to the season, either reading or writing. This practice is not in the least painful, but, on the contrary, agreeable; and if I return to bed afterwards, before I dress myself, as it sometimes happens, I make a supplement to my night's rest of one or two hours of the most pleasing sleep that can be imagined. I find no ill consequences whatever resulting from it, and that at least it does not injure my health, if it does not in fact contribute to its preservation. I shall therefore call it for the future a *bracing* or *tonic* bath.”

“MARCH 10, 1773.

“I shall not attempt to explain why damp clothes occasion colds, rather than wet ones, because I doubt the fact; I imagine that neither the one nor the other contribute to this effect, and that the causes of colds are totally independent of wet, and even of cold. I propose writing a short paper on this subject, the first moment of leisure I have at my disposal. In the

mean time, I can only say, that having some suspicions that the common notion, which attributes to cold the property of stopping the pores and obstructing perspiration, was ill founded, I engaged a young physician, who is making some experiments with Sanctorius's balance, to estimate the different proportions of his perspiration, when remaining one hour quite naked, and another warmly clothed. He pursued the experiment in this alternate manner for eight hours successively, and found his perspiration almost double during those hours in which he was naked.

TO M. DUBOURG.

OBSERVATIONS ON THE GENERALLY PREVAILING DOCTRINES OF LIFE AND DEATH.

Your observations on the causes of death, and the experiments which you propose for recalling to life those who appear to be killed by lightning, demonstrate equally your sagacity and humanity. It appears that the doctrine of life and death, in general, are yet but little understood.

A toad buried in the sand will live, it is said, until the sand becomes petrified; and then, being enclosed in the stone, it may live for we know not how many ages. The facts which are cited in support of this opinion, are too numerous and too circumstantial, not to deserve a certain degree of credit. As we are accustomed to see all the animals with which we are acquainted eat and drink, it appears to us difficult to conceive, how a toad can be supported in such a dungeon. But if we reflect that the necessity of nourishment, which animals experience in their ordinary state, proceeds from the continual waste of their substance by perspiration, it will appear less incredible,

that some animals, in a torpid state, perspiring less because they use no exercise, should have less need of aliment; and that others, which are covered with scales or shells, which stop perspiration, such as land and sea turtles, serpents, and some species of fish, should be able to subsist a considerable time without any nourishment whatever. A plant, with its flowers, fades and dies immediately, if exposed to the air without having its roots immersed in a humid soil, from which it may draw a sufficient quantity of moisture to supply that which exhales from its substance, and is carried off continually by the air. Perhaps, however, if it were buried in quicksilver, it might preserve, for a considerable space of time, its vegetable life, its smell and color. If this be the case, it might prove a commodious method of transporting from distant countries those delicate plants which are unable to sustain the inclemency of the weather at sea, and which require particular care and attention.

I have seen an instance of common flies preserved in a manner somewhat similar. They had been drowned in Madeira wine, apparently about the time it was bottled in Virginia, to be sent to London. At the opening of one of the bottles, at the house of a friend where I was, three drowned flies fell into the first glass that was filled. Having heard it remarked that drowned flies were capable of being revived by the rays of the sun, I proposed making the experiment upon these. They were, therefore, exposed to the sun, upon a sieve which had been employed to strain them out of the wine. In less than three hours, two of them by degrees began to recover life. They commenced by some convulsive motions of the thighs, and at length they raised themselves upon their legs, wiped their eyes with their fore feet, beat and brushed their wings with their hind feet, and soon after began to fly, finding themselves in Old England, without knowing how they came thither. The third continued lifeless until sunset, when, losing all hopes of him, he was thrown away.

I wish it were possible, from this instance, to invent a method of embalming drowned persons in such a manner that they may be recalled to life at any period, however distant, for, having a very ardent desire to see and observe the state of America a hundred years hence, I should prefer to an ordinary death, the being immersed in a cask of Madeira wine, with a few friends, until that time, then to be recalled to life by the solar warmth of my dear country! But since, in all probability, we live in an age too early, and too near the infancy of science, to see such an art brought in our time to its perfection, I must, for the present, content myself with the treat which you are so kind as to promise me, of the resurrection of a fowl or turkey cock.

PRECAUTIONS

TO BE USED BY THOSE WHO ARE ABOUT TO UNDERTAKE
A SEA VOYAGE.

WHEN you intend to take a long voyage, nothing is better than to keep it a secret till the moment of your departure. Without this, you will be continually interrupted and tormented, by visits from friends and acquaintances, who not only make you lose your valuable time, but make you forget a thousand things which you wish to remember; so that when you are embarked and fairly at sea, you recollect with much uneasiness, affairs which you have not terminated, accounts that you have not settled, and a number of things which you proposed to carry with you, and which you find the want of every moment. Would it not be attended with the best consequences, to reform such a custom, and to suffer a traveler, without deranging him, to make his preparations in quietness, to set apart a few days, when these are finished, to take leave of his friends, and to receive their good wishes for his happy return.

It is not always in one's power to choose a captain; though great part of the pleasure and happiness of the passage depends on this choice; and though one must for a time be confined to his company, and be in some measure under his command, if he is a social, sensible man, obliging, and of a good disposition, you will be so much the happier. One sometimes meets with people of this description, but they are not common; however, if yours be not of this number, if he be a good seaman, attentive, careful, and active in the management of his vessel, you may dispense with the rest, for these are the most essential qualities.

Whatever right you may have, by your agreement with him, to the provisions he has taken on board for the use of the passengers, it is always proper to have some private store, which you may make use of occasionally. You ought, therefore, to provide good water, that of the ship being often bad; but you must put it into bottles, without which you cannot expect to preserve it sweet. You ought also to carry with you good tea, ground coffee, chocolate, wine of that sort which you like best, cider, dried raisins, almonds, sugar, capillaire, citrons, rum, eggs dipped in oil, portable soup, bread twice baked. With regard to poultry, it is almost useless to carry any with you, unless you resolve to undertake the office of feeding and fattening them yourself. With the little care which is taken of them on board a ship, they are almost all sickly, and their flesh is as tough as leather.

All sailors entertain an opinion, which undoubtedly originated formerly from a want of water, and when it has been found necessary to be sparing of it, that poultry never know when they have drank enough, and that when water is given them at discretion, they generally kill themselves by drinking beyond measure. In consequence of this opinion, they give them water only once in two days, and even then in small quantities; but as they pour this water into troughs inclining on one side, which occasions it to run to the lower part, it thence happens that they are obliged to mount

one upon the back of another in order to reach it; and there are some which cannot even dip their beaks in it. Thus continually tantalized and tormented by thirst, they are unable to digest their food, which is very dry, and they soon fall sick and die. Some of them are found thus every morning, and are thrown into the sea; while those which are killed for the table, are scarcely fit to be eaten. To remedy this inconvenience, it will be necessary to divide their troughs into small compartments, in such a manner that each of them may be capable of containing water; but this is seldom or never done. On this account, sheep and hogs are to be considered as the best fresh provisions that one can have at sea; mutton there being in general very good, and pork excellent.

It may happen that some of the provisions and stores which I have recommended, may become almost useless, by the care which the captain has taken to lay in a proper stock; but in such a case you may dispose of it to relieve the poor passengers, who, paying less for their passage, are stowed among the common sailors, and have no right to the captain's provisions, except such part of them as is used for feeding the crew. These passengers are sometimes sick, melancholy, and dejected; and there are often women and children among them, neither of whom have any opportunity of procuring those things which I have mentioned, and of which, perhaps, they have the greatest need. By distributing amongst them a part of your superfluity, you may be of the greatest assistance to them. You may restore their health, save their lives, and in short render them happy; which always affords the liveliest sensation to a feeling mind.

The most disagreeable thing at sea is the cookery; for there is not, properly speaking, any professed cook on board. The worst sailor is generally chosen for that purpose, who for the most part is equally dirty. Hence comes the proverb used among the English sailors, that "God sends meat, and the devil sends cooks." Those, however, who have a better opinion

of Providence, will think otherwise. Knowing that sea air, and the exercise or motion which they receive from the rolling of the ship, have a wonderful effect in whetting the appetite, they will say, that Providence has given sailors bad cooks to prevent them from eating too much; or that, knowing they would have bad cooks, he has given them a good appetite to prevent them from dying with hunger. However, if you have no confidence in these succors of Providence, you may yourself, with a lamp and a boiler, by the help of a little spirits of wine, prepare some food, such as soup, hash, &c. A small oven, made of tin-plate is not a bad piece of furniture: your servant may roast in it a piece of mutton or pork. If you are ever tempted to eat salt beef, which is often very good, you will find that cider is the best liquor to quench the thirst generally caused by salt meat or salt fish. Sea biscuit, which is too hard for the teeth of some people, may be softened by steeping it; but bread double baked is the best; for being made of good loaf bread cut into slices, and baked a second time, it readily imbibes water, becomes soft, and is easily digested; it consequently forms excellent nourishment, much superior to that of biscuit, which has not been fermented.

I must here observe, that this double baked bread was originally the real biscuit prepared to keep at sea; for the word *biscuit*, in French, signifies twice baked.* Peas often boil badly, and do not become soft; in such a case, by putting a two pound shot into the kettle, the rolling of the vessel, by means of this bullet, will convert the peas into a kind of porridge, like mustard.

Having often seen soup, when put upon the table at sea in broad flat dishes, thrown out on every side by the rolling of the vessel, I have wished that our tinmen would make our soup basins with divisions or compartments; forming small plates, proper for containing soup for one person only. By this disposition,

* It is derived from *bis* again, and *cuit* baked.

the soup in an extraordinary roll, would not be thrown out of the plate, and would not fall into the breasts of those who are at table, and scald them. Having entertained you with these things of little importance, permit me now to conclude with some general reflections upon navigation.

When navigation is employed only for transporting necessary provisions from one country, where they abound, to another where they are wanting; when by this it prevents famines, which were so frequent and so fatal before it was invented and became so common; we cannot help considering it as one of those arts which contribute most to the happiness of mankind. But when it is employed to transport things of no utility, or articles of luxury, it is then uncertain whether the advantages resulting from it are sufficient to counterbalance the misfortunes it occasions by exposing the lives of so many individuals upon the vast ocean. And when it is used to plunder vessels and transport slaves, it is evidently only the dreadful means of increasing those calamities which afflict human nature.

One is astonished to think on the number of vessels and men who are daily exposed in going to bring tea from China, coffee from Arabia, and sugar and tobacco from America; all commodities which our ancestors lived very well without. The sugar trade employs nearly a thousand vessels and that of tobacco almost the same number. With regard to the utility of tobacco, little can be said; and, with regard to sugar, how much more meritorious would it be to sacrifice the momentary pleasure which we receive from drinking it once or twice a day in our tea, than to encourage the numberless cruelties that are continually exercised in order to procure it for us?

A celebrated French moralist said, that, when he considered the wars which we foment in Africa to get negroes; the great number who of course perish in these wars; the multitude of those wretches who die in their passage, by disease, bad air, and bad provisions;

and lastly, how many perish by the cruel treatment they meet with in a state of slavery; when he saw a bit of sugar, he could not help imagining it to be covered with spots of human blood. But, had he added to these considerations the wars which we carry on against one another, to take and retake the islands that produce this commodity, he would not have seen the sugar simply spotted with blood, he would have beheld it entirely tinged with it.

These wars make the maritime powers of Europe, and the inhabitants of Paris and London, pay much dearer for their sugar than those of Vienna, though they are almost three hundred leagues distant from the sea. A pound of sugar, indeed, costs the former not only the price which they give for it, but also what they pay in taxes, necessary to support the fleets and armies which serve to defend and protect the countries that produce it.

ON LUXURY, IDLENESS, AND INDUSTRY.

From a letter to BENJAMIN VAUGHAN, Esq. Member of Parliament for the Borough of Calne, in Wiltshire, between whom and our author there subsisted a very close friendship — written in 1784.

It is wonderful how preposterously the affairs of this world are managed. Naturally one would imagine, that the interest of a few individuals should give way to general interest: but individuals manage their affairs with so much more application, industry, and address, than the public do theirs, that general interest most commonly gives way to particular. We assemble parliaments and councils, to have the benefit of their collected wisdom; but we necessarily have, at the same time, the inconvenience of their collected passions, prejudices, and private interest. By the help of these,

artful men overpower their wisdom, and dupe its possessors; and if we may judge by the acts, arrêts, and edicts, all the world over, for regulating commerce, an assembly of great men is the greatest fool on earth.

I have not yet, indeed, thought of a remedy, for luxury. I am not sure that, in a great state, it is capable of a remedy; nor that the evil is in itself always so great as is represented. Suppose we include in the definition of luxury all unnecessary expense, and then let us consider whether laws to prevent such expense are possible to be executed in a great country, and whether, if they could be executed, our people generally would be happier, or even richer. Is not the hope of being one day able to purchase and enjoy luxuries, a great spur to labor and industry? May not luxury therefore, produce more than it consumes, if, without such a spur, people would be, as they are naturally enough inclined to be, lazy and indolent? To this purpose I remember a circumstance. The skipper of a shallop, employed between Cape May and Philadelphia had done us some small service, for which he refused to be paid. My wife understanding that he had a daughter, sent her a present of a new-fashioned cap. Three years after, this skipper being at my house with an old farmer of Cape May, his passenger, he mentioned the cap, and how much his daughter had been pleased with it. "But (said he) it proved a dear cap to our congregation."—"How so?"—"When my daughter appeared with it at meeting, it was so much admired, that all the girls resolved to get such caps from Philadelphia; and my wife and I computed that the whole could not have cost less than a hundred pounds."—"True, (said the farmer) but you do not tell all the story. I think the cap was nevertheless an advantage to us; for it was the first thing that put our girls upon knitting worsted mittens for sale at Philadelphia, that they might have wherewith to buy caps and ribbons there; and you know that that industry has continued, and is likely to continue and increase to a much greater value, and answer better purposes."—Upon the whole,

I was more reconciled to this little piece of luxury, since not only the girls were made happier by having fine caps, but the Philadelphians by the supply of warm mittens.

In our commercial towns upon the seacoast, fortunes will occasionally be made. Some of those who grow rich will be prudent, live within bounds, and preserve what they have gained, for their posterity; others, fond of showing their wealth, will be extravagant, and ruin themselves. Laws cannot prevent this; and perhaps it is not always an evil to the public. A shilling spent idly by a fool, may be picked up by a wiser person, who knows better what to do with it. It is therefore not lost. A vain, silly fellow builds a fine house, furnishes it richly, lives in it expensively, and in a few years ruins himself; but the masons, carpenters, smiths and other honest tradesman have been, by his employ, assisted in maintaining and raising their families; the farmer has been paid for his labor, and encouraged, and the estate is now in better hands. In some cases, indeed, certain modes of luxury may be a public evil, in the same manner as it is a private one. If there be a nation for instance, that exports its beef and linen, to pay for the importation of claret and porter, while a great part of its people live upon potatoes, and wear no shirts—wherein does it differ from the sot, who lets his family starve, and sells his clothes to buy drink? Our American commerce is, I confess, a little in this way. We sell our victuals to the islands, for rum and sugar; the substantial necessaries of life for superfluities. But we have plenty, and live well nevertheless; though, by being soberer, we might be richer.

The vast quantity of forest land we have yet to clear and put in order for cultivation, will for a long time keep the body of our nation laborious and frugal. Forming an opinion of our people, and their manners, by what is seen among the inhabitants of the seaports, is judging from an improper sample. The people of the trading towns may be rich and luxurious, while the country possesses all the virtues that tend to promote

happiness and public prosperity. Those towns are not much regarded by the country; they are hardly considered as an essential part of the states; and the experience of the last war has shown, that their being in the possession of the enemy, did not necessarily draw on the subjection of the country; which bravely continued to maintain its freedom and independence notwithstanding.

It has been computed by some political arithmetician, that if every man and woman would work for four hours each day on something useful, that labor would produce sufficient to procure all the necessaries and comforts of life: want and misery would be banished out of the world, and the rest of the twenty-four hours might be leisure and pleasure.

What occasions, then, so much want and misery? It is the employment of men and women in works that produce neither the necessaries nor conveniences of life; who, with those who do nothing, consume necessaries raised by the laborious. To explain this:

The first elements of wealth are obtained, by labor, from the earth and waters. I have land, and raise corn. With this, if I feed a family that does nothing, my corn will be consumed, and at the end of the year I shall be no richer than I was at the beginning. But if, while I feed them, I employ them, some in spinning, others in making bricks, &c. for building, the value of my corn will be arrested and remain with me, and at the end of the year we all may be better clothed and better lodged. And if, instead of employing a man I feed in making bricks, I employ him in fiddling for me, the corn he eats is gone, and no part of his manufacture remains to augment the wealth and convenience of the family; I shall, therefore, be the poorer for this fiddling man, unless the rest of my family work more, or eat less, to make up the deficiency he occasions.

Look round the world and see the millions employed in doing nothing, or something that amounts to nothing, when the necessaries and conveniences of life are

in question. What is the bulk of commerce, for which we fight and destroy each other, but the toil of millions for superfluities, to the great hazard and loss of many lives, by the constant danger of the sea? How much labor is spent in building and fitting great ships, to go to China and Arabia for tea and coffee, to the West Indies for sugar, to America for tobacco? These things cannot be called the necessaries of life, for our ancestors lived very comfortably without them.

A question may be asked — Could all these people now employed in raising, making, or carrying superfluities, be subsisted by raising necessaries? I think they might. The world is large, and a great part of it still uncultivated. Many hundred millions of acres in Asia, Africa, and America, are still in a forest; and a great deal even in Europe. On a hundred acres of this forest, a man might become a substantial farmer; and a hundred thousand men employed in clearing each his hundred acres, would hardly brighten a spot large enough to be visible from the moon, unless with Herschel's telescope; so vast are the regions still in wood.

It is, however, some comfort to reflect that, upon the whole, the quantity of industry and prudence among mankind exceeds the quantity of idleness and folly. Hence the increase of good buildings, farms cultivated, and populous cities filled with wealth, all over Europe, which a few ages since were only to be found on the coast of the Mediterranean; and this, notwithstanding the mad wars continually raging, by which are often destroyed, in one year, the works of many years' peace. So that we may hope, the luxury of a few merchants on the coast will not be the ruin of America.

One reflection more, and I will end this long, rambling letter. Almost all the parts of our bodies require some expense. The feet demand shoes; the legs stockings; the rest of the body clothing; and the belly a good deal of victuals. Our eyes, though exceedingly useful, ask, when reasonable, only the cheap assistance of spectacles, which could not much impair our finances.

But the eyes of other people are the eyes that ruin us. If all but myself were blind, I should want neither fine clothes, fine houses, nor fine furniture.

ON THE SLAVE TRADE.

READING in the newspapers, the speech of Mr. Jackson, in congress, against meddling with the affairs of slavery, or attempting to mend the condition of slaves, it put me in mind of a similar speech, made about one hundred years since, by Sidi Mahomet Ibrahim, a member of the divan of Algiers, which may be seen in Martin's account of his consulship, 1687. It was against granting the petition of the sect called Erika, or Purists, who pray for the abolition of piracy and slavery, as being unjust — Mr. Jackson does not quote it; perhaps he has not seen it. If, therefore, some of its reasonings are to be found in his eloquent speech, it may only show that men's interests operate, and are operated on, with surprising similarity, in all countries and climates, whenever they are under similar circumstances. The African speech, as translated, is as follows:

“Alla Bismillah, &c. God is great, and Mahomet is his prophet.

“Have these Erika considered the consequences of granting their petition? If we cease our cruises against the Christians, how shall we be furnished with the commodities their countries produce, and which are so necessary for us? If we forbear to make slaves of their people, who, in this hot climate, are to cultivate our lands? Who are to perform the common labors of our city, and of our families? Must we not then be our own slaves? And is there not more compassion and more favor due to us Musselmen than to

those Christian dogs? We have now above fifty thousand slaves in and near Algiers. This number, if not kept up by fresh supplies, will soon diminish, and be gradually annihilated. If, then, we cease taking and plundering the infidels' ships, and making slaves of the seamen and passengers, our lands will become of no value, for want of cultivation; the rents of houses in the city will sink one half; and the revenues of government, arising from the share of prizes, must be totally destroyed. And for what? To gratify the whim of a whimsical sect, who would have us not only forbear making more slaves, but even manumit those we have. But who is to indemnify their masters for the loss? Will the state do it? Is our treasury sufficient? Will the Erika do it? Can they do it? Or would they, to do what they think justice to the slaves, do a greater injustice to the owners? And if we set our slaves free, what is to be done with them? Few of them will return to their native countries: they know too well the greater hardships they must there be subject to. They will not embrace our holy religion: they will not adopt our manners: our people will not pollute themselves by intermarrying with them. Must we maintain them as beggars in our streets; or suffer our properties to be the prey of their pillage? for men accustomed to slavery will not work for a livelihood when not compelled. And what is there so pitiable in their present condition? Were they not slaves in their own countries? Are not Spain, Portugal, France, and the Italian states, governed by despots, who hold all their subjects in slavery, without exception? Even England treats her sailors as slaves, for they are, whenever the government pleases, seized and confined in ships of war, condemned not only to work, but to fight for small wages, or a mere subsistence, not better than our slaves are allowed by us. Is their condition, then, made worse by their falling into our hands? No; they have only exchanged one slavery for another, and I may say a better: for here they are brought into a land where the sun of Islamism

gives forth its light, and shines in full splendor, and they have an opportunity of making themselves acquainted with the true doctrine, and thereby save their immortal souls. Those who remain at home, have not that happiness. Sending the slaves home, then, would be sending them out of light into darkness.

“I repeat the question, what is to be done with them? I have heard it suggested, that they may be planted in the wilderness, where there is plenty of land for them to subsist on, and where they may flourish as a free state. But they are, I doubt, too little disposed to labor without compulsion, as well as too ignorant to establish good government; and the wild Arabs would soon molest and destroy, or again enslave them. While serving us, we take care to provide them with every thing; and they are treated with humanity. The laborers in their own countries are, as I am informed, worse fed, lodged, and clothed. The condition of most of them is, therefore, already mended, and requires no further improvement. Here their lives are in safety. They are not liable to be impressed for soldiers, and forced to cut one another's christian throats, as in the wars of their own countries. If some of the religious, mad bigots, who now tease us with their silly petitions, have, in a fit of blind zeal, freed their slaves, it was not generosity, it was not humanity that moved them to the action; it was from the conscious burden of a load of sins, and hope, from the supposed merits of so good a work, to be excused from damnation. How grossly are they mistaken, in imagining slavery to be disavowed by the Alcoran! Are not the two precepts, to quote no more, ‘Masters, treat your slaves with kindness — Slaves, serve your masters with cheerfulness and fidelity,’ clear proofs to the contrary? Nor can the plundering of infidels be, in that sacred book, forbidden; since it is well known from it, that God has given the world, and all that it contains, to his faithful Musselmen, who are to enjoy it, of right, as fast as they conquer it. Let us, then, hear no more of this detestable proposition, the manumission

of christian slaves, the adoption of which would, by depreciating our lands and houses, and thereby depriving so many good citizens of their properties, create universal discontent, and provoke insurrections, to the endangering of government, and producing general confusion. I have, therefore, no doubt that this wise council will prefer the comfort and happiness of a whole nation of true believers to the whims of a few Erika, and dismiss their petition."

The result was, as Martin tells us, that the divan came to this resolution, "That the doctrine, that the plundering and enslaving the christians is unjust, is at best problematical; but that it is the interest of this state to continue the practice, is clear; therefore, let the petition be rejected." And it was rejected accordingly.

And since like motives are apt to produce, in the minds of men, like opinions and resolutions, may we not venture to predict, from this account, that the petitions to the parliament of England for abolishing the slave trade, to say nothing of other legislatures, and the debates upon them, will have a similar conclusion.

HISTORICUS.

MARCH 23, 1790.

OBSERVATIONS ON WAR.

By the original laws of nations, war and extirpation were the punishment of injury. Humanizing, by degrees, it admitted slavery instead of death; a farther step was, the exchange of prisoners instead of slavery; another, to respect more the property of private persons under conquest, and be content with acquired dominion. Why should not this law of nations go on improving? Ages have intervencd between its several

steps; but as knowledge of late increases rapidly, why should not those steps be quickened? Why should it not be agreed to, as the future law of nations, that in any war hereafter, the following description of men should be undisturbed, have the protection of both sides, and be permitted to follow their employments in security, viz.

1. Cultivators of the earth, because they labor for the subsistence of mankind.

2. Fishermen, for the same reason.

3. Merchants and traders in unarmed ships, who accommodate different nations by communicating and exchanging the necessaries and conveniences of life.

4. Artists and mechanics, inhabiting and working in open towns.

It is hardly necessary to add, that the hospitals of enemies should be unmolested—they ought to be assisted. It is for the interest of humanity in general, that the occasions of war, and the inducements to it, should be diminished. If rapine be abolished, one of the encouragements to war is taken away, and peace therefore more likely to continue and be lasting.

The practice of robbing merchants on the high seas, —a remnant of the ancient piracy—though it may be accidentally beneficial to particular persons, is far from being profitable to all engaged in it, or to the nation that authorizes it. In the beginning of a war some rich ships are surprised and taken. This encourages the first adventurers to fit out more armed vessels; and many others to do the same. But the enemy at the same time become more careful, arm their merchant ships better, and, to render them not so easy to be taken, they go also, more under the protection of convoys. Thus, while the privateers to take them are multiplied, the vessels subjected to be taken, and the chances of profit are diminished; so that many cruises are made, wherein the expenses overgo the gains; and, as is the case in other lotteries, though particulars have got prizes, the mass of adventurers are losers, the whole expense of fitting out all the privateers

during a war, being much greater than the whole amount of goods taken.

Then there is the national loss of all the labor of so many men during the time they have been employed in robbing; who, besides, spend what they get in riot, drunkenness, and debauchery; lose their habits of industry; are rarely fit for any sober business after a peace, and serve only to increase the number of highwaymen and housebreakers. Even the undertakers, who have been fortunate, are by sudden wealth led into expensive living, the habit of which continues when the means of supporting it cease, and finally ruins them; a just punishment for their having wantonly and unfeelingly ruined many honest, innocent traders and their families, whose substance was employed in serving the common interest of mankind.

ON THE IMPRESS OF SEAMEN.

Notes copied from DR. FRANKLIN'S writing in pencil in the margin of JUDGE FOSTER'S celebrated "Argument in Favor of the Impressing of Seamen," published in the folio edition of his works.

JUDGE FOSTER, p. 158, "Every man."—The conclusion here, from the *whole to a part*, does not seem to be good logic. If the alphabet should say, let us all fight for the defense of the whole; that is equal, and may therefore be just. But if they should say, Let A, B, C, and D go out and fight for us, while we stay at home and sleep in whole skins; that is not equal, and therefore cannot be just.

Ib. "Employ,"—if you please. The word signifies engaging a man to work for me, by offering him such wages as are sufficient to induce him to prefer my service. This is very different from compelling him to work on such terms as I think proper.

Ib. "This service and employment," &c. These are false facts. His employment and service are not the same. Under the merchant he goes in an unarmed vessel, not obliged to fight, but to transport merchandise. In the king's service he is obliged to fight, and to hazard all the dangers of battle. Sickness on board of king's ships is also more common and more mortal. The merchant's service, too, he can quit at the end of the voyage; not the king's. Also, the merchant's wages are much higher.

Ib. "I am very sensible," &c.—Here are two things put in comparison that are not comparable: viz. injury to seamen, and inconvenience to trade. Inconvenience to the whole trade of a nation will not justify injustice to a single seaman. If the trade would suffer without his service, it is able, and ought to be willing to offer him such wages as may induce him to afford his service voluntarily.

Page 159. "Private mischief must be borne with patience for preventing a national calamity." Where is this maxim in law and good policy to be found? And how can that be a maxim which is not consistent with common sense? If the maxim had been, that private mischiefs, which prevent a national calamity, ought to be generously compensated by the nation, one might understand it: but that private mischiefs are only to be borne with patience, is absurd!

Ib. "The expedient," &c.—"And," &c. (paragraphs 2 and 3.)—Twenty ineffectual or inconvenient schemes will not justify one that is unjust.

Ib. "Upon the foot of." &c.—Your reasoning indeed, like a lie, stands but upon one *foot*; truth upon two.

Page 160. "Full wages."—Probably the same they had in the merchant's service.

Page 174. "I hardly admit," &c.—(paragraph 5.) When this author speaks of impressing, page 158, he diminishes the horror of the practice as much as possible, by representing to the mind one sailor only suffering a "*hardship*," (as he tenderly calls it) in some "*particular cases*" only; and he places against this private

mischief the inconvenience to the trade of the kingdom.—But if, as he supposes is often the case, the sailor who is pressed and obliged to serve for the defense of trade, at the rate of twenty-five shillings a month, could get three pounds fifteen shillings in the merchant's service, you take from him fifty shillings a month; and if you have 100,000 in your service, you rob this honest industrious part of society and their poor families of £250,000 per month, or three millions a year, and at the same time oblige them to hazard their lives in fighting for the defense of your trade; to the defense of which all ought indeed to contribute (and sailors among the rest,) in proportion to their profits by it; but this three millions is more than their share, if they do not pay with their persons; but when you force that, methinks that you should excuse the other.

But, it may be said, to give to the king's seamen merchants' wages, would cost the nation too much, and call for more taxes. The question then will amount to this: whether it be just in a community, that the richer part should compel the poorer to fight in defense of them and their properties, for such wages as they think fit to allow, and punish them if they refuse? Our author tells us that it is "*legal*." I have not law enough to dispute his authorities, but I cannot persuade myself that it is equitable. I will, however, own for the present, that it may be lawful when necessary; but then I contend that it may be used so as to produce the same good effect—the *public security*—without doing so much intolerable injustice as attends the impressing common seaman. In order to be better understood, I would premise two things: First, that voluntary seamen may be had for the service, if they were sufficiently paid. The proof is, that to serve in the same ship, and incur the same dangers, you have no occasion to impress captains, lieutenants, second lieutenants, midshipmen, pursers, nor many other officers. Why, but that the profits of their places, or the emoluments expected, are sufficient inducements?—The business then is, to find money, by impressing,

sufficient to make the sailors all volunteers, as well as their officers ; and this without any fresh burden upon trade.—The second of my premises is, that twenty-five shillings a month, with his share of the salt beef, pork, and peas-pudding, being found sufficient for the subsistence of a hard-working seaman, it will certainly be so for a sedentary scholar or gentleman. I would then propose to form a treasury, out of which encouragements to seamen should be paid. To fill this treasury, I would impress a number of civil officers who at present have great salaries, oblige them to serve in their respective offices for twenty-five shillings a month with their shares of mess provisions, and throw the rest of their salaries into the seamen's treasury. If such a press-warrant were given me to execute, the first I would press should be a recorder of Bristol, or a Mr. Justice Foster, because I might have need of his edifying example, to show how much impressing ought to be borne with ; for he would certainly find, that though to be reduced to twenty-five shillings a month might be a "private mischief," yet that, agreeably to his maxim of law and good policy, it "ought to be borne with patience," for preventing a national calamity. Then I would press the rest of the judges ; and, opening the red book, I would press every civil officer of government, from £50 a year salary, up to 50,000, which would throw an immense sum into our treasury ; and these gentlemen could not complain, since they would receive twenty-five shillings a month, and their rations ; and this without being obliged to fight.—Lastly, I think I would impress * * *

ON CRIMINAL LAWS,
AND THE PRACTICE OF PRIVATEERING.

LETTER TO BENJAMIN VAUGHN, ESQ.

MARCH 14, 1785.

MY DEAR FRIEND :

Among the pamphlets you lately sent me was one, entitled, *Thoughts on Executive Justice*. In return for that, I send you a French one on the same subject, *Observations concernant l'Execution de l'Article II de la Declaration sur le Vol*. They are both addressed to the judges, but written, as you will see, in a very different spirit. The English author is for hanging *all* thieves. The Frenchman is for proportioning punishments to offenses.

If we really believe, as we profess to believe, that the law of Moses was the law of God, the dictate of Divine wisdom, infinitely superior to human, on what principles do we ordain death as the punishment of an offense which, according to that law, was only to be punished by a restitution of fourfold? To put a man to death for an offense which does not deserve death, is it not a murder? And, as the French writer says, "Doit on punir un délit contre la société par un crime contre la nature?"

Superfluous property is the creature of society. Simple and mild laws were sufficient to guard the property that was merely necessary. The savage's bow, his hatchet, and his coat of skins, were sufficiently secured without law, by the fear of personal resentment and retaliation. When, by virtue of the first laws, part of the society accumulated wealth and grew powerful, they enacted others more severe, and would protect their property at the expense of humanity. This was abusing their power, and commencing a tyranny. If a savage, before he entered into society, had been told, "Your neighbor, by this means may become owner of a hundred deer; but if your brother, or your son, or

yourself, having no deer of your own, and being hungry, should kill one, an infamous death must be the consequence," he would probably have preferred his liberty, and his common right of killing any deer, to all the advantages of society that might be proposed to him.

That it is better a hundred guilty persons should escape, than that one innocent person should suffer, is a maxim that has been long and generally approved; never, that I know of, controverted. Even the sanguinary author of the *Thoughts* agrees to it, adding well, that the very thought of *injured* innocence, and much more that of *suffering* innocence, must awaken all our tenderest and most compassionate feelings, and at the same time raise our highest indignation against the instruments of it. But he adds, "there is no danger of *either*, from a strict adherence to the laws." Really!—is it, then, impossible to make an unjust law; and if the law itself be unjust, may it not be the very "instrument which ought to raise the author's and everybody's highest indignation?" I see in the last newspapers from London, that a woman is capitally convicted at the Old Bailey, for privately stealing out of a shop some gauze, value fourteen shillings and three pence. Is there any proportion between the injury done by a theft, value fourteen shillings and three pence, and the punishment of a human creature by death, on a gibbet? Might not that woman, by her labor, have made the reparation ordained by God in paying fourfold? Is not all punishment inflicted beyond the merit of the offense, so much punishment of innocence? In this light, how vast is the annual quantity, of not only injured but suffering innocence, in almost all the civilized states of Europe!

But it seems to have been thought, that this kind of innocence may be punished by way of preventing crimes. I have read, indeed, of a cruel Turk in Barbary, who, whenever he bought a new Christian slave, ordered him immediately to be hung up by the legs, and to receive a hundred blows of a cudgel on the

soles of his feet, that the severe sense of the punishment, and fear of incurring it hereafter, might prevent the faults that should merit it. Our author himself would hardly approve entirely of this Turk's conduct in the government of slaves; and yet he appears to recommend something like it for the government of English subjects, when he applauds the reply of Judge Burnet to the convict horse-stealer; who, being asked what he had to say why judgment of death should not pass against him, and answering, that it was hard to hang a man for only stealing a horse, was told by the judge, "Man, thou art not to be hanged only for stealing a horse, but that horses may not be stolen." The man's answer, if candidly examined, will, I imagine, appear reasonable, as being founded on the eternal principle of justice and equity, that punishments should be proportioned to offenses; and the judge's reply brutal and unreasonable, though the writer "wishes all judges to carry it with them whenever they go the circuit, and to bear it in their minds as containing a wise reason for all the penal statutes which they are called upon to put in execution. It at once illustrates," says he, "the true grounds and reasons of all capital punishments whatsoever, namely, that every man's property, as well as his life, may be held sacred and inviolate." Is there, then, no difference in value between property and life? If I think it right that the crime of murder should be punished with death, not only as an equal punishment of the crime, but to prevent other murders, does it follow that I must approve of inflicting the same punishment for a little invasion on my property by theft? If I am not myself so barbarous, so bloody minded, and revengeful, as to kill a fellow creature for stealing from me fourteen shillings and threepence, how can I approve of a law that does it? Montesquieu, who was himself a judge, endeavors to impress other maxims. He must have known what humane judges feel on such occasions, and what the effects of those feelings and, so far from thinking that severe and excessive

punishments prevent crimes, he asserts, as quoted by our French writer, that —

“L'atrocité des loix en empêche l'execution.

“Lorsque la peine est sans mesure, on est souvent obligé de lui préférer l'impunité.

“La cause de tous les relachemens vient de l'impunité des crimes et non de la moderation des peines.”

It is said by those who know Europe generally, that there are more thefts committed and punished annually in England, than in all the other nations put together. If this be so, there must be a cause or causes for such a depravity in our common people. May not one be the deficiency of justice and morality in our national government, manifested in our oppressive conduct to subjects, and unjust wars on our neighbors? View the long-persisted in, unjust, monopolizing treatment of Ireland, at length acknowledged! View the plundering government exercised by our merchants in the Indies; the confiscating war made upon the American colonies; and, to say nothing of those upon France and Spain, view the late war upon Holland, which was seen by impartial Europe in no other light than that of a war of rapine and pillage; the hopes of an immense and easy prey being its only apparent, and probably its true and real motive and encouragement. Justice is as strictly due between neighbor nations, as between neighbor citizens. A highwayman is as much a robber when he plunders in a gang, as when single; and a nation that makes an unjust war is only a great gang. After employing your people in robbing the Dutch, is it strange that, being put out of that employ by peace, they still continue robbing, and rob one another? *Piraterte*, as the French call it, or privateering, is the universal bent of the English nation, at home and abroad, wherever settled. No less than seven hundred privateers were, it is said, commissioned in the last war! These were fitted out by merchants, to prey upon other merchants, who had never done them any injury. Is there probably any one of

those privateering merchants of London, who were so ready to rob the merchants of Amsterdam, that would not as readily plunder another London merchant, of the next street, if he could do it with the same impunity? The avidity, the *alieni appetens* is the same; it is the fear alone of the gallows that makes the difference. How then can a nation, which, among the honestest of its people, has so many thieves by inclination, and whose government encouraged and commissioned no less than seven hundred gangs of robbers; how can such a nation have the face to condemn the crime in individuals, and hang up twenty of them in a morning! It naturally puts one in mind of a Newgate anecdote. One of the prisoners complained, that in the night somebody had taken his buckles out of his shoes. "What the devil!" says another, "have we then thieves amongst us? It must not be suffered. Let us search out the rogue, and pump him to death."

There is, however, one late instance of an English merchant who will not profit by such ill gotten gain. He was, it seems, part owner of a ship, which the other owners thought fit to employ as a letter of marque, which took a number of French prizes. The booty being shared, he has now an agent here, inquiring, by an advertisement in the Gazette, for those who have suffered the loss, in order to make them, as far as in him lies, restitution. This conscientious man is a quaker. The Scotch Presbyterians were formerly as tender: for there is still extant an ordinance of the town council of Edinburgh, made soon after the reformation, "forbidding the purchase of prize goods, under pain of losing the freedom of the burgh forever, with other punishments at the will of the magistrate; the practice of making prizes being contrary to good conscience, and the rule of treating Christian brethren as we would wish to be treated; and such goods are not to be sold by any godly man within this burgh." The race of these godly men in Scotland, is probably extinct, or their principles abandoned.

since, as far as that nation had a hand in promoting the war against the colonies, prizes and confiscations are believed to have been a considerable motive.

It has been for some time a generally received opinion, that a military man is not to inquire whether a war be just or unjust; he is to execute his orders. All princes, who are disposed to become tyrants, must probably approve of this opinion, and be willing to establish it; but is it not a dangerous one? since, on that principle, if the tyrant commands his army to attack and destroy not only an unoffending neighbor nation, but even his own subjects, the army is bound to obey. A negro slave, in our colonies, being commanded by his master to rob or murder a neighbor, or do any other immoral act, may refuse; and the magistrate will protect him in his refusal. The slavery then of a soldier is worse than that of a negro! A conscientious officer, if not restrained by the apprehension of its being imputed to another cause, may indeed resign, rather than be employed in an unjust war; but the private men are slaves for life; and they are, perhaps, incapable of judging for themselves. We can only lament their fate, and still more that of a sailor, who is often dragged by force from his honest occupation, and compelled to imbrue his hands in perhaps innocent blood. But, methinks, it well behoves merchants (men more enlightened by their education, and perfectly free from any such force or obligation) to consider well of the justice of a war, before they voluntarily engage a gang of ruffians to attack their fellow merchants of a neighboring nation, to plunder them of their property, and perhaps ruin them and their families, if they yield it; or to wound, maim, and murder them, if they endeavor to defend it. Yet these things are done by Christian merchants, whether a war be just or unjust; and it can hardly be just on both sides. They are done by English and American merchants, who, nevertheless, complain of private theft, and hang by the dozens the thieves they have taught by their own example.

It is high time, for the sake of humanity, that a stop were put to this enormity. The United States of America, though better situated than any European nation to make profit by privateering, (most of the trade of Europe with the West Indies, passing before their doors,) are, as far as in them lies, endeavoring to abolish the practice, by offering, in all their treaties with other powers, an article, engaging solemnly, that in case of future war, no privateer shall be commissioned on either side; and that unarmed merchant ships, on both sides, shall pursue their voyages unmolested.* This will be a happy improvement of the law of nations, the humane and the just cannot but wish general success to the proposition.

With unchangeable esteem and affection,
I am, my dear friend, ever yours.

* This offer having been accepted by the late King of Prussia, a treaty of amity and commerce was concluded between that monarch and the United States, containing the following humane, philanthropic article; in the formation of which Dr. Franklin, as one of the American plenipotentiaries, was principally concerned, viz:

Art. 23. If war should arise between the two contracting parties, the merchants of either country, then residing in the other, shall be allowed to remain nine months to collect their debts and settle their affairs, and may depart freely, carrying off all their effects, without molestation or hindrance; and all women and children, scholars of every faculty, cultivators of the earth, artisans, manufacturers, and fishermen, unarmed, and inhabiting unfortified towns, villages, and places, and, in general, all others whose occupations are for the common subsistence and benefit of mankind, shall be allowed to continue their respective employments, and shall not be molested in their persons, nor shall their houses or goods be burnt, or otherwise destroyed, nor their fields wasted by the armed force of the enemy into whose power, by the events of war, they may happen to fall; but if any thing is necessary to be taken from them for the use of such armed force, the same shall be paid for at a reasonable price. And all merchant and trading vessels employed in exchanging the products of different places, and thereby rendering the necessaries, conveniences, and comforts of human life more easy to be obtained, and more general, shall be allowed to pass free and unmolested; and neither of the contracting powers shall grant or issue any commission to any private armed vessels, empowering them to take or destroy such trading vessels, or interrupt such commerce.

REMARKS CONCERNING THE SAVAGES OF
NORTH AMERICA.

SAVAGES we call them, because their manners differ from ours, which we think the perfection of civility; they think the same of theirs.

Perhaps, if we could examine the manners of different nations with impartiality, we should find no people so rude as to be without any rules of politeness; nor any so polite as not to have some remains of rudeness.

The Indian men, when young, are hunters and warriors; when old, counselors; for all their government is by the counsel or advice of the sages; there is no force, there are no prisons, no officers to compel obedience, or inflict punishment. Hence they generally study oratory; the best speaker having the most influence. The Indian women till the ground, dress the food, nurse and bring up the children, and preserve and hand down to posterity the memory of public transactions. These employments of men and women are accounted natural and honorable. Having few artificial wants, they have abundance of leisure for improvement in conversation. Our laborious manner of life, compared with theirs, they esteem slavish and base; and the learning on which we value ourselves, they regard as frivolous and useless. An instance of this occurred at the treaty of Lancaster, in Pennsylvania, anno 1744, between the government of Virginia and the Six Nations. After the principal business was settled, the commissioners from Virginia acquainted the Indians by a speech, that there was at Williamsburgh a college, with a fund, for educating Indian youth; and that if the chiefs of the Six Nations would send down half a dozen of their sons to that college, the government would take care that they should be well provided for, and instructed in all the learning of the white people. It is one of the Indian rules of politeness not to answer a public proposition the same

day that it is made: they think that it would be treating it as a light matter, and they show it respect by taking time to consider it, as of a matter important. They therefore deferred their answer till the day following: when their speaker began by expressing their deep sense of the kindness of the Virginia government, in making them that offer; "For we know," says he, "that you highly esteem the kind of learning taught in those colleges, and that the maintenance of our young men, while with you, would be very expensive to you. We are convinced, therefore, that you mean to do us good by your proposal; and we thank you heartily. But you who are wise must know, that different nations have different conceptions of things; and you will therefore not take it amiss, if our ideas of this kind of education happen not to be the same with yours. We have had some experience of it; several of our young people were formerly brought up at the colleges of the northern provinces; they were instructed in all your sciences; but when they came back to us they were bad runners; ignorant of every means of living in the woods; unable to bear either cold or hunger; knew neither how to build a cabin, take a deer, or kill an enemy; spoke our language imperfectly; were therefore neither fit for hunters, warriors or counselors; they were totally good for nothing. We are not, however, the less obliged by your kind offer, though we decline accepting it; and to show our grateful sense of it, if the gentlemen of Virginia will send us a dozen of their sons, we will take great care of their education, instruct them in all we know, and make men of them."

Having frequent occasions to hold public councils, they have acquired great order and decency in conducting them. The old men sit in the foremost ranks, the warriors in the next, and the women and children in the hindmost. The business of the women is to take exact notice of what passes, imprint it in their memories, for they have no writing, and communicate it to the children. They are the records of the

council, and they preserve tradition of the stipulations in treaties a hundred years back; which, when we compare with our writings, we always find exact. He that would speak, rises. The rest observe a profound silence. When he has finished, and sits down, they leave him five or six minutes to recollect, that if he has omitted any thing he intended to say, or has any thing to add, he may rise again and deliver it. To interrupt another, even in common conversation, is reckoned highly indecent. How different this is from the conduct of a polite British house of commons, where scarce a day passes without some confusion, that makes the speaker hoarse in calling *to order*; and how different from the mode of conversation, in many polite companies of Europe, where, if you do not deliver your sentences with great rapidity, you are cut off in the middle of it by the impatient loquacity of those you converse with, and never suffered to finish it!

The politeness of these savages in conversation is indeed carried to excess; since it does not permit them to contradict or deny the truth of what is asserted in their presence. By this means they indeed avoid disputes; but then it becomes difficult to know their minds, or what impression you make upon them. The missionaries, who have attempted to convert them to christianity, all complain of this as one of the great difficulties of their mission. The Indians hear with patience the truths of the gospel explained to them, and give their usual tokens of assent and approbation; you would think they were convinced. No such matter—it is mere civility.

A Swedish minister having assembled the chiefs of the *Susquehannah Indians*, made a sermon to them, acquainting them with the principal historical facts on which our religion is founded; such as the fall of our first parents by eating an apple; the coming of Christ to repair the mischief; his miracles, and sufferings, &c. When he had finished, an Indian orator stood up to thank him. "What you have told us," says he, "is all very good. It is indeed bad to eat apples. It is

better to make them all into cider. We are much obliged by your kindness in coming so far to tell us those things which you have heard from your mothers. In return, I will tell you some of those which we have heard from ours."

"In the beginning, our fathers had only the flesh of animals to subsist on; and if their hunting was unsuccessful, they were starving. Two of our young hunters having killed a deer, made a fire in the woods to broil some parts of it. When they were about to satisfy their hunger, they beheld a beautiful young woman descend from the clouds, and seat herself on that hill which you see yonder among the blue mountains. They said to each other, it is a spirit that perhaps smelt our broiled venison, and wishes to eat of it; let us offer some to her. They presented her with the tongue; she was pleased with the taste of it, and said, 'Your kindness shall be rewarded. Come to this place after thirteen moons, and you shall find something that will be of great benefit in nourishing you and your children to the latest generation.' They did so, and to their surprise, found plants they had never seen before; but which, from that ancient time, have been constantly cultivated among us, to our great advantage. Where her right hand had touched the ground, they found maize—where her left hand had touched it, they found kidney-beans; and where her backside had sat on it, they found tobacco." The good missionary, disgusted with this idle tale, said, "What I delivered to you were sacred truths; but what you tell me is mere fable, fiction, and falsehood." The Indian, offended, replied, "My brother, it seems your friends have not done you justice in your education; they have not well instructed you in the rules of common civility. You say that we, who understand and practise those rules, believed all your stories, why do you refuse to believe ours?"

When any of them come into your towns, your people are apt to crowd round them, gaze upon them, and incommode them where they desire to be private; this

they esteem great rudeness, and the effect of the want of instruction in the rules of civility and good manners. "We have," say they, "as much curiosity as you, and when you come into our towns, we wish for opportunities for looking at you; but for this purpose we hide ourselves behind bushes, where you are to pass, and never intrude ourselves into your company."

Their manner of entering one another's villages has likewise its rules. It is reckoned uncivil in traveling strangers to enter a village abruptly, without giving notice of their approach. Therefore, as soon as they arrive within hearing, they stop and halloo, remaining there till invited to enter. Two old men usually come out to them, and lead them in. There is in every village a vacant dwelling, called the stranger's house. Here they are placed, while the old men go round from hut to hut, acquainting the inhabitants that strangers are arrived, who are probably hungry and weary, and every one sends them what he can spare of victuals and skins to repose on. When the strangers are refreshed, pipes and tobacco are brought; and then, but not before, conversation begins, with inquiries who they are, whither bound, what news, &c. and it usually ends with offers of service, if the strangers have occasion for guides, or any necessaries for continuing their journey; and nothing is exacted for the entertainment.

The same hospitality, esteemed among them as a principal virtue, is practised by private persons; of which *Conrad Weiser*, our interpreter, gave me the following instance. He had been naturalized among the Six Nations, and spoke well the Mohock language. In going through the Indian country, to carry a message from our governor to the council at Onondaga, he called at the habitation of *Canassettego*, an old acquaintance, who embraced him, spread furs for him to sit on, placed before him some boiled beans and venison, and mixed some rum and water for his drink. When he was well refreshed, and had lit his pipe, *Canassettego* began to converse with him; asked him

how he had fared the many years since they had seen each other, whence he then came, what occasioned the journey, &c. Conrad answered all his questions; and when the discourse began to flag, the Indian, to continue it, said,—

“Conrad, you have lived long among the white people, and know something of their customs; I have been sometimes at Albany, and have observed, that once in seven days they shut up their shops and assemble all in the great house; tell me what it is for? What do they do there?” “They meet there,” says Conrad, “to hear and learn *good things*.” “I do not doubt,” says the Indian, “that they tell you so; they have told me the same: but I doubt the truth of what they say, and I will tell you my reasons. I went lately to Albany to sell my skins, and buy blankets, knives, powder, rum, &c. You know I used generally to deal with Hans Hanson; but I was a little inclined this time to try some other merchants. However, I called first upon Hans, and asked him what he would give for beaver. He said he could not give more than four shillings a pound: but said he, I cannot talk on business now; this is the day when we meet together to learn *good things*, and I am going to the meeting. So I thought to myself, since I cannot do any business today, I may as well go to the meeting too, and I went with him. There stood up a man in black, and began to talk to the people very angrily. I did not understand what he said; but perceiving that he looked much at me and at Hanson, I imagined he was angry at seeing me there; so I went out, sat down near the house, struck fire, and lit my pipe, waiting till the meeting should break up. I thought too, that the man had mentioned something of beaver; and I suspected it might be the subject of their meeting. So when they came out, I accosted my merchant, ‘Well, Hans, (says I,) I hope you have agreed to give more than four shillings a pound.’ ‘No,’ says he, ‘I cannot give so much; I cannot give more than three shillings and sixpence.’ I then spoke to several other dealers,

but they all sung the same song, three and sixpence, three and sixpence. This made it clear to me that my suspicion was right; and that, whatever they pretended of meeting to learn good things, the real purpose was to consult how to cheat Indians in the price of beaver. Consider but a little, Conrad, and you must be of my opinion. If they met so often to learn good things, they would certainly have learned some before this time. But they are still ignorant. You know our practice: If a white man, in traveling through our country enters one of our cabins, we all treat him as I do you; we dry him if he is wet, we warm him if he is cold, and give him meat and drink, that he may allay his thirst and hunger; and we spread soft furs for him to rest and sleep on: we demand nothing in return.* But if I go into a white man's house at Albany, and ask for victuals and drink, they say, Where is your money? And if I have none, they say, Get out you Indian dog. You see that they have not learned those little good things that we need no meetings to be instructed in, because our mothers taught them us when we were children; and therefore it is impossible their meetings should be, as they say, for any such purpose, or have any such effect; they are only to contrive the cheating of Indians in the price of beaver."

*It is remarkable that in all ages and countries, hospitality has been allowed as the virtue of those, whom the civilized were pleased to call barbarians: the Greeks celebrated the Scythians for it; the Saracens possessed it eminently; and it is to this day the reigning virtue of the wild Arabs. St. Paul, too, in the relation of his voyage and shipwreck, on the island of Melita, says, "The barbarous people showed us no little kindness; for they kindled a fire, and received us every one, because of the present rain, and because of the cold." This note is taken from a small collection of Franklin's papers printed for Dilly.

TO M. DUBOURG

CONCERNING THE DISSENSIONS BETWEEN ENGLAND AND
AMERICA.

LONDON, October 2, 1770.

I see with pleasure, that we think pretty much alike on the subjects of English America. We of the colonies have never insisted that we ought to be exempt from contributing to the common expenses necessary to support the prosperity of the empire. We only assert that having parliaments of our own, and not having representatives in that of Great Britain, our parliaments are the only judges of what we can and what we ought to contribute in this case; and that the English parliament has no right to take our money without our consent. In fact, the British empire is not a single state; it comprehends many; and though the parliament of Great Britain has arrogated to itself the power of taxing the colonies, it has no more right to do so than it has to tax Hanover. We have the same king, but not the same legislature.

The dispute between the two countries has already cost England many millions sterling, which it has lost in its commerce, and America has in this respect been a proportionable gainer. This commerce consisted principally of superfluities; objects of luxury, and fashion, which we can well do without; and the resolution we have formed, of importing no more till our grievances are redressed, has enabled many of our infant manufactures to take root; and it will not be easy to make our people abandon them in future, even should a connection more cordial than ever succeed the present troubles. I have, indeed, no doubt, that the parliament of England will finally abandon its present pretensions, and leave us to the peaceable enjoyment of our rights and privileges.

B. FRANKLIN.

A COMPARISON

OF THE CONDUCT OF THE ANCIENT JEWS, AND OF THE ANTI-FEDERALISTS, IN THE UNITED STATES OF AMERICA.

A zealous advocate for the proposed Federal Constitution in a certain public assembly said, that "the repugnance of a great part of mankind to good government was such, that he believed, that if an angel from heaven was to bring down a constitution formed there for our use, it would nevertheless meet with violent opposition."—He was reprov'd for the supposed extravagance of the sentiment; and he did not justify it. Probably it might not have immediately occurred to him, that the experiment had been tried, and that the event was recorded in the most faithful of all histories, the holy bible; otherwise he might, as it seems to me, have supported his opinion by that unexceptionable authority.

The supreme Being had been pleased to nourish up a single family, by continued acts of his attentive providence, until it became a great people: and having rescued them from bondage by many miracles performed by his servant Moses, he personally delivered to that chosen servant, in presence of the whole nation, a constitution and code of laws for their observance, accompanied and sanctioned with promises of great rewards, and threats of severe punishments, as the consequence of their obedience or disobedience.

This constitution, though the Deity himself was to be at its head (and it is therefore called by political writers a theocracy) could not be carried into execution but by means of his ministers: Aaron and his sons were therefore commissioned to be, with Moses, the first established ministry of the new government.

One would have thought that the appointment of men, who had distinguished themselves in procuring the liberty of their nation, and had hazarded their lives in openly opposing the will of a powerful monarch

who would have retained that nation in slavery, might have been an appointment acceptable to a grateful people; and that a constitution framed for them by the Deity himself, might on that account have been secure of a universal welcome reception. Yet there were, in every one of the twelve tribes, some discontented, restless spirits, who were continually exciting them to reject the proposed new government, and this from various motives.

Many still retained an affection for Egypt, the land of their nativity; and these, whenever they felt any inconvenience or hardship, through the natural and unavoidable effect of their change of situation, exclaimed against their leaders as the authors of their trouble; and were not only for returning into Egypt, but for stoning their deliverers.* Those inclined to idolatry were displeased that their golden calf was destroyed. Many of the chiefs thought the new constitution might be injurious to their particular interests; that the profitable places would be *engrossed by the families and friends of Moses and Aaron*, and others equally well born excluded.† In Josephus, and the Talmud, we learn some particulars, not so fully narrated in the Scripture. We are there told, “that Korah was ambitious of the priesthood; and offended that it was conferred on Aaron; and this, as he said, by the authority of Moses only, without the consent of the people. He accused Moses of having, by various artifices, fraudulently obtained the government, and deprived the people of their liberties; and of conspiring with Aaron to perpetuate the tyranny in their family. Thus, though Korah’s real motive was the supplanting of Aaron, he persuaded the people that he meant only the public good; and they, moved by his insinuations, began to cry out,—“Let us maintain the common liberty of our respective tribes; we

* Numbers, ch. xiv.

† Numbers, ch. xvi: ver. 3.—“And they gathered themselves together against Moses and against Aaron, and said unto them, Ye take too much upon you, seeing all the congregations are holy, every one of them,—wherefore then lift ye up yourselves above the congregation?”

have freed ourselves from the slavery imposed upon us by the Egyptians, and shall we suffer ourselves to be made slaves by Moses? If we must have a master, it were better to return to Pharaoh, who at least fed us with bread and onions, than to serve this new tyrant, who by his operations has brought us into danger of famine. They then called in question the reality of his conferences with God; and objected to the privacy of the meetings, and the preventing any of the people from being present at the colloquies, or even approaching the place, as grounds of great suspicion. They accused Moses also of peculation; as embezzling part of the golden spoons and the silver chargers, that the princes had offered at the dedication of the altar,* and the offerings of gold by the common people,† as well as most of the poll tax;‡ and Aaron they accused of pocketing much of the gold, of which he pretended to have made a molten calf. Besides peculation they charged Moses with ambition; to gratify which passion, he had, they said, deceived the people by promising to bring them to a land flowing with milk and honey: instead of doing which, he had brought them from such a land; and that he thought light of all this mischief, provided he could make himself an absolute prince.§ That, to support the new dignity with splendor in his family, the partial poll tax already levied and given to Aaron|| was to be followed by a general one,¶ which would probably be augmented from time to time, if he were suffered to go on promulgating new laws, on pretense of new occasional revelations of the Divine will, till their whole fortunes were devoured by that aristocracy.”

Moses denied the charge of peculation; and his accusers were destitute of proofs to support it; though facts, if real, are in their nature capable of proof. “I

|| Ibid, iii.

¶ Exodus, xxx.

have not," said he, (with holy confidence in the presence of God,) I have not taken from this people the value of an ass, nor done them any other injury." But his enemies had made the charge, and with some success among the populace; for no kind of accusation is so readily made, or easily believed by knaves, as the accusation of knavery.

In fine, no less than two hundred and fifty of the principal men, "famous in the congregation, men of renown,"* heading and exciting the mob, worked them up to such a pitch of frenzy, that they called out, Stone 'em, stone 'em, and thereby secure our liberties; and let us choose other captains, that they may lead us back into Egypt, in case we do not succeed in reducing the Canaanites.

On the whole, it appears that the Israelites were a people jealous of their new-acquired liberty, which jealousy was in itself no fault: but that, when they suffered it to be worked upon by artful men, pretending public good, with nothing really in view but private interest, they were led to oppose the establishment of the new constitution, whereby they brought upon themselves much inconvenience and misfortune. It further appears from the same inestimable history, that when, after many ages, the constitution had become old and much abused, and an amendment of it was proposed, the populace as they had accused Moses of the ambition of making himself a prince, and cried out, Stone him, stone him; so, excited by their high priests and scribes, they exclaimed against the Messiah, that he aimed at becoming king of the Jews, and cried, Crucify him, crucify him. From all which we may gather, that popular opposition to a public measure is no proof of its impropriety, even though the opposition be excited and headed by men of distinction.

To conclude, I beg I may not be understood to infer, that our general convention was divinely inspired

* Numbers, xvi.

when it formed the new federal constitution, merely because that constitution has been unreasonably and vehemently opposed; yet, I must own, I have so much faith in the general government of the world by Providence, that I can hardly conceive a transaction of such momentous importance to the welfare of millions now existing, and to exist in the posterity of a great nation, should be suffered to pass without being in some degree influenced, guided, and governed by that omnipotent, omnipresent, and beneficent Ruler, in whom all inferior spirits live, and move, and have their being.

NAUTICAL AFFAIRS.

THOUGH Britain bestows more attention to trade than any other nation, and though it be the general opinion that the safety of their state depends upon her navy alone; yet it seems not a little extraordinary, that most of the great improvements in ship building have originated abroad. The best sailing vessels in the royal navy have in general been French prizes. This, though it may admit of exceptions, cannot be upon the whole disputed.

Nor is Britain entirely inattentive to naval architecture; though it is no where scientifically taught, and those who devise improvements, have seldom an opportunity of bringing them into practice. What a pity it is, that no contrivance should be adopted, for concentrating the knowledge that different individuals attain in this art, into one common focus, if the expression may be admitted. Our endeavors shall not be wanting to collect together, in the best way we can, the scattered hints that shall occur under this head, not doubting but the public will receive with favor this humble attempt to awaken the attention to a subject of such great national importance.

Dr. Franklin, among the other inquiries that had engaged his attention, during a long life spent in the uninterrupted pursuit of useful improvements, did not let this escape his notice; and many useful hints, tending to perfect the art of navigation, and to meliorate the condition of seafaring people, occur in his work. In France the art of constructing ships has long been a favorite study, and many improvements in that branch have originated with them. Among the last of the Frenchmen, who have made any considerable improvement in this respect, is M. Le Roy, who has constructed a vessel well adapted to sail in rivers, where the depth of water is inconsiderable, and yet that was capable of being navigated at sea with great ease. This he effected in a great measure by the particular mode of rigging, which gave the mariners much greater power over the vessel than they could have when of the usual construction.

I do not hear that this instrument has in this case been adopted in Britain. But the advantages that would result from having a vessel of small draught of water to sail with the same steadiness, and to lie equally near the wind, as one may do that is sharper built, are so obvious, that many persons have been desirous of falling upon some way to effect it. About London, this has been attempted by means of *lee boards* (a contrivance now so generally known as not to require to be here particularly described) and not without effect. But these are subject to certain inconveniences, that render the use of them in many cases ineligible.

Others have attempted to effect the purpose by building vessels with more than one keel; and this contrivance, when adopted upon proper principles, promises to be attended with the happiest effects. But hitherto that seems to have been scarcely adverted to. Time will be necessary to eradicate common notions of very old standing, before this can be effectually done.

Mr. W. Brodie, shipmaster in Leith, has lately adopted a contrivance for this purpose, that seems to be at the same time very simple and extremely efficacious.

Necessity in this case, as in many others, was the mother of invention. He had a small, flat, ill-built boat, which was so ill constructed as scarcely to admit of carrying a bit of sail on any occasion, and which was at the same time so heavy to be rowed, that he found great difficulty in using it for his ordinary occasions: In reflecting on the means that might be adopted for giving this useless cable such a hold of the water as to admit of his employing a sail when he found it necessary, it readily occurred that a greater depth of keel would have this tendency. But a greater depth of keel, though it would have been useful for this purpose, he easily foresaw, would make his boat be extremely inconvenient on many other occasions. To effect both purposes, he thought of adopting a moveable keel, which would admit of being let down or taken up at pleasure. This idea he immediately carried into effect, by fixing a bar of iron of the depth he wanted along each side of the keel, moving upon hinges that admitted of being moved in one direction, but which could not be bent back in the opposite direction. Thus, by means of a small chain fixed to each end, these moveable keels could be easily lifted up at pleasure; so that when he was entering into a harbor, or shoal water, he had only to lift up his keels, and the boat was as capable of being managed there, as if he had wanted them entirely; and when he went out to sea, where there was depth enough, by letting them down, the lee keel took a firm hold of the water, (while the other floated loose,) and gave such a steadiness to all its movements, as can scarcely be conceived by those who have not experienced it.

This gentleman one day carried me out with him in his boat to try it. We made two experiments. At first, with a moderate breeze, when the moveable keels were kept up, the boat, when laid as near the wind as it could go, made an angle with the wake of about thirty degrees; but when the keels were let down, the same angle did not exceed five or six degrees, being nearly parallel with the course.

At another time the wind was right ahead, a brisk breeze. When we began to beat up against it, a trading sloop was very near us, steering the same course with us. This sloop went through the water a good deal faster than we could; but in the course of two hours beating to windward, we found that the sloop was left behind two feet in three; though it is certain, that if our false keels had not been let down, we could scarcely in that situation, have advanced one foot for her three.

It is unnecessary to point out to seafaring men the benefits that may be derived from this contrivance in certain circumstances, as these will be very obvious to them.

NORTH-WEST PASSAGE.

NOTWITHSTANDING the many fruitless attempts that have been made to discover a north-west passage into the South Seas, it would seem that this important geographical question is not yet fully decided; for, at a meeting of the Academy of Sciences, at Paris, held on the 13th of November last, M. Bauche, first geographer to the king, read a curious memoir concerning the north-west passage. M. de Mendoza, an intelligent captain of a vessel in the service of Spain, charged with the care of former establishments favorable to the marine, has made a careful examination of the archives of several departments: there he has found the relation of a voyage made in the year 1598, by Lorenzo Herrero de Maldonada. There it appears, that at the entry into Davis' Straits, north lat. 60 degrees and 28 of longitude, counting from the first meridian, he turned to the west, leaving Hudson's Bay on the south, and Baffin's Bay on the north. Arrived at latitude 65 and 297, he went toward the north by the Straits of Labrador, till he reached 76, and 278;

and, finding himself in the icy Sea, he turned southwest to lat. 60 and 135, where he found a strait, which separates Asia from America, by which he entered into the South Sea, which he called the Straits of Anian. This passage ought to be, according to M. Bauche, between William's Sound and Mount St. Elias. The Russians and Captain Cook have not observed it, because it is very narrow. But it is to be wished, that this important discovery should be verified, which has been overlooked for two centuries, in spite of the attempts which have been made on these coasts. M. Bauche calls this passage the Straits of Ferrer.

POSITIONS TO BE EXAMINED.

1. ALL food, or subsistence for mankind, arise from the earth or waters.

2. Necessaries of life that are not foods, and all other conveniences, have their value estimated by the proportion of food consumed while we are employed in procuring them.

3. A small people, with a large territory, may subsist on the productions of nature, with no other labor than that of gathering the vegetables and catching the animals.

4. A large people, with a small territory, find these insufficient; and, to subsist, must labor the earth, to make it produce greater quantities of vegetable food, suitable to the nourishment of men, and of the animals they intend to eat.

5. From this labor arises a great increase of vegetable and animal food, and of materials for clothing; as flax, wool, silk, &c. The superfluity of these is wealth. With this wealth we pay for the labor employed in building our houses, cities, &c. which are therefore only subsistence thus metamorphosed.

6. Manufactures are only another shape into which so much provisions and substance are turned, as were in value equal to the manufactures produced. It appears from hence, that the manufacturer does not, in fact, obtain from the employer, for his labor, more than a mere subsistence, including raiment, fuel, and shelter: all which derive their value from the provisions consumed in procuring them.

7. The produce of the earth, thus converted into manufactures, may be more easily carried into distant markets, than before such conversion.

8. Fair commerce is where equal values are exchanged for equal, the expense of transport included. Thus, if it cost A. in England, as much labor and charge to raise a bushel of wheat, as it cost B. in France to produce four gallons of wine, then are four gallons of wine the fair exchange for a bushel of wheat: A. and B. meeting at a half distance with commodities to make the exchange. The advantage of this fair commerce is, that each party increases the number of his enjoyments, having, instead of wheat alone, or wine alone, the use of both wheat and wine.

9. Where the labor and expense of producing both commodities are known to both parties, bargains will generally be fair and equal. Where they are known to one party only, bargains will often be unequal—knowledge taking its advantage of ignorance.

10. Thus he that carries a thousand bushels of wheat abroad to sell, may not probably obtain so great a profit thereon as if he had first turned the wheat into manufactures, by subsisting therewith the workmen while producing those manufactures, since there are many expediting and facilitating methods of working, not generally known; and strangers to the manufactures, though they know pretty well the expense of raising wheat, are unacquainted with those short methods of working; and thence, being apt to suppose more labor employed in the manufacture than there really is, are more easily imposed on in their value, and induced to allow more for them than they are honestly worth.

11. Thus the advantage of having manufactures in a country does not consist, as is commonly supposed, in their highly advancing the value of rough materials of which they are formed, since, though sixpenny worth of flax may be worth twenty shillings when worked into lace, yet the very cause of its being worth twenty shillings is that, besides the flax, it has cost nineteen shillings and sixpence in subsistence to the manufacturer. But the advantage of manufactures is, that under their shape, provisions may be more easily carried to a foreign market: and by their means our traders may more easily cheat strangers. Few, where it is not made, are judges of the value of lace. The importer may demand forty, and perhaps get thirty shillings for that which cost him but twenty.

12. Finally, there seems to be but three ways for a nation to acquire wealth. The first is by war, as the Romans did, in plundering their conquered neighbours; this is robbery. The second by commerce, which is generally cheating. The third by agriculture, the only honest way, wherein a man receives a real increase of the seed thrown into the ground, in a kind of continual miracle, wrought by the hand of God in his favor, as a reward for his innocent life and his virtuous industry.

FRANKLIN.

PRELIMINARY ADDRESS

TO THE PENNSYLVANIA ALMANAC,

ENTITLED, "POOR RICHARD'S ALMANAC, FOR THE YEAR 1758."

I have heard, that nothing gives an author so great pleasure as to find his works respectfully quoted by other learned authors. This pleasure I have seldom enjoyed; for though I have been, if I may say it without vanity, an eminent author (of almanacs) annually,

now a full quarter of a century, my brother authors in the same way (for what reason I know not) have ever been very sparing in their applauses; and no other author has taken the least notice me: so that, did not my writings produce me some solid pudding, the great deficiency of praise would have quite discouraged me.

I concluded, at length, that the people were the best judges of my merit, for they buy my works; and besides, in my rambles, where I am not personally known, I have frequently heard one and another of my adages repeated, with "As poor Richard says," at the end on 't. This gave me some satisfaction, as it showed not only that my instructions were regarded, but discovered likewise some respect for my authority; and I own, that to encourage the practice of remembering and repeating those wise sentences, I have sometimes quoted myself with great gravity.

Judge, then, how much I have been gratified by an incident which I am going to relate to you. I stopped my horse lately, where a great number of people were collected at an auction of merchant's goods. The hour of sale not being come, they were conversing on the badness of the times; and one of the company called to a plain, clean old man, with white locks, "Pray, father Abraham, what think ye of the times? Wont these heavy taxes quite ruin the country? How shall we ever be able to pay them? What would you advise us to?" Father Abraham stood up and replied, "If you'd have my advice, I'll give it to you in short; 'for a word to the wise is enough; and many words wont fill a bushel,' as poor Richard says." They joined in desiring him to speak his mind; and gathering round him, he proceeded as follows:

"Friends (says he) and neighbors, the taxes are indeed very heavy; and if those laid on by government were the only ones we had to pay, we might more easily discharge them, but we have many others, and much more grievous to some of us. We are taxed twice as much by our idleness, three times as much

by our pride, and four times as much by our folly, and from these taxes the commissioners cannot ease or deliver us, by allowing an abatement. However, let us hearken to good advice, and something may be done for us; 'God helps them that help themselves,' as poor Richard says in his almanac.

"It would be thought a hard government that should tax its people one tenth part of their time, to be employed in its service; but idleness taxes many of us much more, if we reckon all that is spent in absolute sloth, or doing of nothing, with that which is spent in idle employments, or amusements that amount to nothing. Sloth, by bringing on diseases, absolutely shortens life. 'Sloth, like rust, consumes faster than labor wears, while the key often used is always bright,' as poor Richard says. 'But dost thou love life? then do not squander time, for that's the stuff life is made of,' as poor Richard says. How much more than is necessary do we spend in sleep, forgetting, that 'the sleeping fox catches no poultry, and that there will be sleeping enough in the grave,' as poor Richard says. 'If time be of all things the most precious, wasting time must be (as poor Richard says) the greatest prodigality;' since, as he elsewhere tells us, 'Lost time is never found again: and what we call time enough, always proves little enough.' Let us then up and be doing, and doing to the purpose; so by diligence shall we do more with less perplexity. 'Sloth makes all things difficult, but industry all easy,' as poor Richard says; and 'he that riseth late must trot all day, and shall scarce overtake his business at night; while laziness travels so slowly, that poverty soon overtakes him, as we read in poor Richard; who adds, 'Drive thy business, let not that drive thee;' and, 'early to bed, and early to rise, makes a man healthy, wealthy, and wise.'

So what signifies wishing and hoping for better times? We make these times better if we bestir ourselves. 'Industry needs not wish,' as poor Richard says; and, 'He that lives upon hope will die fasting.'

'There are no gains without pains; then help hands, for I have no lands; or if I have, they are smartly taxed;' and, (as poor Richard likewise observes) 'He that hath a trade hath an estate, and he that hath a calling hath an office of profit and honor;' but then the trade must be worked at, and the calling well followed, or neither the estate nor the office will enable us to pay our taxes. If we are industrious, we shall never starve; for, as poor Richard says, 'At the workingman's house hunger looks in, but dare not enter.' Nor will the bailiff or the constable enter; for, 'Industry pays debts, but despair increaseth them,' says poor Richard. What though you have found no treasure, nor has any rich relation left you a legacy? 'Diligence is the mother of good luck,' as poor Richard says; and 'God gives all things to industry; then plough deep while sluggards sleep, and you will have corn to sell and keep,' says poor Dick. Work while it is called to-day; for you know not how much you may be hindered to-morrow; which makes poor Richard say, 'One to-day is worth two to-morrows;' and farther, 'Have you somewhat to do to-morrow, do it to-day.' 'If you were a servant, would you not be ashamed that a good master should catch you idle! Are you then your own master, be ashamed to catch yourself idle,' as poor Dick says. When there is so much to be done for yourself, your family, and your gracious king, be up by peep of day; 'Let not the sun look down, and say, Inglorious here he lies!' 'Handle your tools without mittens;' remember, that 'the cat in gloves catches no mice,' as poor Richard says. It is true, there is much to be done, and perhaps you are weak-handed; but stick to it steadily, and you will see great effects; for, 'continual dropping wears away stones, and by diligence and patience the mouse ate into the cable, and light strokes fell great oaks,' as poor Richard says in his almanac, the year I cannot just now remember.

"Methinks I hear some of you say, 'Must a man afford himself no leisure?' — I will tell thee, my friend,

what poor Richard says; 'Employ thy time well, if thou meanest to gain leisure; and since thou art not sure of a minute, throw not away an hour.' Leisure is time for doing something useful: this leisure the diligent man will obtain, but the lazy man never; so that, as poor Richard says, 'A life of leisure and a life of laziness are two things.' Do you imagine that sloth will afford you more comfort than labor? No; for, as poor Richard says, 'Troubles spring from idleness, and grievous toils from needless ease: many without labor would live by their own wits only; but they break for want of stock.' Whereas industry gives comfort, and plenty, and respect. 'Fly pleasures, and they'll follow you; the diligent spinner has a large shift; and, now I have a sheep and cow, every body bids me good-morrow;' all which is well said by poor Richard.

"But with our industry, we must likewise be steady and settled and careful, and oversee our own affairs with our own eyes, and not trust too much to others; for, as poor Richard says,

'I never saw an oft-removed tree,
Nor yet an oft-removed family,
That throve so well as one that settled be.'

And, again, 'Three removes are as bad as a fire;' and again, 'Keep thy shop, and thy shop will keep thee;' and again, 'If you would have your business done, go; if not, send.' And again,

'He that by the plough would thrive,
Himself must either hold or drive.'

And again, 'The eye of the master will do more work than both his hands;' and again, 'Want of care does us more damage than want of knowledge;' and again, 'Not to oversee workmen, is to leave them your purse open!' Trusting too much to others' care, is the ruin of many; for, as the almanac says, in the affairs of the world, 'Men are saved not by faith, but by the want of it; but a man's own care is

profitable; for, saith poor Dick, 'Learning is to the studious, and riches to the careful, as well as power to the bold, and heaven to the virtuous.' And, farther, 'If you would have a faithful servant, and one that you like, serve yourself.' And again, he adviseth to circumspection and care, even in the smallest matters, because sometimes, 'A little neglect may breed great mischief;' adding, 'For want of a nail the shoe was lost; for want of a shoe the horse was lost; and for want of a horse the rider was lost; being overtaken and slain by the enemy — all for want of care about a horse-shoe nail.'

So much for industry, my friends, and attention to one's own business; but to these we must add frugality, if we would make our industry more certainly successful. A man may, if he knows not how to save as he gets, 'keep his nose all his life to the grindstone, and die not worth a groat at last.' 'A fat kitchen makes a lean will,' as poor Richard says, and,

'Many estates are spent in the getting;
Since women for tea forsook spinning and knitting,
And men for punch forsook hewing and splitting.'

“‘If you would be wealthy, (says he, in another almanac) think of saving as well as getting: the Indies have not made Spain rich, because her outgoes are greater than her incomes.’

“‘Away then with your expensive follies, and you will not have much cause to complain of hard times, heavy taxes, and chargeable families; for, as poor Dick says,

'Women and wine, game and deceit
Make the wealth small, and the want great.'

“‘And, farther, 'What maintains one vice would bring up two children.' You may think, perhaps, that a little tea, or a little punch now and then, diet a little more costly, clothes a little finer, and a little entertainment now and then, can be no great matter; but remember what poor Richard says, 'Many a

little makes a meikle ;' and, farther, 'Beware of little expense ; a small leak will sink a great ship ;' and again, 'Who dainties love shall beggars prove ;' and moreover, 'Fools make feasts, and wise men eat them.'

"Here you are all got together at this sale of fineries and nicknacks. You call them *goods* ; but if you do not take care, they will prove *evils* to some of you. You expect they will be sold cheap, and perhaps they may for less than they cost ; but if you have no occasion for them, they must be dear to you. Remember what poor Richard says, 'Buy what thou hast no need of, and ere long thou shalt sell thy necessaries.' And again, 'At a great pennyworth, pause awhile.' He means, that perhaps the cheapness is apparent only, or not real ; or the bargain, by straitening thee in thy business, may do thee more harm than good. For in another place he says, 'Many have been ruined by buying good pennyworths.' Again, as poor Richard says, 'It is foolish to lay out money in a purchase of repentance,' and yet this folly is practised every day at auctions, for want of minding the almanac. 'Wise men (as poor Dick says) learn by others' harms, fools scarcely by their own ; but *Felix quem factunt aliena pericula cautum.*' Many a one, for the sake of finery on the back, have gone with a hungry belly, and half starved their families : 'Silks and satins, scarlet and velvets, (as poor Richard says,) put out the kitchen fire.' These are not the necessaries of life : they can scarcely be called the conveniences ; and yet only because they look pretty, how many want to have them ? The artificial wants of mankind thus become more numerous than the natural ; and, as poor Dick says, 'For one poor person there are a hundred indigent.' By these and other extravagances, the genteel are reduced to poverty, and forced to borrow of those whom they formerly despised, but who, through industry and frugality, have maintained their standing ; in which case, it appears plainly, 'A ploughman on his legs is higher than a

gentleman on his knees,' as poor Richard says. Perhaps they have had a small estate left them, which they knew not the getting of; they think, 'It is day, and will never be night;' that a little to be spent out of so much is not worth minding: 'A child and a fool (as poor Richard says) imagine twenty shillings and twenty years can never be spent; but always be taking out of the meal-tub, and never putting in, soon comes to the bottom;' then, as poor Dick says, 'When the well is dry, they know the worth of water.' But this they might have known before, if they had taken his advice. 'If you would know the value of money, go and try to borrow some; for he that goes a-borrowing goes a-sorrowing; and, indeed, so does he that lends to such people, when he goes to get it again.' Poor Dick farther advises, and says,

'Fond pride of dress is sure a very curse;
Ere fancy you consult, consult your purse.'

And again, 'Pride is as loud a beggar as Want, and a great deal more saucy.' When you have bought one fine thing, you must buy ten more, that your appearance may be all of a piece; but poor Dick says, 'It is easier to suppress the first desire than to satisfy all that follow it.' And, it is as truly folly for the poor to ape the rich, as the frog to swell, in order to equal the ox.

'Vessels large may venture more,
But little boats should keep near shore.'

'Tis, however, a folly soon punished; for, 'Pride that dines on vanity, sups on contempt,' as poor Richard says. And, in another place, 'Pride breakfasted with Plenty, dined with Poverty, and supped with Infamy.' And after all of what use is this pride of appearance for which so much is risked, so much is suffered? It cannot promote health, or ease pain; it makes no increase of merit in the person: it creates envy; it hastens misfortune.

'What is a butterfly? at best,
He's but a caterpillar dress'd;
The gaudy fop's his picture just,'

as poor Richard says.

"But what madness must it be to run in debt for those superfluities: we are offered by the terms of this sale six months credit, and that perhaps has induced some of us to attend it, because we cannot spare the ready money, and hope now to be fine without it. But ah! think what you do when you run in debt. You give to another power over your liberty. If you cannot pay at the time, you will be ashamed to see your creditor: you will be in fear when you speak to him; you will make poor, pitiful, sneaking excuses, and by degrees come to lose your veracity, and sink into base, downright lying; for, as poor Richard says, 'The second vice is lying; the first is running in debt.' And again, to the same purpose, 'Lying rides upon debt's back;' whereas a freeborn Englishman ought not to be ashamed nor afraid to speak to any man living. But poverty often deprives a man of all spirit and virtue: 'It is hard for an empty bag to stand upright,' as poor Richard truly says. What would you think of that prince, or that government, who would issue an edict, forbidding you to dress like a gentleman or gentlewoman, on pain of imprisonment or servitude? would you not say, that you were free, have a right to dress as you please, and that such an edict would be a breach of your privileges, and such a government tyrannical? And yet you are about to put yourself under that tyranny when you run in debt for such dress! Your creditor has authority, at his pleasure, to deprive you of your liberty, by confining you in gaol, for life, or by selling you for a servant, if you should not be able to pay him. When you have got your bargain, you may, perhaps, think little of payment; but, 'Creditors (poor Richard tells us) have better memories than debtors;' and in another place he says, 'Creditors are a superstitious sect, great observers of set days and times.' The day comes

round before you are aware, and the demand is made before you are prepared to satisfy it. Or if you bear your debt in mind, the term, which at first seemed so long, will, as it lessens, appear extremely short. Time will seem to have added wings to his heels as well as at his shoulders. 'Those have a short Lent (saith poor Richard) who owe money to be paid at Easter.' Then since, as he says, 'The borrower is a slave to the lender, and the debtor to the creditor;' disdain the chain, preserve your freedom, and maintain your independency: be industrious and free; be frugal and free. At present, perhaps, you may think yourselves in thriving circumstances, and that you can bear a little extravagance without injury; but

'For age and want save while you may,
No morning sun lasts a whole day,'

as poor Richard says. Gain may be temporary and uncertain; but ever, while you live, expense is constant and certain; and 'it is easier to build two chimneys, than to keep one in fuel,' as poor Richard says. So 'Rather go to bed supperless than rise in debt.'

'Get what you can, and what you get, hold,
'T is the stone that will turn all your lead into gold,'

as poor Richard says. And when you have got the philosopher's stone, sure you will no longer complain of bad times, or the difficulty of paying taxes.

"This doctrine, my friends, is reason and wisdom: but, after all, do not depend too much upon your own industry and frugality, and prudence, though excellent things; for they may be blasted without the blessing of Heaven: and therefore ask that blessing humbly, and be not uncharitable to those that at present seem to want it, but comfort and help them. Remember Job suffered, and was afterwards prosperous.

"And now, to conclude, 'Experience keeps a dear school; but fools will learn in no other, and scarce in that; for it is true, we may give advice, but we cannot give conduct,' as poor Richard says. However,

remember this, 'They that will not be counseled, cannot be helped,' as poor Richard says; and, farther, that 'If you will not hear Reason, she will surely rap your knuckles.'"

Thus the old gentleman ended his harangue. The people heard it, and approved the doctrine, and immediately practised the contrary, just as if it had been a common sermon; for the auction opened, and they began to buy extravagantly, notwithstanding all his cautions, and their own fear of taxes. I found the good man had thoroughly studied my almanacs and digested all I had dropped on these topics, during the course of twenty-five years. The frequent mention he made of me must have tired every one else; but my vanity was wonderfully delighted with it, though I was conscious that not a tenth part of the wisdom was my own, which he ascribed to me, but rather the gleanings that I had made of the sense of all ages and nations. However, I resolved to be the better for the echo of it; and though I had first determined to buy stuff for a new coat, I went away, resolved to wear my old one a little longer. Reader, if thou wilt do the same, thy profit will be as great as mine.

I am, as ever, thine to serve thee.

RICHARD SAUNDERS.

THE INTERNAL STATE OF AMERICA.

BEING A TRUE DESCRIPTION OF THE INTEREST AND POLICY
OF THAT VAST CONTINENT.

THERE is a tradition, that, in the planting of New England, the first settlers met with many difficulties and hardships: as is generally the case when a civilized people attempt establishing themselves in a wilderness country. Being piously disposed, they sought

relief from Heaven, by laying their wants and distresses before the Lord, in frequent set days of fasting and prayer. Constant meditation and discourse on these subjects kept their minds gloomy and discontented; and, like the children of Israel, there were many disposed to return to that Egypt which persecution had induced them to abandon. At length, when it was proposed in the Assembly to proclaim another fast, a farmer of plain sense rose and remarked, that the inconveniences they suffered, and concerning which they had so often wearied Heaven with their complaints, were not so great as they might have expected, and were diminishing every day as the colony strengthened; that the earth began to reward their labor, and to furnish liberally for their subsistence; that the seas and rivers were found full of fish, the air sweet, the climate healthy; and, above all, that they were there in the full enjoyment of liberty, civil and religious: he therefore thought, that reflecting and conversing on these subjects would be more comfortable, as tending more to make them contented with their situation; and that it would be more becoming the gratitude they owed to the Divine Being, if, instead of a fast, they should proclaim a thanksgiving. His advice was taken; and from that day to this, they have, in every year, observed circumstances of public felicity sufficient to furnish employment for a thanksgiving day; which is therefore constantly ordered and religiously observed.

I see in the public newspapers of different states frequent complaints of hard times, deadness of trade, scarcity of money, &c. &c. It is not my intention to assert or maintain that these complaints are entirely without foundation. There can be no country or nation existing, in which there will not be some people so circumstanced as to find it hard to gain a livelihood; people, who are not in the way of any profitable trade, with whom money is scarce, because they have nothing to give in exchange for it; and it is always in the power of a small number to make a

great clamor. But let us take a cool view of the general state of our affairs, and perhaps the prospect will appear less gloomy than has been imagined.

The great business of the continent is agriculture. For one artisan, or merchant, I suppose, we have at least one hundred farmers, by far the greatest part cultivators of their own fertile lands, from whence many of them draw not only food necessary for their subsistence, but the materials of their clothing, so as to need very few foreign supplies; while they have a surplus of productions to dispose of, whereby wealth is gradually accumulated. Such has been the goodness of Divine Providence to these regions, and so favorable the climate, that, since the three or four years of hardship in the first settlement of our fathers here, a famine or scarcity has never been heard of among us; on the contrary, though some years may have been more and others less plentiful, there has always been provision enough for ourselves, and a quantity to spare for exportation. And although the crops of last year were generally good, never was the farmer better paid for the part he can spare commerce, as the published price currents abundantly testify. The lands he possesses are also continually rising in value with the increase of population; and, on the whole, he is enabled to give such good wages to those who work for him, that all who are acquainted with the old world must agree, that in no part of it are the laboring poor so generally well fed, well clothed, well lodged, and well paid, as in the United States of America.

If we enter the cities, we find, that since the Revolution, the owners of houses and lots of ground have had their interest greatly augmented in value; rents have risen to an astonishing height, and thence encouragement to increase building, which gives employment to an abundance of workmen, as does also the increased luxury and splendor of living of the inhabitants thus made richer. These workmen demand and obtain much higher wages than any other part of the world could afford them, and are paid in ready money

This rank of people, therefore, do not, or ought not, to complain of hard times; and they make a very considerable part of the city inhabitants.

At the distance I live from our American fisheries, I cannot speak of them with any degree of certainty; but I have not heard that the labor of the valuable race of men employed in them is worse paid, or that they meet with less success, than before the Revolution. The whalemens indeed have been deprived of one market for their oil, but another, I hear, is opening for them, which it is hoped may be equally advantageous; and the demand is constantly increasing for their spermaceti candles, which therefore bear a much higher price than formerly.

There remain the merchants and shopkeepers. Of these, though they make but a small part of the whole nation, the number is considerable, too great indeed for the business they are employed in; for the consumption of goods in every country has its limits; the faculties of the people, that is, their ability to buy and pay, are equal to a certain quantity of merchandise. If merchants calculate amiss on this proportion, and import too much, they will of course find the sale dull for the overplus, and some of them will say that trade languishes. They should, and doubtless will, grow wiser by experience, and import less.

If too many artificers in town, and farmers from the country, flattering themselves with the idea of leading easier lives, turn shopkeepers, the whole natural quantity of that business divided among them all may afford too small a share for each, and occasion complaints that trade is dead; these may also suppose that it is owing to a scarcity of money, while, in fact, it is not so much from the fewness of buyers, as from the excessive number of sellers, that the mischief arises; and, if every shopkeeping farmer and mechanic would return to the use of his plow and working tools, there would remain of widows, and other women, shopkeepers sufficient for the business, which might then afford them a comfortable maintenance.

Whoever has traveled through the various parts of Europe, and observed how small is the proportion of people in affluence or easy circumstances there, compared with those in poverty and misery; the few rich and haughty landlords, the multitude of poor, abject, rack-rented, tythe-paying tenants, and half-paid and half-starved, ragged laborers; and views here the happy mediocrity that so generally prevails throughout these states, where the cultivator works for himself, and supports his family in decent plenty, will, methinks, see abundant reason to bless Divine Providence for the evident and great difference in our favor, and be convinced that no nation known to us enjoys a greater share of human felicity.

It is true that in some of the states there are parties and discords; but let us look back, and ask if we were ever without them? Such will exist wherever there is liberty; and perhaps they help to preserve it. By the collision of different sentiments, sparks of truth are struck out, and political light is obtained. The different factions, which at present divide us, aim all at the public good; the differences are only about the various modes of promoting it. Things, actions, measures, and objects of all kinds, present themselves to the minds of men in such a variety of lights, that it is not possible we should all think alike at the same time on every subject, when hardly the same man retains at all times the same ideas of it. Parties are therefore the common lot of humanity; and ours are by no means more mischievous or less beneficial than those of other countries, nations, and ages, enjoying in the same degree the great blessing of political liberty.

Some indeed among us are not so much grieved for the present state of our affairs, as apprehensive for the future. The growth of luxury alarms them, and they think we are from that alone in the high road to ruin. They observe, that no revenue is sufficient without economy, and that the most plentiful income of a whole people from the natural productions of their country, may be dissipated in vain and needless

expenses; and poverty be introduced in the place of affluence.—This may be possible. It however rarely happens; for there seems to be in every nation a greater proportion of industry and frugality, which tend to enrich, than of idleness and prodigality, which occasion poverty; so that upon the whole there is a continual accumulation. Reflect that Spain, Gaul, Germany, and Britain were, in the time of the Romans, inhabited by people little richer than our savages, and consider the wealth that they at present possess, in numerous, well built cities, improved farms, rich movables, magazines stocked with valuable manufactories, to say nothing of plate, jewels, and coined money; and all this, notwithstanding their bad, wasteful, plundering governments, and their mad, destructive wars; and yet luxury and extravagant living has never suffered much restraint in those countries. Then consider the great proportion of industrious, frugal farmers inhabiting the interior parts of these American states, and of whom the body of our nation consists, and judge whether it is possible that the luxury of our seaports can be sufficient to ruin such a country. If the importation of foreign luxuries could ruin a people, we should probably have been ruined long ago; for the British nation claimed a right, and practised it, of importing among us not only the superfluities of their own products, but those of every nation under heaven; we bought and consumed them, and yet we flourished and grew rich. At present our independent governments may do what we could not then do, discourage by heavy duties, or prevent by heavy prohibitions, such importations, and thereby grow richer; if indeed, which may admit of dispute, the desire of adorning ourselves with fine clothes, possessing fine furniture, with elegant houses, &c. is not, by strongly inciting to labor and industry, the occasion of producing a greater value than is consumed in the gratification of that desire.

The agriculture and fisheries of the United States are the great sources of our increasing wealth. He

that puts a seed into the earth is recompensed, perhaps, by receiving forty out of it, and he who draws a fish out of our water, draws up a piece of silver.

Let us (and there is no doubt but we shall) be attentive to these, and then the power of rivals, with all their restraining and prohibiting acts, cannot much hurt us. We are sons of the earth and seas, and, like Antæus in the fable, if in wrestling with a Hercules, we now and then receive a fall, the touch of our parents will communicate to us fresh strength and vigor to renew the contest.

INFORMATION

TO THOSE WHO WOULD REMOVE TO AMERICA.

MANY persons in Europe having directly, or by letters, expressed to the writer of this, who is well acquainted with North America, their desire of transporting and establishing themselves in that country, but who appear to have formed, through ignorance, mistaken ideas and expectations of what is to be obtained there; he thinks it may be useful, and prevent inconvenient, expensive, and fruitless removals and voyages of improper persons, if he gives some clearer and truer notions of that part of the world than appear to have hitherto prevailed.

He finds it is imagined by numbers, that the inhabitants of North America are rich, capable of rewarding, and disposed to reward, all sorts of ingenuity; that they are at the same time ignorant of all the sciences, and consequently that strangers, possessing talents in the belles-lettres, fine arts, &c. must be highly esteemed and so well paid as to become easily rich themselves; that there are also abundance of profitable offices to be disposed of, which the natives are not qualified to fill; and that having few persons of family among them, strangers of birth must be greatly

respected, and of course easily obtain the best of those offices, which will make all their fortunes: that the governments too, to encourage emigrations from Europe, not only pay the expense of personal transportation, but give land gratis to strangers, with negroes to work for them, utensils of husbandry, and stocks of cattle. These are all wild imaginations; and those who go to America with expectations founded upon them will surely find themselves disappointed.

The truth is, that though there are in that country few people so miserable as the poor of Europe, there are also very few that in Europe would be called rich: it is rather a general happy mediocrity that prevails. There are a few great proprietors of the soil, and few tenants; most people cultivate their own lands, or follow some handicraft or merchandise; very few rich enough to live idly upon their rents or incomes, or to pay the high prices given in Europe, for painting, statues, architecture, and the other works of art that are more curious than useful. Hence the natural geniuses that have arisen in America, with such talents, have uniformly quitted that country for Europe, where they can be more suitably rewarded. It is true that letters and mathematical knowledge are in esteem there, but they are at the same time more common than is apprehended; there being already existing nine colleges, or universities; viz. four in New England, and one in each of the provinces of New York, New Jersey, Pennsylvania, Maryland, and Virginia — all furnished with learned professors; besides a number of smaller academies: these educate many of their youth in the languages, and those sciences that qualify men for the professions of divinity, law, or physic. Strangers, indeed, are by no means excluded from exercising those professions; and the quick increase of inhabitants every where gives them a chance of employ, which they have in common with the natives. Of civil offices or employments, there are few; no superfluous ones, as in Europe; and it is a rule established in some of the

States, that no office should be so profitable as to make it desirable. The 36th article of the constitution of Pennsylvania runs expressly in these words: "As every freeman, to preserve his independence (if he has not sufficient estate,) ought to have some profession, calling, trade, or farm, whereby he may honestly subsist, there can be no necessity for, nor use in establishing, offices of profit; the usual effects of which are dependence and servility; unbecoming freemen, in the possessors and expectants; faction, contention, corruption, and disorder among the people. Wherefore, whenever an office, through increase of fees or otherwise, becomes so profitable as to occasion many to apply for it, the profits ought to be lessened by the legislature.

These ideas, prevailing more or less in the United States, it cannot be worth any man's while, who has the means of living at home, to expatriate himself in hopes of obtaining a profitable civil office in America; and as to military offices, they are at an end with the war, the armies being disbanded. Much less is it advisable for a person to go thither, who has no other quality to recommend him than his birth. In Europe it has indeed its value; but it is a commodity that cannot be carried to a worse market than to that of America, where people do not inquire concerning a stranger, *What is he?* but *What can he do?* If he has any useful art, he is welcome; and if he exercises it, and behaves well, he will be respected by all that know him: but a mere man of quality, who on that account wants to live upon the public by some office or salary, will be despised and disregarded. The husbandman is in honor there, and even the mechanic, because their employments are useful. The people have a saying, that God Almighty is himself a mechanic, the greatest in the universe; and he is respected and admired more for the variety, ingenuity, and utility of his handicraft works, than for the antiquity of his family. They are pleased with the observations of a negro, and

frequently mention it, that Bocarrora (meaning the white man) make de black man workee, make de horse workee, make de ox workee, make ebery ting workee, only de hog. He, de hog, no workee; he eat, he drink, he walk about, he go to sleep when he please, he lib like a gentleman. According to these opinions of the Americans, one of them would think himself more obliged to a genealogist, who could prove for him that his ancestors and relations for ten generations had been ploughmen, smiths, carpenters, turners, weavers, tanners, or even shoemakers, and consequently that they were useful members of society; than if he could only prove that they were gentlemen, doing nothing of value, but living idly on the labor of others, mere *fruges consumere nati*,* and otherwise *good for nothing*, till by their death their estates, like the carcass of the negro's gentleman-hog, come to be *cut up*.

With regard to encouragements for strangers from government, they are really only what are derived from good laws and liberty. Strangers are welcome, because there is room enough for them all, and therefore the old inhabitants are not jealous of them; the laws protect them sufficiently, so that they have no need of the patronage of great men; and every one will enjoy securely the profits of his industry. But if he does not bring a fortune with him, he must work and be industrious to live. One or two years' residence gives him all the rights of a citizen; but the government does not at present, whatever it may have done in former times, hire people to become settlers, by paying their passage, giving land, negroes, utensils, stock, or any other kind of emolument whatsoever. In short, America is the land of labor, and by no means what the English call *Lubberland*, and the French *Pays de Cocagne*, where the streets are said to be paved with half-peck loaves, the houses

* ————— "born
Merely to eat up corn,"—*Watts*.

tilled with pancakes, and where the fowls fly about ready roasted, crying, *Come eat me!*

Who then are the kind of persons to whom an emigration to America may be advantageous? And what are the advantages they may reasonably expect?

Land being cheap in that country, from the vast forests still void of inhabitants, and not likely to be occupied in an age to come, insomuch that the property of a hundred acres of fertile soil full of wood, may be obtained near the frontiers, in many places, for eight or ten guineas, hearty young laboring men, who understand the husbandry of corn and cattle, which is nearly the same in that country as in Europe, may easily establish themselves there. A little money, saved of the good wages they receive there while they work for others, enables them to buy the land and begin their plantation, in which they are assisted by the good will of their neighbors, and some credit. Multitudes of poor people from England, Ireland, Scotland, and Germany, have, by this means, in a few years, become wealthy farmers, who, in their own countries, where all the lands are fully occupied, and the wages of labor low, could never have emerged from the mean condition wherein they were born.

From the salubrity of the air, the healthiness of the climate, the plenty of good provisions, and the encouragement to early marriages, by the certainty of subsistence in cultivating the earth, the increase of inhabitants by natural generation, is very rapid in America: and becomes still more so by the accession of strangers; hence there is a continual demand for more artisans of all the necessary and useful kinds, to supply those cultivators of the earth with houses, and with furniture and utensils of the grosser sorts, which cannot so well be brought from Europe. Tolerably good workmen in any of those mechanic arts are sure to find employ, and to be well paid for their work, there being no restraints preventing strangers from exercising any art they understand, nor any

permission necessary. If they are poor, they begin first as servants or journeymen; and if they are sober, industrious, and frugal, they soon become masters, establish themselves in business, marry, raise families, and become respectable citizens.

Also, persons of moderate fortunes and capitals, who, having a number of children to provide for, are desirous of bringing them up to industry, and to secure estates for their posterity, have opportunities of doing it in America, which Europe does not afford. There they may be taught and practise profitable mechanic arts, without incurring disgrace on that account; but, on the contrary, acquire respect by such abilities. There small capitals laid out in lands, which daily become more valuable by the increase of people, afford a solid prospect of ample fortunes thereafter for those children. The writer of this has known several instances of large tracts of land, bought on what was then the frontiers of Pennsylvania, for ten pounds per hundred acres, which, after twenty years, when the settlements had been extended far beyond them, sold readily, without any improvement made upon them, for three pounds per acre. The acre of America is the same with the English acre, or the acre of Normandy.

Those who desire to understand the state of government in America, would do well to read the constitutions of the several states, and the articles of confederation which bind the whole together for general purposes, under the direction of one assembly, called the Congress. These constitutions have been printed, by order of congress, in America; two editions of them have been printed in London; and a good translation of them into French, has lately been published at Paris.

Several of the princes of Europe having of late, from an opinion of advantage to arise by producing all commodities and manufactures within their own dominions, so as to diminish or render useless their importations, have endeavored to entice workmen

from other countries, by high salaries, privileges, &c. Many persons, pretending to be skilled in various great manufactures, imagining that America must be in want of them, and that the congress would probably be disposed to imitate the princes above mentioned, have proposed to go over on condition of having their passages paid, lands given, salaries appointed, exclusive privileges for terms of years, &c. Such persons, on reading the articles of confederation, will find that the congress have no power committed to them, or money put into their hands, for such purposes; and that, if any such encouragement is given, it must be by the government of some separate state. This, however, has rarely been done in America; and when it has been done, has rarely succeeded, so as to establish a manufacture, which the country was not yet so ripe for as to encourage private persons to set it up; labor being generally too dear, and hands difficult to be kept together, every one desiring to be a master, and the cheapness of land inclining many to leave trades for agriculture. Some indeed have met with success, and are carried on to advantage; but they are generally such as require only a few hands, or wherein great part of the work is performed by machines. Goods that are bulky, and of so small a value as not well to bear the expense of freight, may often be made cheaper in the country than they can be imported; and the manufacture of such goods will be profitable wherever there is a sufficient demand. The farmers in America produce indeed a good deal of wool and flax, and none is exported—it is all worked up; but it is in the way of domestic manufacture, for the use of the family. The buying up quantities of wool and flax, with the design to employ spinners, weavers, &c. and form great establishments, producing quantities of linen and woollen goods for sale, has been several times attempted in different provinces; but those projects have generally failed, goods of equal value being imported cheaper. And when the governments have been solicited to

support such schemes by encouragements in money, or by imposing duties on importation of such goods, it has been generally refused, on this principle, that if the country is ripe for the manufacturer, it may be carried on by private persons to advantage; and, if not, it is folly to think of forcing nature. Great establishments of manufacture require great numbers of poor to do the work for small wages; those poor are to be found in Europe, but will not be found in America, till the lands are all taken up and cultivated, and the excess of people who cannot get land, want employment. The manufacture of silk, they say, is natural to France, as that of cloth in England, because each country produces in plenty the first material; but if England will have a manufacture of silk as well as that of cloth, and France of cloth as well as that of silk, these unnatural operations must be supported by mutual prohibitions, or high duties on the importation of each other's goods; by which means the workmen are enabled to tax the home consumer by greater prices, while the higher wages they receive makes them neither happier nor richer, since they only drink more and work less. Therefore the governments in America do nothing to encourage such projects. The people by this means are not imposed on either by the merchant or mechanic: if the merchant demands too much profit on imported shoes, they buy of the shoemaker; and if he asks too high a price, they take them of the merchant: thus the two professions are checks on each other. The shoemaker however has, on the whole, a considerable profit upon his labor in America, beyond what he had in Europe, as he can add to his price a sum nearly equal to all the expenses of freight and commission, risk or assurance, &c. necessarily charged by the merchant. And the case is the same with the workman in every other mechanic art. Hence it is, that the artisans generally live better and more easily in America than in Europe; and such as are good economists, make a comfortable provision for age, and

for their children. Such may, therefore, move with advantage to America.

In the old long-settled countries of Europe, all arts, trades, professions, farms, &c. are so full that it is difficult for a poor man, who has children, to place them where they may gain, or learn to gain, a decent livelihood. The artisans, who fear creating future rivals in business, refuse to take apprentices, but upon conditions of money; maintenance, or the like, which the parents are unable to comply with. Hence the youth are dragged up in ignorance of every gainful art, and obliged to become soldiers, or servants, or thieves, for a subsistence. In America the rapid increase of inhabitants takes away that fear of rivalry, and artisans willingly receive apprentices from the hope of profit by their labor, during the remainder of the time stipulated, after they shall be instructed. Hence it is easy for poor families to get their children instructed; for the artisans are so desirous of apprentices, that many of them will even give money to the parents, to have boys from ten to fifteen years of age bound apprentices to them, till the age of twenty-one; and many poor parents have, by that means, on their arrival in the country, raised money enough to buy land sufficient to establish themselves, and to subsist the rest of the family by agriculture. These contracts for apprentices are made before a magistrate, who regulates the agreement according to reason and justice; and, having in view the formation of a future useful citizen, obliges the master to engage by a written indenture, not only that, during the time of service stipulated, the apprentice shall be duly provided with meat, drink, apparel, washing, and lodging, and at its expiration with a complete new suit of clothes, but also, that he shall be taught to read, write, and cast accounts; and that he shall be well instructed in the art or profession of his master, or some other, by which he may afterwards gain a livelihood, and be able, in his turn, to raise a family. A copy of this indenture is given to the apprentice or

his friends, and the magistrate keeps a record of it, to which recourse may be had, in case of failure by the master in any point of performance. This desire among the masters to have more hands employed in working for them, induces them to pay the passage of young persons of both sexes, who, on their arrival, agree to serve them one, two, three, or four years; those who have already learned a trade, agreeing for a shorter term in proportion to their skill, and the consequent immediate value of their service; and those who have none, agreeing for a longer term, in consideration of being taught an art their poverty would not permit them to acquire in their own country.

The almost general mediocrity of fortune that prevails in America, obliging its people to follow some business for subsistence, those vices that arise usually from idleness are in a great measure prevented. Industry and constant employment are great preservatives of the morals and virtue of a nation. Hence bad examples to youth are more rare in America, which must be a comfortable consideration to parents. To this may be truly added, that serious religion, under its various denominations, is not only tolerated, but respected and practised. Atheism is unknown there; and infidelity rare and secret; so that persons may live to a great age in that country without having their piety shocked by meeting with either an atheist or an infidel. And the Divine Being seems to have manifested his approbation of the mutual forbearance and kindness with which the different sects treat each other, by the remarkable prosperity with which he has been pleased to favor the whole country.

HUMOROUS ACCOUNT OF A CUSTOM

AMONG THE AMERICANS, ENTITLED WHITEWASHING, ATTRIBUTED TO THE PEN OF DR. FRANKLIN.

ALTHOUGH the following article has not yet appeared in any collection of the works of this great philosopher, we are inclined to receive the general opinion (from the plainness of the style, and humor which characterize it,) that it is the performance of Dr. Franklin.

My wish is to give you some account of the people of these new states, but I am far from being qualified for the purpose, having as yet seen little more than the cities of New York and Philadelphia. I have discovered but few national singularities among them. Their customs and manners are nearly the same with those of England, which they have long been used to copy. For, previous to the Revolution, the Americans were from their infancy taught to look up to the English as patterns of perfection in all things. I have observed, however, one custom, which, for aught I know, is peculiar to this country; an account of it will serve to fill up the remainder of this sheet, and may afford you some amusement.

When a young couple are about to enter into the matrimonial state, a never failing article in the marriage treaty is, that the lady shall have and enjoy the free and unmolested exercise of the rights of *whitewashing*, with all its ceremonials, privileges, and appurtenances. A young woman would forego the most advantageous connexion, and even disappoint the warmest wishes of her heart, rather than resign the invaluable right. You will wonder what this privilege of *whitewashing* is: I will endeavor to give you some idea of the ceremony, as I have seen it performed.

There is no season of the year in which the lady may not claim her privilege, if she pleases; but the

latter end of May is most generally fixed upon for the purpose. The attentive husband may judge by certain prognostics when the storm is nigh at hand. When the lady is unusually fretful, finds fault with the servants, is discontented with the children, and complains much of the filthiness of every thing about her—these are signs which ought not to be neglected; yet they are not decisive, as they sometimes come on and go off again without producing any farther effect. But if, when the husband rises in the morning, he should observe in the yard a wheelbarrow with a quantity of lime in it, or should see certain buckets with lime dissolved in water, there is then no time to be lost; he immediately locks up the apartment or closet, where his papers or private property is kept, and putting the key in his pocket, betakes himself to flight: for a husband, however beloved, becomes a perfect nuisance during this season of female rage; his authority is superseded, his commission is suspended, and the very scullion, who cleans the brasses in the kitchen, becomes of more consideration and importance than he. He has nothing for it but to abdicate, and run from an evil which he can neither prevent nor mollify.

The husband gone, the ceremony begins. The walls are in a few minutes stripped of their furniture; paintings, prints, and looking-glasses lie in a huddled heap about the floors, the curtains are torn from the testers, the beds crammed into the windows; chairs and tables, bedsteads and cradles, crowd the yard; and the garden fence bends beneath the weight of carpets, blankets, cloth, cloaks, old coats, and ragged breeches. *Here* may be seen the lumber of the kitchen, forming a dark and confused mass: for the foreground of the picture, gridirons and fryingpans, rusty shovels and broken tongs, spits and pots, and the fractured remains of rush-bottomed chairs. *There* a closet has disgorged its bowels, cracked tumblers, broken wine glasses, phials of forgotten physic, papers of unknown powders, seeds and dried herbs,

handfuls of old corks, tops of teapots, and stoppers of departed decanters;—from the rag-hole in the garret to the rat-hole in the cellar, no place escapes unruined. It would seem as if the day of general doom was come, and the utensils of the house were dragged forth to judgment. In this tempest the words of *Lear* naturally present themselves, and might with some alteration, be made strictly applicable:

——“ Let the great gods,
That keep this dreadful pudder o'er our heads,
Find out their enemies now. Tremble, thou wretch!
That has within thee, undivulged crimes,
Unwhipt of justice!”—

——“ Close pent up guilt,
Raise your concealing continents, and ask
These dreadful summoners grace!”

The ceremony completed, and the house thoroughly evacuated, the operation is to smear the walls and ceilings of every room and closet with brushes dipped in a solution of lime, called *whitewash*; to pour buckets of water over every floor; and scratch all the partitions and wainscots with rough brushes wet with soapsuds, and dipped in stone cutter's sand. The windows by no means escape the general deluge. A servant scrambles upon the penthouse, at the risk of her neck, and with a mug in her hand, and a bucket within her reach, she dashes away innumerable gallons of water against the glass panes; to the great annoyance of the passengers in the street.

I have been told that an action at law was once brought against one of these water-nymphs, by a person who had a new suit of clothes spoiled by this operation; but after a long argument, it was determined by the whole court, that the action would not lie, insomuch as the defendant was in the exercise of a legal right, and not answerable for the consequences; and so the poor gentleman was doubly nonsuited: for he lost not only his suit of clothes, but his suit at law.

These smearings and scratchings, washing and dashings, being duly performed, the next ceremony is to

cleanse and replace the distracted furniture. You may have seen a house raising, or a ship launch, when all the hands within reach are collected together: recollect, if you can, the hurry, bustle, confusion, and noise of such a scene, and you will have some idea of this cleaning match. The misfortune is, that the sole object is to make things clean; it matters not how many useful, ornamental, or valuable articles are mutilated, or suffer death under the operation: a mahogany chair and carved frame undergo the same discipline; they are to be made *clean* at all events; but their preservation is not worthy of attention. For instance, a fine large engraving is laid flat upon the floor; smaller prints are piled upon it, and the superincumbent weight cracks the glasses of the lower tier, but this is of no consequence. A valuable picture is placed leaning against the sharp corner of a table, others are made to lean against that, until the pressure of the whole forces the corner of the table through the canvass of the first. The frame and glass of a fine print are to be *cleaned*; the spirit and oil used on this occasion are suffered to leak through and spoil the engraving; no matter, if the glass is clean, and the frame shine, it is sufficient; the rest is not worthy of consideration. An able arithmetician has made an accurate calculation, founded on long experience, and has discovered, that the losses and destruction incident to two whitewashings are equal to one removal, and three removals equal to one fire.

The cleaning frolic over, matters begin to resume their pristine appearance. The storm abates, and all would be well again, but it is impossible that so great a convulsion, in so small a community, should not produce some farther effects. For two or three weeks after the operation, the family are usually afflicted with sore throats or sore eyes, occasioned by the caustic quality of the lime, or with severe colds from the exhalations of wet floors or damp walls.

I know a gentleman, who was fond of accounting for every thing in a philosophical way. He considers

this, which I have called a custom, as a real periodical disease, peculiar to the climate. His train of reasoning is ingenious and whimsical; but I am not at leisure to give you a detail. The result was that he found the distemper to be incurable; but after much study he conceived he had discovered a method to divert the evil he could not subdue. For this purpose he caused a small building, about twelve feet square, to be erected in his garden, and furnished with some ordinary chairs and tables; and a few prints of the cheapest sort were hung against the walls. His hope was, that when the white-washing frenzy seized the females of his family they might repair to this apartment and scrub, and smear, and scour, to their heart's content; and so spend the violence of the disease in this outpost, while he enjoyed himself in quiet at head quarters. But the experiment did not answer his expectation; it was impossible it should, since a principal part of the gratification consists in the lady's having an uncontrolled right to torment her husband at least once a year, and to turn him out of doors, and take the reins of government into her own hands.

There is a much better contrivance than this of the philosopher's, which is to cover the walls of the house with paper: that is generally done; and though it cannot abolish, it at least shortens the period of female dominion. The paper is decorated with flowers of various fancies, and made so ornamental, that the women have admitted the fashion without perceiving the design.

There is also another alleviation of the husband's distress: he generally has the privilege of a small room or closet for his books and papers, the key of which he is allowed to keep. This is considered as a privileged place, and he stands like the land of Goshen amid the plagues of Egypt. But then he must be extremely cautious, and ever on his guard; for should he inadvertently go abroad and leave the key in his door, the housemaid, who is always on the watch for such an opportunity, immediately enters in triumph with buckets

brooms and brushes ; takes possession of the premises, and forthwith puts all his books and papers to rights to his utter confusion, and sometimes serious detriment. For instance :

A gentleman was once sued by the executors of a tradesman, on a charge found against him in the deceased's books, to the amount of thirty pounds. The defendant was strongly impressed with an idea that he had discharged the debt and taken a receipt ; but as the transaction was of long standing, he knew not where to find the receipt. The suit went on in course, and the time approached when judgment would be obtained against him. He then sat seriously down to examine a large bundle of old papers, which he had untied and displayed on a table for that purpose. In the midst of his search, he was suddenly called away on business of importance ; he forgot to lock the door of his room. The housemaid, who had been long looking out for such an opportunity, immediately entered with the usual implements, and with great alacrity fell to cleaning the room, and putting things to rights. The first object that struck her eye was the confused situation of the papers on the table ; these were without delay bundled together like so many dirty knives and forks ; but in the action a small piece of paper fell unnoticed on the floor, which happened to be the very receipt in question ; as it had no very respectable appearance, it was soon after swept out with the common dirt of the room, and carried in a rubbish-pan into the yard. The tradesman had neglected to enter the credit in his book ; the defendant could find nothing to obviate the charge, and so the judgment went against him for the debt and costs. A fortnight after the whole was settled, and the money paid, one of the children found the receipt among the rubbish in the yard.

There is another custom peculiar to the city of Philadelphia, and nearly allied to the former. I mean that of washing the pavement before the doors every Saturday evening. I at first took this to be a regulation of the police ; but, on further inquiry, find it is a

religious rite, preparatory to the Sabbath: and is, I believe, the only religious rite in which the numerous sectaries of this city perfectly agree. The ceremony begins about sunset, and continues till about ten or eleven at night. It is very difficult for a stranger to walk the streets on those evenings, he runs a continual risk of having a bucket of dirty water thrown against his legs; but a Philadelphian born is so much accustomed to the danger, that he avoids it with surprising dexterity. It is from this circumstance that a Philadelphian may be known any where by his gait. The streets of New York are paved with rough stones; these indeed are not washed, but the dirt is so thoroughly swept from before the doors, that the stones stand up sharp and prominent, to the great inconvenience of those who are not accustomed to so rough a path. But habit reconciles every thing. It is diverting enough to see a Philadelphian at New York; he walks the streets with as much most painful caution, as if his toes were covered with corns, or his feet lamed with the gout; while a New Yorker, as little approving the plain masonry of Philadelphia, shuffles along the pavement like a parrot on a mahogany table.

It must be acknowledged, that the ablutions I have mentioned are attended with no small inconvenience, but the women could not be induced, from any consideration, to resign their privilege. Notwithstanding this, I can give you the strongest assurances, that the women of America make the most faithful wives and the most attentive mothers in the world; and I am sure you will join me in opinion, that if a married man is made miserable only *one* week in a whole year, he will have no great cause to complain of the matrimonial bond.

I am, &c.

ANSWER TO THE FOREGOING, IN THE CHARACTER OF A
LADY, BUT REALLY BY THE SAME HAND.

SIR,—I have lately seen a letter upon the subject of white-washing, in which that necessary duty of a good housewife is treated with unmerited ridicule. I should probably have forgot the foolish thing by this time; but the season coming on which most women think suitable for cleansing their apartments from smoke and dirt of the winter, I find this saucy author dished up in every family, and his flippant performance quoted wherever a wife attempts to exercise her reasonable prerogative, or execute the duties of her station. Women generally employ their time to better purpose than scribbling. The cares and comforts of a family rest principally upon their shoulders; hence it is that there are but a few female authors; and the men, knowing how necessary our attentions are to their happiness, take every opportunity of discouraging literary accomplishments in the fair sex. You hear it echoed from every quarter — “My wife cannot make verses, it is true; but she makes an excellent pudding;” she can’t correct the press, but she can correct her children, and scold her servants with admirable discretion; she can’t unravel the intricacies “of political economy and federal government; but she can knit charming stockings.” And this they call praising a wife, and doing justice to her character, with much nonsense of the like kind.

I say, women generally employ their time to much better purpose than scribbling; otherwise this facetious writer had not gone so long unanswered. We have ladies who sometimes lay down the needle and take up the pen; I wonder none of them have attempted some reply. For my part, I do not pretend to be an author. I have never appeared in print in my life, but I can no longer forbear to say something in answer to such impertinence, circulate how it may. Only, sir, consider our situation. Men are naturally

inattentive to the decencies of life; but why should I be so complaisant? I say they are naturally filthy creatures. If it were not that their connection with the refined sex polished their manners, and had a happy influence on the general economy of life, these lords of creation would wallow in filth, and populous cities would infect the atmosphere with their noxious vapors. It is the attention and assiduity of the women that prevent men from degenerating into mere swine. How important then are the services we render; and yet for these very services we are made the subject of ridicule and fun. Base ingratitude! Nauseous creatures! Perhaps you may think I am in a passion. No, sir, I do assure you I never was more composed in my life; and yet it is enough to provoke a saint to see how unreasonably we are treated by the men. Why, now, there's my husband—a good enough sort of a man in the main—but I will give you a sample of him. He comes into the parlor the other day, where, to be sure, I was cutting up a piece of linen. "Lord!" says he, "what a flutter here is! I can't bear to see the parlor look like a tailor's shop; besides, I am going to make some important philosophical experiments, and must have sufficient room!"

You must know my husband is one of your would be philosophers. Well, I bundled up my linen as quick as I could, and began to darn a pair of ruffles, which took no room, and could give no offense. I thought, however, I would watch my lord and master's important business. In about half an hour the tables were covered with all manner of trumpery; bottles of water, phials of drugs, pasteboard, paper and cards, glue, paste, and gum-arabic: files, knives, scissors, needles, rosin, wax, silk, thread, rags, jags, tags, books, pamphlets, and papers. Lord bless me! I am almost out of breath, and yet I have not enumerated half the articles. Well, to work he went, and although I did not understand the object of the manœuvres, yet I could sufficiently discover that he did not succeed in any one operation. I was glad of that, I confess, and

with good reason too; for, after he had fatigued himself with mischief, like a monkey in a china shop, and called the servants to clear every thing away, I took a view of the scene my parlor exhibited. I shall not even attempt a minute description; suffice it to say, that he had overset his inkstand, and stained my best mahogany table with ink; he had spilt a quantity of vitriol, and burnt a large hole in my carpet: my marble hearth was all over spotted with melted rosin: besides this, he had broken three china cups, four wine glasses, two tumblers, and one of my handsomest decanters. And, after all, as I said before, I perceived that he had not succeeded in any one operation. By the by, tell your friend, the white-wash scribbler, that this is one means by which our closets become furnished with halves of china bowls, cracked tumblers, broken wineglasses, tops of teapots, and stoppers of departed decanters. I say, I took a view of the dirt and devastation my philosophic husband had occasioned; and there I sat, like Patience on a monument, smiling at grief; but it worked inwardly. I would almost as soon the melted rosin and vitriol had been in his throat, as on my dear marble hearth, and my beautiful carpet. It is not true that women have no power over their own feelings; for notwithstanding this provocation, I said nothing, or next to nothing; for I only observed, very pleasantly, what a lady of my acquaintance had told me, that the reason why philosophers are called *literary* men, is because they make a great *litter*: not a word more; however, the servant cleared it away, and down sat the philosopher. A friend dropt in soon after—"Your servant, Sir, how do you do?" "O Lord! I am almost fatigued to death; I have been all the morning making philosophical experiments." I was now more hardly put to it to smother a laugh, than I had been just before to contain my rage; my *precious* went out soon after, and I, as you may suppose, mustered all my forces; brushes, buckets, soap, sand, limeskins, and cocoanut shells, with all the powers of housewifery, were immediately employed. I was

certainly the best philosopher of the two; for my experiments succeeded, and his did not. All was well again except my poor carpet—my vitriolized carpet, which still continued a mournful memento of philosophic fury, or rather philosophic folly. The operation was scarce over, when, in came my experimental philosopher, and told me, with all the indifference in the world, that he had invited six gentlemen to dine with him at three o'clock. It was then past one. I complained of the short notice, "Poh! poh!" said he, "you can get a leg of mutton, and a loin of veal, and a few potatoes, which will do well enough." Heaven! what a chaos must the head of a philosopher be! a leg of mutton, a loin of veal, and potatoes! I was at loss whether I should laugh or be angry; but there was no time for determining: I had but an hour and a half to do a world of business in. My carpet, which had suffered in the cause of experimental philosophy in the morning, was destined to be most shamefully dishonored in the afternoon by a deluge of nasty tobacco juice. Gentlemen smokers love segars better than carpets. Think, Sir, what a women must endure under such circumstances; and then, after all, to be reproached with her cleanliness, and to have her white-washings, her scourings, and scrubbing, made the subject of ridicule; it is more than patience can put up with. What I have now exhibited, is but a small specimen of the injuries we sustain from the boasted superiority of men. But we will not be laughed out of our cleanliness. A woman would rather be called any thing than a slut, as a man would rather be thought a knave than a fool. I had a great deal more to say, but am called away; we are just preparing to white-wash, and of course I have a deal of business on my hands. The white-wash buckets are paraded, the brushes are ready, my husband is gone off—so much the better; when we are upon a thorough cleaning, the first dirty thing to be removed, is one's husband. I am called for again. Adieu.

FINAL SPEECH OF DR. FRANKLIN

IN THE LATE FEDERAL CONVENTION.*

MR. PRESIDENT :

I confess that I do not entirely approve of this constitution at present ; but, Sir, I am not sure I shall never approve it ; for having lived long, I have experienced many instances of being obliged, by better information, or fuller consideration, to change opinions even on important subjects, which I once thought right, but found to be otherwise. It is, therefore, that the older I grow, the more apt I am to doubt my own judgment and to pay more respect to the judgment of others.

Most men, indeed, as well as most sects in religion, think themselves in possession of all truth, and that whenever others differ from them, it is so far error. Steele, a Protestant, in a dedication, tells the Pope, that, "the only difference between our two churches, in their opinions of the certainty of their doctrines, is, the Romish church is infallible, and the church of England never in the wrong." But, though many private persons think almost as highly of their own infallibility as that of their sect, few express it so naturally as a certain French lady, who, in a little dispute with her sister, said, "I don't know how it happens, sister, but I meet with nobody but myself that is always in the right." *Il n'y a que moi qui a toujours raison.* In these sentiments, sir, I agree to this constitution, with all its faults, if they are such ; because I think a general government necessary for us, and there is no form of government but what may be a blessing, if well administered ; and I believe, farther, that this is likely to be well administered for a course of years, and can only end in despotism, as

* Our reasons for ascribing this speech to Dr. Franklin, are its internal evidence, and its having appeared with his name, during his lifetime uncontradicted, in an American periodical publication.

other forms have done before it, when the people shall become so corrupted as to need despotic government, being incapable of any other. I doubt, too, whether any other convention we can obtain may be able to make a better constitution: for when you assemble a number of men, to have the advantage of their joint wisdom, you inevitably assemble with those men all their prejudices, their passions, their errors of opinion, their local interests, and their selfish views. From such an assembly can a perfect production be expected? It therefore astonishes me, sir, to find this system approaching so near to perfection as it does; and I think it will astonish our enemies, who are waiting, with confidence, to hear that our councils are confounded, like those of the builders of Babel, and that our states are on the point of separation, only to meet hereafter for the purpose of cutting each other's throats.

Thus I consent, sir, to this constitution, because I expect no better, and because I am not sure that this is not the best. The opinions I have had of its errors I sacrifice to the public good. I have never whispered a syllable of them abroad. Within these walls they were born, and here they shall die. If every one of us, in returning to our constituents, were to report the objections he has had to it, and endeavor to gain partisans in support of them, we might prevent its being generally received, and thereby lose all the salutary effects and great advantages resulting naturally in our favor among foreign nations, as well as among ourselves, from our real or apparent unanimity. Much of the strength and efficiency of any government, in procuring and securing happiness to the people, depends on opinion; on the general opinion of the goodness of that government, as well as of the wisdom and integrity of its governors.

I hope, therefore, that for our own sakes, as a part of the people, and for the sake of our posterity, we shall act heartily and unanimously in recommending this constitution, wherever our influence may extend,

and turn our future thoughts and endeavors to the means of having it well administered.

On the whole, sir, I cannot help expressing a wish, that every member of the convention, who may still have objections, would with me, on this occasion, doubt a little of his own infallibility, and to make manifest our unanimity, put his name to this instrument.

[The motion was then made for adding the last formula, viz :

“Done in Convention, by the unanimous consent,” &c. which was agreed to, and added accordingly.]

P*

EXTRACTS

FROM THE LAST WILL AND TESTAMENT OF DR. FRANKLIN.

WITH regard to my books, those I had in France, and those I left in Philadelphia, being now assembled together here, and a catalogue made of them, it is my intention to dispose of the same as follows :

My "History of the Academy of Sciences," in sixty or seventy volumes quarto, I give to the Philosophical Society of Philadelphia, of which I have the honor to be president. My collection in folio of "Les Arts et les Métiers," I give to the American Philosophical Society established in New England, of which I am a member. My quarto edition of the same, "Arts et Métiers," I give to the Library Company of Philadelphia. Such and so many of my books as I shall mark, in the said catalogue, with the name of my grandson, Benjamin Franklin Bache, I do hereby give to him; and such and so many of my books as I shall mark, in the said catalogue, with the name of my grandson William Bache, I do hereby give to him: and such as shall be marked with the name of Jonathan Williams, I hereby give to my cousin of that name. The residue and remainder of all my books, manuscripts, and papers, I do give to my grandson William Temple Franklin. My share in the Library Company of Philadelphia, I give to my grandson, Benjamin Franklin Bache, confiding that he will permit his brothers and sisters to share in the use of it.

I was born in Boston, New England, and owe my first instructions in literature to the free grammar schools established there. I therefore give one hundred pounds sterling to my executors, to be by them, the survivors or survivor of them, paid over to the managers or directors of the free schools in my native

town of Boston, to be by them, or the person or persons who shall have the superintendence and management of the said schools, put out to interest, and so continued at interest forever; which interest annually shall be laid out in silver medals, and given as honorary rewards annually, by the directors of the said free schools, for the encouragement of scholarship in the said schools, belonging to the said town, in such manner as to the discretion of the selectmen of the said town shall seem meet.

Out of the salary that may remain due to me, as president of the state, I give the sum of two thousand pounds to my executors, to be by them, the survivors or survivor of them, paid over to such person or persons as the legislature of the state, by an act of assembly, shall appoint to receive the same in trust, to be employed for making the Schuylkill navigable.

During the number of years I was in business as a stationer, printer, and postmaster, a great many small sums became due to me, for books, advertisements, postages of letters, and other matters, which were not collected, when, in 1757, I was sent by the Assembly to England as their agent—and, by subsequent appointments, continued there until 1775—when, on my return, I was immediately engaged in the affairs of Congress, and sent to France in 1776, where I remained nine years, not returning till 1785; and the said debts not being demanded in such a length of time, have become in a matter obsolete, yet are nevertheless justly due.—These, as they are stated in my great folio Ledger E, I bequeath to the contributors of the Pennsylvania Hospital, hoping that those debtors, and the descendants of such as are deceased, who now, as I find, make some difficulty of satisfying such antiquated demands as just debts, may, however, be induced to pay or give them as charity to that excellent institution. I am sensible that much must be inevitably lost; but I hope something considerable may be recovered. It is possible, too, that some of the parties charged may have existing old unsettled

accounts against me: in which case the managers of the said hospital will allow and deduct the amount, or pay the balance, if they find it against me.

I request my friends, Henry Hill, Esq. John Jay, Esq. Francis Hopkinson, and Mr. Edward Duffield, of Bonfield, in Philadelphia county, to be the executors of this my last will and testament, and I hereby nominate and appoint them for that purpose.

I would have my body buried with as little expense or ceremony as may be.

PHILADELPHIA, MAY 17, 1778.

CODICIL.

I, BENJAMIN FRANKLIN, in the foregoing or annexed last will and testament, having further considered the same, do think proper to make and publish the following codicil, or addition thereto.

It having long been a fixed and political opinion of mine, that in a democratical state there ought to be no offices of profit, for the reasons I have given in an article of my drawing in our constitution, it was my intention, when I accepted the office of president, to devote the appointed salary to some public use: accordingly I had already, before I made my last will in July last, given large sums of it to colleges, schools, building of churches, &c. and in that will I bequeathed two thousand pounds more to the state, for the purpose of making the Schuylkill navigable; but understanding since that such a sum would do but little toward accomplishing such a work, and that the project is not likely to be undertaken for many years to come—and having entertained another idea, which I hope may be more extensively useful, I do hereby revoke and annul the bequest, and direct that the certificates I have for what remains due to me of

that salary, be sold toward raising the sum of two thousand pounds sterling, to be disposed of as I am now about to order.

It has been an opinion, that he who receives an estate from his ancestors, is under some obligation to transmit the same to posterity. This obligation lies not on me, who never inherited a shilling from any ancestor or relation. I shall, however, if it is not diminished by some accident before my death, leave a considerable estate among my descendants and relations. The above observation is made merely as some apology to my family, for my making bequests that do not appear to have any immediate relation to their advantage.

I was born in Boston, New England, and owe my first instructions in literature to the free grammar schools established there. I have therefore considered those schools in my will.

But I am also under obligations to the state of Massachusetts, for having, unasked, appointed me formerly their agent, with a handsome salary, which continued some years, and, although I accidentally lost in their service, by transmitting Governor Hutchinson's letters, much more than the amount of what they gave me, I do not think that ought in the least to diminish my gratitude. I have considered that among artisans, good apprentices are most likely to make good citizens; and having myself been bred to a manual art, printing, in my native town, and afterward assisted to set up my business in Philadelphia by kind loans of money from two friends there, which was the foundation of my fortune, and of all the utility in life that may be ascribed to me—I wish to be useful even after my death, if possible, in forming and advancing other young men that may be serviceable to their country in both these towns.

To this end I devote two thousand pounds sterling, which I give, one thousand thereof to the inhabitants of the town of Boston, in Massachusetts, and the other thousand to the inhabitants of the city of Philadelphia,

in trust, to and for the uses, intents, and purposes hereinafter mentioned and declared.

The said sum of one thousand pounds sterling, if accepted by the inhabitants of the town of Boston, shall be managed under the direction of the selectmen, united with the ministers of the oldest Episcopalian, Congregational, and Presbyterian churches in that town, who are to let out the same upon interest at five per cent. per annum, to such young married artificers, under the age of twenty-five years, as have served an apprenticeship in the said town, and faithfully fulfilled the duties required in their indentures, so as to obtain a good moral character from at least two respectable citizens, who are willing to become sureties, in a bond with the applicants, for the repayment of the money so lent, with the interest, according to the terms hereinafter prescribed; all which bonds are to be taken for Spanish milled dollars, or the value thereof in current gold coin: and the manager shall keep a bound book, or books, wherein shall be entered the names of those who shall apply for and receive the benefit of this institution, and of their sureties, together with the sums lent, the dates, and other necessary and proper records respecting the business and concerns of this institution: and as these loans are intended to assist young married artificers in setting up their business, they are to be proportioned by the discretion of the managers, so as not to exceed sixty pounds sterling to one person, nor to be less than fifteen pounds.

And if the number of appliers so entitled should be so large as that the sum will not suffice to afford to every one some assistance, these aids may therefore be small at first, but as the capital increases by the accumulated interest, they will be more ample. And in order to serve as many as possible in their turn, as well as to make the repayment of the principal borrowed more easy, each borrower shall be obliged to pay with the yearly interest one tenth part of the principal; which sums of principal and interest so paid in, shall be again let out to fresh borrowers.

And it is presumed, that there will always be found in Boston virtuous and benevolent citizens, willing to bestow a part of their time in doing good to the rising generation, by superintending and managing this institution gratis; it is hoped, that no part of the money will at any time lie dead, or be diverted to other purposes, but be continually augmenting by the interest, in which case there may in time be more than the occasion in Boston shall require; and then some may be spared to the neighboring or other towns in the said state of Massachusetts, which may desire to have it, such towns engaging to pay punctually the interest, and the proportions of the principal annually, to the inhabitants of the town of Boston. If this plan is executed and succeeds, as projected, without interruption for one hundred years, the sum will be then one hundred and thirty-one thousand pounds; of which I would have the managers of the donation to the town of Boston then lay out, at their discretion, one hundred thousand pounds in public works, which may be judged of most general utility to the inhabitants: such as fortifications, bridges, aqueducts, public buildings, baths, pavements, or whatever may make living in the town more convenient to its people, and render it more agreeable to strangers resorting thither for health, or a temporary residence. The remaining thirty-one thousand pounds I would have continued to be let out at interest, in the manner above directed, for one hundred years; as I hope it will have been found, that the institution has had a good effect on the conduct of youth, and been of service to many worthy characters and useful citizens. At the end of this second term, if no unfortunate accident has prevented the operation, the sum will be four millions and sixty-one thousand pounds sterling, of which I leave one million and sixty-one thousand pounds to the disposition and management of the inhabitants of the town of Boston, and three millions to the disposition of the government of the state; not presuming to carry my views farther.

All the directions herein given respecting the disposition and management of the donation to the inhabitants of Boston, I would have observed respecting that to the inhabitants of Philadelphia; only as Philadelphia is incorporated, I request the corporation of that city to undertake the management, agreeable to the said directions: and I do hereby vest them with full and ample powers for that purpose. And having considered that the covering its ground plat with buildings and pavements, which carry off most rain, and prevent its soaking into the earth, and renewing and purifying the springs, whence the water of the wells must gradually grow worse, and in time be unfit for use, as I find has happened in all old cities; I recommend, that, at the end of the first hundred years, if not done before, the corporation of the city employ a part of the hundred thousand pounds in bringing by pipes the water of Wissahickon creek into the town, so as to supply the inhabitants; which I apprehend may be done without great difficulty, the level of that creek being much above that of the city, and may be made higher by a dam. I also recommend making the Schuylkill completely navigable.

At the end of the second hundred years, I would have the disposition of the four millions and sixty-one thousand pounds divided between the inhabitants of the city of Philadelphia and the government of Pennsylvania, in the same manner as herein directed with respect to that of the inhabitants of Boston and the government of Massachusetts. It is my desire that this institution should take place, and begin to operate within one year after my decease: for which purpose, due notice should be publicly given, previous to the expiration of that year, that those for whose benefit this establishment is intended may make their respective applications; and I hereby direct my executors, the survivors or survivor of them, within six months after my decease, to pay over the said sum of two thousand pounds sterling to such persons as shall be duly appointed by the selectmen of Boston, and the

corporation of Philadelphia, and to receive and take charge of their respective sums of one thousand pounds each for the purpose aforesaid. Considering the accident to which all human affairs and projects are subject in such a length of time, I have perhaps too much flattered myself with a vain fancy, that these dispositions, if carried into execution, will be continued without interruption, and have the effects proposed; I hope, however, that if the inhabitants of the two cities should not think fit to undertake the execution, they will at least accept the offer of these donations, as a mark of my good will, token of gratitude, and testimony of my desire to be useful to them even after my departure. I wish, indeed, that they may both undertake to endeavor the execution of my project, because, I think, that though unforeseen difficulties may arise, expedients will be found to remove them, and the scheme be found practicable. If one of them accepts the money with the conditions, and the other refuses, my will then is, that both sums be given to the inhabitants of the city accepting; the whole to be applied to the same purposes, and under the same regulations directed for the separate parts; and if both refuse, the money remains of course in the mass of my estates, and is to be disposed of therewith, according to my will, made the seventeenth day of July, 1788.

My fine crab-tree walking stick, with a gold head, curiously wrought in the form of the cap of liberty, I give to my friend, and the friend of mankind, General Washington. If it were a sceptre, he has merited it, and would become it.

THE END.

GREAT AMERICAN BIOGRAPHY!

WEBSTER

AND

HIS MASTER-PIECES.

His Life and Great Speeches.

BY B. F. TEFFT, D. D., LL. D.

Steel Portrait, Two Volumes, 1032 pp. 12mo. Price, \$2 50.

We receive these volumes with especial satisfaction. Dr. Tefft's book, we doubt not, will be a popular one. It has that brilliancy of touch and that vivacity of style which are always popular with the great body of readers.—*Boston Traveler*.

Such a life of the great statesman was needed. There is no other as cheap yet elegant form in which Webster's great efforts are to be found. They will sell well, we doubt not. The more of them there are distributed, the better it is for our intelligence, our political virtue and the public weal.—*N. Y. Times*.

Dr. Tefft has displayed much industry, versatility and discrimination in his biography, and good taste in the selection of Mr. Webster's efforts, and these volumes cannot but meet with a favorable reception from the public.—*Boston Atlas*.

There is no doubt but the book will be very generally sought and read by an appreciating public. It must be regarded as a valuable addition to the standard literary works of the times. The author is exceedingly happy in his use of language. There is nothing laborious, dull or difficult in the perusal; but on the contrary, it possesses an affable, congenial spirit which is entirely winning. We have been peculiarly interested with the description of Mr. Webster's character contained in the last chapter of the biography. The author enters into the subject with his whole soul, delineating faithfully those traits peculiar to the man, expanding upon those qualities of mind which constituted his greatness. The work is handsomely got up, and is fit to adorn any library.—*Buffalo Rep.*

We doubt whether a better biography will ever meet the eyes of the student, or enrich the library of the man of letters. The style is polished, clear, and interesting in a high degree.—*Boston Eve. Gazette*.

The best life of Webster that has ever appeared.—*Buffalo Democracy*.

T H E L I F E
OF
GEN. WILLIAM H. HARRISON,
Ninth President of the United States.

BY H. MONTGOMERY.

Steel Portrait, 465 pp. 12mo., Muslin. Price \$1 25.

"The Hero came—a noble, good old man,
Strong in the wealth of his high purposes.
Age sat upon him with a gentle grace,
Giving unto his manhood dignity;
Imbuing it with pure and lofty thoughts,
As pictures owe their mellow hues to time,
He stood before the people. Theirs had been
The vigor of his youth, his manhood's strength;
And now his green old age was yielded up,
To answer their behests."

In the long and brilliant list of those whose memories we delight to honor and to cherish, WILLIAM HENRY HARRISON deservedly occupies a prominent place. Stimulated by the example of the patriot whose name he bore, and whose blood coursed in his veins; endowed with superior talents, and occupying a large field of usefulness and distinction, he had the power, and well did he exert it, of contributing largely to our national glory and eminence.

L I F E O F G E N . Z A C H A R Y T A Y L O R ,
Twelfth President of the United States.

BY H. MONTGOMERY.

Steel Portrait, and other Illustrations, 463 pp. 12mo., Price \$1 25.

"As calm in the council, as gallant in war,
He fought for his country, and not its 'hurrah!'"

The man to do the right thing at the right time; the man who would not leave his wounded behind him, and would have encountered any personal hazard or sacrifice to abide by that which his heart told him was right; the man quiet in expression, strong in action, firm in purpose; and whether in expression, action or purpose, that transparent honesty and simple integrity forming, as it were, the atmosphere in which he lived and moved—which so happily for himself and for us not only enabled him to see clearly and do resolutely what became a true and brave man, but enabled the world to see how bravely and how honestly it was done. A rare gift! Let us honor it; and above all, let us try to learn a lesson from it.

MILLER, ORTON & MULLIGAN, *Publishers,*

SUFFERINGS OF THE ENGLISH POOR,
OR THE
WHITE SLAVES OF ENGLAND.

AN

EXPOSITION OF THE CONDITION AND TREATMENT OF THE LABORING
CLASSES IN THE FACTORIES AND COAL MINES OF GREAT BRITAIN.

BY JOHN C. COBDEN.

One Volume, 500 pp., 12mo., 11 Illustrations. Price, \$1 25.

NOTICES OF THE PRESS—BRIEF EXTRACTS.

The author has gone extensively into detail—wielding an honest and fearless pen, and backing his weighty statements by copious extracts from the official records of England. He has made a glorious book.—*Buffalo Express*.

But for the evidence by which the author's assertions are sustained, we would not dare credit the distressing accounts of indigence and misery.—*Waverly Magazine*.

It is a capital book, and entitled to a place in every man's library.—*N. Y. Mirror*.

The "White Slaves of England" are displayed here, in a condition that must touch the heart of every philanthropist, and bring tears to eyes "unused to weep."—*Phil. Amer. Cour.*

We predict for the work just what it deserves—a wide spread circulation.—*Dutchman*.

It contains much interesting and valuable information, and we doubt not that it will find many readers.—*Chicago Evangelist*.

It unfolds degradation and wrong, such as the mind of man, unaided, could scarce imagine.—*N. Y. Sun*.

To those unacquainted with these portions of the English social system here bared to the public, the revelations will be regarded with wonder—perhaps with horror.—*Rochester Advertiser*.

We confess that the revelations here made are perfectly appalling.—*Utica Herald*.

We have it all, hopeless servitude, ignorance, and cruelty, aye more, in proud, philanthropic, enlightened England—all this degradation, slavery, cruelty, and woe—the subjects of which are white men, white women, and white children—the same race and blood as their oppressors.—*Syracuse Star*.

The Coal Miners, the Needlewomen, the Coolies, the Factories, and the Press Gangs are each described in turn. Volume after volume of romance has been written, and day after day spent in debate, upon these topics, but we doubt if they ever have been so fully represented before, in all their length and breath. Its scenes are pictures from real life.—*Albany Evening Journal*.

Some of the more exciting descriptions are illustrated by spirited wood engravings, though this is hardly needed, for more revolting pictures of degraded humanity than the author has sketched, no one need desire to read.—*Dollar Newspaper*.

MILLER, ORTON & MULLIGAN, *Publishers*,

25 Park Row, NEW YORK, and 107 Genesee-st., Auburn.

THE LIFE OF LOUIS KOSSUTH,

GOVERNOR OF HUNGARY; INCLUDING NOTICES OF THE MEN AND SCENES OF THE HUNGARIAN REVOLUTION: TO WHICH IS ADDED AN APPENDIX, CONTAINING HIS PRINCIPAL SPEECHES, &c. WITH AN INTRODUCTION BY HORACE GREELEY. BY P. C. HEADLEY.

"What an age! A great man steps upon our shores—the fact is telegraphed in an instant to every city in the Union. He speaks—immediately a thousand newspapers carry his words to every house in the land. While he is yet speaking, some rapid writer sketches the history of his life, and the press—prone to miracles—scatters in beautiful volumes, both *Life and Speeches* through all the country. Mr. Headley has written an excellent memoir of Kossuth. It details, in easy, perspicuous narrative, the principal events of his life, bringing down the history almost to the present hour."—*N. C. Advocate*.

"This volume, containing a full biography of the noble Hungarian from his birth to the present time, with copious notices of the revolutionary movement, is a seasonable and interesting publication. It will be read by great numbers, whose interest in Kossuth's career has been awakened by his presence in this country; and it cannot be read without profit. The principal events in his life are related with sufficient minuteness; numerous anecdotes are introduced, illustrative of his character; and brief comments made on the progress of his history. The course of the Hungarian Revolution is described with clearness and accuracy, correcting many prevalent errors on the subject, and presenting a comprehensive view of the principles involved in that patriotic struggle."—*New York Tribune*.

"In no part of this composition does the author betray an appearance of carelessness or imperfection yet it is a wonder among the world of critics, how Headley can write so much, and write nothing that is incomplete. His power to give his writings a clearness and vivacity of style, has already obtained for him a reputation that will ever secure for him a passport with the illustrious in the world of letters. And in this instance he has a theme that is happily adapted to his style of composition. The life and character of the 'political Luther of Europe,' furnishes ample material for his brilliant and discriminating genius, and he seems to have spared no pains to make his book worthy of both the theme and the author."—*G. M. Aegis*.

"It is written in an eager, animated style, adapted for the special purpose of the book. It is reliable and exceedingly interesting. A brief introduction by Mr. Greeley pitches the key-note of the volume, and will find a response, we doubt not, in the popular heart."—*New York Organ*.

THE LIFE
OF
REV. ADONIRAM JUDSON,
Of the Burman Mission.

BY JESSE CLEMENT.

Steel Portrait, 336 Pages 12mo. Price \$1 00.

Dr. Judson's firmness and elevation of principle, expansive conceptions of christian duty, simplicity, and inflexibility of faith, and fervor and enthusiasm of piety, are apparent in the portions of his journal and letters which we have inserted; and his practical judgment, strong executive capacities, untiring patience, and profound philological and other literary attainments, are exhibited in the nature, amount, and excellence of his labors, at which this work repeatedly hints. If there is any one trait which is not developed in the following pages, it is benevolence. Much of it, however, is implied in the fact, that he gave thirty-eight years of manly toil for the redemption of a people who robbed him under the veil of taxes cruelly levied, loaded him with fetters, cast him into dungeons and death-prisons, drove him bare-footed over burning sands, and, finally, to bar him from the heart of the empire and from the "golden presence," swung against his philanthropic heart the iron gates of intolerance. But he gave more than his days to the cause of Missions—more than his comforts a martyr to persecution: about fifteen hundred dollars received for the memoir of his second wife, and between four and five thousand dollars presented as a reward for his services as interpreter during the English and Burman war, were put into the treasury of the Lord.

OPINIONS OF REVIEWERS.

This is a valuable memoir of one of the noblest of men that ever lived. Few lives present greater moral heroism than the life of Dr. Judson. He was the founder of East India Missions, so far as the Baptist Church of this country is concerned. Mr. Clement has executed his task with decided ability. The narrative is at all times clear and well sustained, and occasionally is very affecting. The first half of the twentieth chapter cannot be read without deep emotion. The work is beautifully printed, and merits an extensive sale.—*Christian Advocate*.

The biography of a noble missionary hero, who lived long, and worked faithfully to the last, in behalf of the heathen. The record of his toils and sufferings, his faith and hope, his trials and his successes, cannot fail to awaken or deepen a genuine missionary spirit in Christian hearts. To such as have only heard, in general, of Dr. Judson, this volume will give the interesting particulars of his life; and in the minds of those who knew him, it will awaken many favorable recollections.—*Zion's Herald*.

Mr. Clement's work clearly and unobtrusively sketches the history of Dr. Judson's missionary career, and supplies, to the ordinary reader, a connected view of his labors, which could not elsewhere be found. It is written with simplicity, and a proper admiration of Dr. Judson's character; and presents a great variety of interesting documents and letters that ought not to be forgotten. It is a very animated and impressive work, and will tend not only to prepare the reader for an appreciation of a more complete biography, but give a new and admiring confidence in the cause of missions, and the power of divine grace.—*New York Evangelist*.

MAGNIFICENT WORK OF HISTORY.

A Whole Library in Itself!

Cost \$11,000—1207 Pages—70 Maps—700 Engravings.

A

HISTORY OF ALL NATIONS,

FROM THE EARLIEST PERIOD TO THE PRESENT TIME;

OR,

UNIVERSAL HISTORY;

IN WHICH THE

HISTORY OF EVERY NATION, ANCIENT AND MODERN,

IS SEPARATELY GIVEN.

BY S. G. GOODRICH,

Consul to Paris, and Author of several Works of History, Parley's Tales, &c.

It contains 1207 pages, royal octavo, and is illustrated by 70 Maps and 700 Engravings:
bound in imitation Turkey morocco.

Invariable retail price, \$6,00 in one volume; \$7,00 in two volumes.

The same, full gilt edge and sides, \$8,00 in one volume; \$10,00 in two vols.

. It is believed that the above work, by Mr. Goodrich, will be very acceptable to the American public. It is the result of years of toil and labor, assisted in his researches by several scholars of known ability, and has been gotten up at a great expense by the proprietors. No pains have been spared in the execution of the Illustrations and Maps, which are entirely new, and prepared by the distinguished author expressly for the work. Indeed, all the other historical writings of Mr. Goodrich sink into insignificance, when compared with this, the result of his riper and maturer years. It is admitted that *One Hundred Dollars* could not purchase the same matter in any other shape: and the publishers confidently expect that, in consideration of the great literary value of the work, the large sum expended in preparing it for the press, and the exceedingly moderate price at which it is offered, that it will be favorably received by every lover of good books.
